1 W. KIP VISCUSI, a witness called on  
2 behalf of the plaintiff, first having been duly  
3 sworn, on oath deposes and says as follows:  
4

5 EXAMINATION BY MR. GRUENLOH:

6 Q. Doctor Viscusi, we met prior to the  
7 deposition. I'm Mike Gruenloh with the firm of

8       Ness, Motley in Charleston, South Carolina, and  
9       I represent the State of Washington in this  
10       case. I understand that you have been deposed  
11       many times before, including four attorney  
12       general actions prior to this one; is that  
13       correct?

14       A.     That's correct.

15       Q.     What actions were those? What cases  
16       were those?

17       A.     Mississippi, Florida, Minnesota and  
18       Texas.

19       Q.     That's it? No others?

20       A.     No other state cases.

21       Q.     I think I have read all those  
22       depositions, so to the extent I can, I will try  
23       to stay away from material that we you already  
24       covered, but bear with me. A lot of this is  
25       going to be old to you, I'm afraid.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

5

1       A.     Good.

2       Q.     We will try to keep it as new as  
3       possible. It's not my intention to try and  
4       trick you or deceive you with any of my  
5       questions. This is a discovery deposition. I  
6       am here to find out what your opinions are, so  
7       it does me no good to try to deceive you with my  
8       questions. If any of my questions are ambiguous  
9       or you don't understand, let me know and I will  
10       go back over the question.

11                   Your counsel today is entitled to  
12       make objections to the form of my questions.  
13       You are going to need to answer my questions,  
14       regardless of those objections. So do your best  
15       to listen to my question because you are going  
16       to have to answer unless counsel directs you not  
17       to answer the question. If you need a break at  
18       any time, let me know, because I want you to be  
19       comfortable. Okay?

20           A.     Okay.

21           Q.     Any questions?

22           A.     No.

23           Q.     Can you state your full name for the  
24       record?

25           A.     William Kip Viscusi. The W stands for

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

6

1       William.

2           Q.     Is Kip short for something?

3           A.     I was born on Yom Kippur, and that's  
4       how I picked up Kip.

5           Q.     Do you still teach at Harvard?

6           A.     Yes.

7           Q.     Is it Harvard Law School?

8           A.     Yes.

9           Q.     What courses do you teach there?

10          A.     The economics of regulation and  
11       antitrust, empirical analysis for lawyers. I  
12       forget the exact title. Risk and environmental

13 regulation, and treatment of scientific evidence  
14 in the courts.

15 Q. So that's four courses?

16 A. Two courses, two seminars.

17 Q. Can you just tell me briefly the  
18 subject matter that you cover? Start with the  
19 first one.

20 A. Regulation and antitrust would cover  
21 the objectives of government regulation. I do  
22 risk and environmental regulation, antitrust,  
23 economics of regulation, utility regulation, so  
24 the whole sweep of all government regulations.

25 The empirical analysis course is

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

7

1 essentially statistical and econometric methods  
2 for use by lawyers.

3 Q. Econometrics for use by lawyers?

4 A. Well, in the courtroom you may have  
5 statistical analyses that use econometrics, how  
6 would you judge such analyses, and in the class  
7 many times they actually prepare papers using  
8 econometrics.

9 Q. And the third?

10 A. Risk and environmental regulations  
11 focuses on health, safety and environmental  
12 regulation by the federal government, such as  
13 job safety regulation, environmental  
14 regulation. And the fourth course, judging  
15 scientific evidence focuses primarily on how

16 risk issues are treated in the courts and in the  
17 government regulatory context, everything from  
18 breast implants to auto safety. And cigarette  
19 smoking shows up in all four courses.

20 Q. You said the fourth deals with risk?

21 A. Right. Well. Judging risk, whereas  
22 all of them deal with risk to some extent. It  
23 shows up in all of my courses.

24 Q. But more so in the fourth?

25 A. The one called risk and environmental

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

8

1 regulation is right on target, as well.

2 Q. Tell me again what subjects do you --  
3 you mentioned the EPA. What else do you cover  
4 in that fourth course?

5 A. Judging treatment of scientific  
6 evidence.

7 Q. The risk course?

8 A. Risk and environmental regulation.

9 Q. Risk and environmental?

10 A. That would include risk analysis, risk  
11 perception, market poll procedures that handle  
12 risk, how consumers make decisions with respect  
13 to risk, the value of life, government  
14 regulation of risk, the performance of  
15 government risk regulations. And then  
16 substantively everything from hazardous waste  
17 sites to food safety to highway safety. It's a

18 broad coverage within that set of topics.

19 Q. On the second course that you told me

20 about, the one dealing with econometrics, do you

21 have a course outline on that?

22 A. I have a course reading list, yes.

23 Q. Is that something that you could

24 provide to us, or have you? That's two

25 questions. Have you provided it to us?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

9

1 A. I provided it in some cases. I'm not

2 sure which ones. But that's something that can

3 be provided.

4 MR. GRUENLOH: I don't remember

5 getting that, Tim. Can you check on that?

6 THE WITNESS: I'm not sure I gave --

7 nobody has asked me for it recently.

8 Q. The econometrics course, I would like

9 to look at that course outline, if you could get

10 that for us.

11 A. Sure.

12 MR. ATKESON: Sure.

13 Q. Does that course on econometrics

14 involve smoking at all?

15 A. Yes.

16 Q. How so?

17 A. As part of the statistical analysis, I

18 also present "The Social Consequences of

19 Cigarette Smoking" article. I also talk about

20 the risk perception analysis that I have done.

21 So not everything I do in the course shows up in  
22 the reading list, but that's part of what I do.

23 Q. How long have you been teaching at  
24 Harvard?

25 A. Well, I have had a permanent position

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

10

1 there for two years. Before that I was a  
2 visiting professor for one semester, and back,  
3 way back, I was an instructor. But that's  
4 before I completed my Ph.D.

5 Q. After you completed your Ph.D., how  
6 many years have you been teaching at Harvard?

7 A. Two years permanently, plus another  
8 semester. So I'm starting the third full year  
9 in September.

10 Q. Have you taught other courses besides  
11 the ones you are teaching right now at Harvard?

12 A. No.

13 Q. These are the four that you have stayed  
14 with for your entire time at Harvard Law School?

15 A. Right, that's correct.

16 Q. You received all of your academic  
17 degrees from Harvard; is that correct?

18 A. That's correct.

19 Q. Can you tell me briefly what those are?

20 A. Bachelor's degree in economics, a  
21 master's in public policy, master's in  
22 economics, a Ph.D. in economics.

23 Q. After you got your Ph.D., what was your

24 first teaching job?

25 A. Northwestern.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

11

1 Q. What did you teach there?

2 A. Economics.

3 Q. What year was that?

4 A. 1976.

5 Q. Anything else besides economics?

6 A. No. I was in the economics department,  
7 so I taught lots of different economics courses.

8 Q. You can't remember what they were?

9 A. One was labor economics,  
10 undergraduate. One was labor economics,  
11 graduate. I also taught a public policy  
12 analysis class. I'm not sure what else. When I  
13 came back to Northwestern later, I taught  
14 statute law and economics, but that was my  
15 second stint there.

16 Q. When was that?

17 A. Around 1985.

18 Q. How long were you at Northwestern the  
19 first time, 1976 until when?

20 A. I went on leave to work for the federal  
21 government in 1979, the fall of 1979.

22 Q. And what did you do there? For what  
23 branch of the government did you work?

24 A. The Executive Office of the President.  
25 So I was the deputy director of the President's

1 Council on Wage and Price Stability.

2 Q. How long did you work there?

3 A. Until President Reagan became president  
4 in January 1991.

5 MR. ATKESON: '81.

6 A. I'm sorry. Time flies.

7 Q. After that, what did you do?

8 A. I spent the spring semester and the  
9 summer as a research associate of the National  
10 Commission for Employment Policy, and then that  
11 fall I went to Duke University as a professor,  
12 housed primarily in the business school, but I  
13 also ran a regulations center and had joint  
14 appointments in a number of other places there.

15 Q. What year was that?

16 A. I would guess 1981.

17 Q. 1981 till when were you at Duke?

18 A. I would have to look this up, but I  
19 think around 1985, roughly, I went to live in  
20 Chicago, and I was a visiting professor at the  
21 University of Chicago. But at the same time I  
22 was signed on as a full professor at the  
23 Northwestern economics department.

24 Q. What did you teach at Duke?

25 A. That was Northwestern.

1 Q. Back at Duke, what did you teach at  
2 Duke?

3 A. Back at Duke I was teaching regulation  
4 and microeconomics, and I'm not sure what else.  
5 Public policy, one semester I taught public  
6 policy analysis for the public policy school  
7 there. Another semester I taught in the medical  
8 school. They had -- I taught a course on health  
9 -- their health administration program.

10 Q. Do you consider yourself a public  
11 policy analyst?

12 A. I have done public policy analysis and  
13 have a degree in it. I consider myself more a  
14 professor rather than a staff person in an  
15 agency.

16 Q. If someone asked you if you were  
17 qualified to be a public policy analyst, say,  
18 for instance, on a staff of some government  
19 board, what would your answer be?

20 A. It depends on the policy context. I'm  
21 not going to analyze whether we should bomb  
22 Sudan. But domestic policy is the kind of thing  
23 that we did for the Carter administration as  
24 part of my job.

25 Q. So it's important to have knowledge of

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 the subject matter of the policy before you can

2       become a policy analyst in that subject?

3                   MR. ATKESON:   Are you asking  
4       generally?

5                   MR. GRUENLOH:   Yes.

6       A.       It depends on the context.   If you are  
7       talking about judging, well, let's say a  
8       statistical analysis of, let's say, the bombing  
9       in Sudan, I could judge statistical work.   But  
10      if you are asking me to second-guess the factual  
11      underpinnings of the analysis, I wouldn't  
12      second-guess the factual underpinnings unless I  
13      knew something about the area.

14      Q.       Well, you just said, if somebody came  
15      to you and asked you to be a policy analyst on  
16      bombing in Sudan, you wouldn't consider yourself  
17      qualified to do that.   Isn't that what you said?

18      A.       I wouldn't want to do it because  
19      generally when I do things, if I were to be  
20      working for the agency, I would want to actually  
21      learn something about the subject matter area of  
22      it.   If I'm going to do an analysis from start  
23      to finish, I want to know something about the  
24      area.

25      Q.       What did you do after Duke?

                  MAHANEY REPORTING SERVICES  
                  Tel. (617) 542-4207

15

1       A.       Which time?

2       Q.       After '85.

3       A.       That's when I went to the University of  
4       Chicago and Northwestern.

5 Q. University of Chicago first?

6 A. Chicago for a one-year visit, and at

7 the same time I was concurrently a professor at

8 Northwestern.

9 Q. What did you teach at the University of

10 Chicago?

11 A. Nothing. It was straight research.

12 Q. What was your research in?

13 A. Risk, hazard warning, similar kinds of

14 things.

15 Q. Risk generally, or the risk of smoking?

16 A. I started worrying about smoking at

17 that time, but mostly I was doing hazard-warning

18 work.

19 Q. For the EPA?

20 A. For the EPA.

21 Q. Tell me again what year that was.

22 A. 1985 to '86.

23 Q. Is that when you started working in the

24 area of risk perception of smoking, or was it

25 after that?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

16

1 A. Well, that's when I started thinking

2 that that should be a -- well, it may even be

3 before I read the Shelling work, before that,

4 but Becker was doing smoking at the University

5 of Chicago, so smoking was in the air as being a

6 hot topic. So that's when at least I started

7       thinking about it more seriously than I had in  
8       the past.

9       Q.     Tell me about those two, the Shelling  
10      and Becker work.

11      A.     Shelling was a professor at Harvard and  
12      he had done work on smoking and self-control.

13      Q.     Was it in a book or an article or --

14      A.     It was an article that eventually  
15      showed up in his book, but it was circulating  
16      fairly widely as a working paper at Harvard.

17      Q.     Do you remember the name of the  
18      article?

19      A.     It may have been something like, "The  
20      Battle for Self-Control," something like that.

21      Q.     What about the book?

22      A.     His book?

23      Q.     Yes.

24      A.     The one that came after -- it's the one  
25      that came after "Micromotives and

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

17

1       Macrobehavior," but I don't recall the name of  
2       the book.

3       Q.     What about Becker?

4       A.     He worked on rational addiction to  
5       cigarettes.

6       Q.     And was it some particular book or  
7       article that you read of his that made you want  
8       to go into the field?

9       A.     Well, his work was ultimately

10 published. I think it's called "The Theory of  
11 Rational Addiction." Earlier work before than  
12 with Stigler, whose center I was visiting,  
13 touched on those sorts of issues. And I got  
14 involved largely because nobody seemed to be  
15 looking at risk issues, so the risk aspect was  
16 being ignored.

17 Q. The risk aspect?

18 A. Of smoking.

19 Q. All right. I need to find out in which  
20 areas you are going to offer opinions and which  
21 areas you are qualified to offer opinions in.  
22 This might be a little tedious, but bear with  
23 me. I just want to ask you some questions and  
24 you tell me the answers.

25 Are you a physician?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

18

1 A. No.

2 Q. So you are not qualified to give a  
3 medical opinion?

4 A. No.

5 Q. Are you a toxicologist?

6 A. No.

7 Q. Do you consider yourself an expert in  
8 toxicology?

9 A. No.

10 Q. You are not an epidemiologist?

11 A. No.

12 Q. Are you a psychologist?  
13 A. No.  
14 Q. Do you consider yourself an expert in  
15 psychology?  
16 A. It depends on what you define to be the  
17 scope of psychology.  
18 Q. What do you define the scope of  
19 psychology to be?  
20 A. Well, if you are asking, can I look at  
21 questions that psychologists look at, some  
22 questions, the answer is yes, in that I look at  
23 some things psychologists also look at.  
24 Q. Do you offer your services as a  
25 psychologist?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

19

1 A. Am I a practicing psychologist? No.  
2 Q. Have you taught courses in psychology?  
3 A. I teach courses in risk analysis, which  
4 involves interdisciplinary work. I run an  
5 interdisciplinary journal that includes  
6 psychology.  
7 Q. What about specifically psychology,  
8 psychology 101?  
9 A. No, I don't teach psychology, courses  
10 in the psychology department.  
11 Q. Have you written in the area of  
12 psychology?  
13 A. I have written work about risk  
14 perception, and some psychologists write on the

15 same topic. I have written or done projects  
16 with psychologists, so there's a lot of overlap.

17 Q. I understand there's a lot of overlap  
18 with your field of risk perception and a lot of  
19 other fields, but what I'm asking is  
20 specifically psychology. Have you ever written  
21 specifically on psychology as the focus of some  
22 article, book or research?

23 A. If you would call how people perceive  
24 risk as psychology, I have written about that.

25 Q. Do you think it is?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

20

1 A. No, I think it's, risk perception is  
2 fair game for economics. I mean it's been  
3 central to economics for centuries.

4 Q. Not psychology?

5 A. And psychologists worry about it, too.

6 Q. Do you intend to offer an opinion in  
7 this case in the field of epidemiology?

8 A. No.

9 Q. What about health care in general? Do  
10 you consider yourself an expert in health care?

11 A. Not in providing health care. I have  
12 done work analyzing health price inflation. I  
13 directed the health price inflation report for  
14 the Carter White House, so I have done some work  
15 in health care.

16 Q. Have you written specifically in health

17 care?

18 A. Well, I have published in the Journal

19 of Health Economics, which is the major health

20 journal.

21 Q. What was the title of that article?

22 A. It's on my vita. I don't remember.

23 Q. Was the subject related to health care,

24 or was it health care specifically?

25 A. It was probably dealing with health

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

21

1 risk regulation.

2 Q. Do you consider yourself a health care

3 economist?

4 A. I am always invited to the National

5 Bureau of Economic Research health meetings, but

6 I do health and safety risks primarily, as

7 opposed to worrying about Medicaid reimbursement

8 formulas, although I have a book on Social

9 Security and Medicare.

10 Q. Do you consider yourself an expert in

11 economics?

12 A. Yes. Not everything in economics, but

13 given what I do, yes.

14 Q. Now, you don't have any formal legal

15 training, do you?

16 A. No.

17 Q. You are not a lawyer?

18 A. No.

19 Q. Did you consider yourself an expert in

20 the law?

21 A. No, in the sense of practicing law. I  
22 have never practiced law.

23 Q. But you have taught courses in the law?

24 A. I hold a professorship in the law  
25 school, and I teach judges.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

22

1 Q. And you have published in product  
2 liability?

3 A. Yes, I have.

4 Q. So that part of the law, at least, you  
5 have knowledge of?

6 A. As -- my knowledge is as an economist.  
7 I'm not going to give you a legal ruling or  
8 start interpreting what the laws mean.

9 Q. What about survey design? Do you  
10 consider yourself an expert in survey design?

11 A. In terms of the drafting of the survey  
12 questions, that aspect of survey design, yes.  
13 But I'm not a sampling person.

14 Q. Have you ever offered your services  
15 specifically for design of a survey?

16 A. Yes.

17 Q. Tell me when.

18 A. I have been doing this almost annually  
19 for the past 14 years for the US EPA.

20 Q. Tell me what was involved in that.

21 A. I have a survey we ran in the field

22       this past year, it involves figuring out what  
23       questions you want to address in the survey,  
24       then it involves the design of the survey,  
25       pretesting the survey. You may run focus groups

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

23

1       before that, depending on context. Then we are  
2       doing a large series of pilots in North Carolina  
3       and Colorado, and based on the pilots, we are  
4       going to design a national survey.

5       Q.     Have you written in survey design? Is  
6       that a field?

7       A.     People do write about that. I have  
8       written about how you would approach valuations  
9       issues in survey context, so we have done  
10      innovative things in that area. We were the  
11      first people to use paired comparisons to elicit  
12      tradeoffs. We are in the forefront in using  
13      interactive computer program surveys. So to  
14      that extent, yes, but in terms of survey design  
15      theory, no. As in, generally, abstract survey  
16      design, no.

17      Q.     What is survey design theory?

18      A.     If you are going to write something  
19      like, well, whether you should also put  
20      demographic questions here in a survey or  
21      something like that, that would generically  
22      apply to any survey, I have not written on  
23      that.

24      Q.     The format of the survey, the way

25 questions are ordered?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

24

1 A. We have done a lot of testing whether  
2 order affects matter, as well, so whether  
3 putting things in pairwise comparisons on the  
4 left or right affects our valuations.

5 Q. Have you written specifically on that?

6 A. Yes, it's part of our reports to  
7 government agencies.

8 Q. What reports were those?

9 A. Well, we have one report that we just  
10 made this year on water. So that that was done,  
11 how people value water quality, how people value  
12 ambiguous risks. We did a report for that a few  
13 years ago. We've got the two books, the Harvard  
14 Press book and MIT Press book, which are  
15 compendiums of two of our chemical-labelling  
16 surveys that we did for EPA.

17 We have our chronic bronchitis work,  
18 our nerve disease work, cancer surveys. All  
19 these are separate surveys, and the results of  
20 these surveys are -- some of the results are  
21 published and are listed on my vita.

22 Q. And all of these are specifically on  
23 the subject of the theoretical survey design?

24 A. No, all of these things are on  
25 valuation issues for EPA, but as part of that,

MAHANEY REPORTING SERVICES

1       because people have never confronted these  
2       issues before, we did develop new survey  
3       approaches to elicit these things. So the use  
4       -- you have pairwise comparisons with  
5       multi-attribute tradeoffs, and we developed what  
6       we think is a novel technique for eliciting a  
7       sequence of responses in surveys in terms of  
8       tradeoffs, to construct people's preferences,  
9       and to analyze people's preferences. That's  
10      part of our new survey that we just completed.

11       Q.     That's interesting, but remember what I  
12      asked. I understand that your work overlaps  
13      with a lot of other areas, but I am asking if  
14      you have specifically published in the area of  
15      survey design. I understand that some of the  
16      work that you have done may have touched upon  
17      that, but have you published specifically on  
18      survey design? Did you write an article that  
19      the focus of it was survey design?

20               MR. ATKESON: He testified about  
21      reports he submitted to the agencies. Asked and  
22      answered.

23       A.     That's my answer. When I write about  
24      survey design, it's been in the context of the  
25      specific issues that I am analyzing. So that

1       when we write about survey design, how would you  
2       develop a survey to elicit complex preferences  
3       for water quality over multiple attributes. So  
4       we have written about that. And the way I would  
5       approach it, rather than sitting back and  
6       saying, "how would I design a survey"  
7       independent of the subject matter you are  
8       interested in, all my survey design work deals  
9       with specific subject matter.

10       Q.     Again, that's very interesting, but I'm  
11       going to move to strike as nonresponsive. Have  
12       you written specifically in the area of survey  
13       design?

14               MR. ATKESON: Asked and answered.

15       A.     I have answered. We can read back my  
16       answer, but I'm not going to change the answer.  
17       I have answered. I will stay with that. I have  
18       written about survey design as part of my work.

19       Q.     As part of your work. Okay. What  
20       about statistics? Do you consider yourself an  
21       expert in statistics?

22       A.     Insofar as it's used by economists, but  
23       I do not teach in a statistics department. I  
24       have never sought a job in the statistics  
25       department.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

27

1       Q.     Okay.

2       Q.     Have you -- do you intend to offer an  
3       opinion in this case on statistics?

4           A.     My work involves statistical analysis,  
5     so to that extent, yes.

6           Q.     What about econometrics? Do you  
7     consider yourself an expert in econometrics?

8           A.     I consider myself an applied  
9     econometrician, not an econometric theorist.

10          Q.     What does that mean?

11          A.     I mean I'm not going to invent a new  
12     estimator, but I use econometrics as part of my  
13     work, and I review econometric publications for  
14     journals.

15          Q.     Have you ever been retained  
16     specifically as an econometrician?

17          A.     Well, my work in the DES litigation was  
18     solely statistical and econometric. I had no  
19     knowledge of DES or about pharmaceuticals to any  
20     great extent at that point.

21          Q.     Which journals and publications on  
22     econometrics have you reviewed?

23          A.     I am the reviewer for these journals,  
24     so I am on the editorial board of the Review of  
25     Economics and Statistics, which is Harvard

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

28

1     University's econometrics journal. Editorial  
2     board of the American Economic Review, the  
3     American Economic Association's main journal; I  
4     review only econometric papers. I am on the  
5     editorial board of a number of other journals

6 listed on my vita, where my sole primary  
7 reviewing responsibility is in the econometric  
8 area, as opposed to the theory area.

9 Q. What about behavioral science? Are you  
10 an expert in behavioral science?

11 A. I am not a behavioral scientist, but  
12 economists worry about how people make  
13 decisions, and to the extent that that's  
14 behavior, I am an expert in it, to the extent  
15 that economists worry about behavior.

16 Q. You are telling me that your field  
17 overlaps with behavioral science, but you are  
18 not specifically a behavioral scientist; is that  
19 it?

20 A. Economists study the human behavior  
21 involved in economic decisions, and that aspect  
22 of it is what I do.

23 Q. Have you ever been a reviewer on any  
24 econometric work in the field of smoking or  
25 health care costs?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

29

1 A. Yes.

2 Q. What work was that?

3 A. US EPA, I was a reviewer for their  
4 environmental tobacco smoke study. And I also  
5 review for the American Economic Review and  
6 other journals. I have been the reviewer for  
7 econometric articles dealing with smoking.

8 Q. The reviews that you did for the EPA

9       that you just talked about, are those available,  
10       publicly available?

11       A.     I know people have requested them, and  
12       EPA refused to release them.

13       Q.     Do you know why?

14       A.     Because they are private reviews  
15       prepared for the agency.

16       Q.     Have those been provided to us?

17       A.     I don't have them. I can't provide  
18       them to you.

19       Q.     Do you consider yourself an expert in  
20       pharmacology?

21       A.     No.

22       Q.     What about policy analysis?

23               MR. ATKESON: Objection. Asked and  
24       answered. Same objection.

25       A.     I have taught at the Kennedy School,

MAHANEY REPORTING SERVICES

Tel. (617) 542-4207

30

1       which is the public policy school, and I have  
2       taught public policy at Duke.

3       Q.     So you do consider yourself a policy  
4       analyst?

5       A.     I consider myself able to teach policy  
6       analysis.

7       Q.     What have you done to prepare for your  
8       testimony in this case?

9       A.     I reviewed some of my articles and ran  
10       some statistical work, and over the course of

11 time I have looked at just some papers in the  
12 literature, as well as the statistics on excise  
13 taxes.

14 Q. Have you reviewed any depositions of  
15 any experts?

16 A. No.

17 Q. Have you reviewed any depositions of  
18 anyone?

19 A. No.

20 Q. Did you review any of the expert  
21 reports for any of the defense experts or the  
22 plaintiff's experts in this case?

23 A. No.

24 Q. In any other case?

25 A. No.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

31

1 Q. You have never reviewed any of them?

2 A. Not for this deposition.

3 Q. What about for other depositions, for  
4 other AG litigation?

5 A. I have seen some expert reports, and I  
6 have read some.

7 Q. Which ones have you seen?

8 A. I have seen some work by Jeffrey  
9 Harris. I'm not sure what, or in what  
10 connection -- whether it was an AG case or  
11 something else.

12 Q. How did you get it?

13 A. I was sent it by lawyers. I think this

14 was just -- not these people. Some other  
15 lawyers, for other matters.

16 Q. What other matters? Was it an attorney  
17 general case, I assume?

18 A. It was just dealing with the whole  
19 policy issue regarding the national agreement.  
20 So they just sent me Jeffrey Harris's analysis  
21 of the national agreement.

22 Q. So you did work for lawyers regarding  
23 the national agreement?

24 A. I looked at the Harris things, but I  
25 never ended up doing any work for them.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

32

1 Q. Now this -- you never provided an  
2 opinion to them?

3 A. No opinion, no written report.

4 Q. Did you provide any details on the  
5 settlement to anyone?

6 MR. ATKESON: Details? What do you  
7 mean?

8 Q. Oral comments. You said you didn't  
9 provide a written opinion?

10 A. The proposed settlement was announced  
11 before I knew anything about it, so I was not  
12 involved in anything that led up to it. I'm not  
13 sure what the question you are asking is.

14 Q. The question I'm asking, you said you  
15 were provided the report or something of Doctor

16 Harris's to review in regard to the national  
17 settlement, and I want to know, did you get back  
18 to the lawyers that provided you that  
19 information?

20 A. I think I may have kicked out some  
21 other numbers regarding the present value of the  
22 settlement, the annual payments at different  
23 interest rates, but that's about it. I don't  
24 think I did much more.

25 Q. Was that in written form?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

33

1 MR. LEITER: Let's stop there. We  
2 are now far off of the Washington case. If you  
3 are going to question him about the national  
4 settlement, which is not part of the Washington  
5 case, we are going to instruct him not to  
6 answer. That's not at all relevant here, and I  
7 don't think those are appropriate questions. So  
8 I would suggest that you move on to issues that  
9 are relevant to this case.

10 MR. GRUENLOH: I think it may be  
11 relevant because I'm trying to find out what  
12 reports he has done, what reports he has  
13 reviewed, and the context in which he reviewed  
14 those reports.

15  
16 (Witness conferred with counsel.)  
17

18 MR. ATKESON: If you look at the

19       Brookings review article, you will see his views  
20       on the national settlement.

21       Q.     So the Brookings review is the result  
22       of your work with the lawyers on the national  
23       settlement?

24       A.     No, they didn't pay for it. I looked  
25       at the thing, the national settlement. We never

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

34

1       -- nothing seemed to happen on that.

2               I wasn't doing anything or requested  
3       to do anything for them. Brookings called me up  
4       and said, "We want an article on the national  
5       settlement." I quickly wrote the article and  
6       sent it in, so it was not supported by anybody.

7               MR. ATKESON: And you have got  
8       copies of that.

9       Q.     You don't remember the names of the  
10       lawyers that you talked to about the national  
11       settlement?

12              MR. ATKESON: That's privileged.

13       Q.     Did you ever -- did you have any  
14       conversations or correspondence with anyone  
15       prior to this deposition to prepare for this  
16       deposition?

17       A.     Correspondence? No.

18       Q.     Conversations?

19       A.     Yes, yesterday we had a brief meeting.

20       Q.     With who?

21           A.     The trio of people here.  
22           Q.     Okay.  What did you discuss in that  
23     meeting?  
24           A.     Mostly, they just wanted to know what  
25     the scope of my opinion was, or the nature of my

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

35

1     opinion was, on different topics.  
2           Q.     And you said there was no  
3     correspondence, no written correspondence?  
4           A.     I did not write anything either way.  
5                   MR. ATKESON:  He has been -- I faxed  
6     him two things.  One is the address where this  
7     deposition was going to take place, and I faxed  
8     him the excise tax sheet, which I think you have  
9     marked as one of the exhibits to come up later  
10    today.  
11          Q.     What about in preparation for your  
12    testimony in this case?  Not just this  
13    deposition now.  I'm not restricting it just to  
14    this deposition.  Have you had any  
15    correspondence with any of the lawyers regarding  
16    this case?  
17          A.     No.  
18          Q.     Okay.  Have you talked to any other  
19    lawyers besides the three that are in this room  
20    right now about this case?  
21          A.     No.  
22          Q.     Did you do anything else to prepare for  
23    your testimony in this case?

24           A.     No, just reviewing articles, and that's  
25     about it. I mentioned before some statistical

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

36

1     work. But that's all.

2           Q.     We will get to that in a little bit.  
3     Now, the state is entitled to receive all of  
4     your work papers, all of your notes, everything  
5     that you are relying upon in this case,  
6     everything that -- your file, so to speak, in  
7     this case. Have you done a thorough search, and  
8     has that all been provided to counsel?

9           A.     That's why I provided this paper.

10          Q.     And that paper is -- that's the new  
11     paper. Okay. Everything else that you are  
12     relying upon has been provided?

13          A.     It depends on where it goes in terms of  
14     how people respond to me. But everything that I  
15     would use, assuming there's nobody on the other  
16     side, you have got.

17          Q.     Can you describe that paper for me?

18          A.     This paper is a summary of my smoking  
19     risk perception work.

20          Q.     And what are its findings?

21          A.     People overestimate the risks of  
22     smoking.

23          Q.     Is there any new material that you use  
24     to base your opinions on in that paper?

25          A.     Well, there's more detailed analysis of

1 the 1997 Audits & Surveys data so that I could  
2 both independently verify the Audits & Surveys  
3 results as well as, you know, explore their  
4 sensitivity.

5 Q. I would like the record to reflect that  
6 we are just seeing this survey today. And I  
7 understand you told me it contains nothing new?

8 MR. ATKESON: The record reflects  
9 that you received the paper today. The survey  
10 you received many months ago. And you have all  
11 the original data as well.

12 MR. GRUENLOH: We have not had a  
13 chance to review it. You're telling me it's  
14 nothing new.

15 MR. ATKESON: It was presented, if  
16 you look at the date, within the last week, so  
17 this is as new as it gets. He gave it to us and  
18 we are giving it to you, and all there is is  
19 some more detail and refinement. There are no  
20 new conclusions.

21 MR. GRUENLOH: I would preserve our  
22 right to go back at a later time for if in fact  
23 there is new material in there.

24 MR. ATKESON: As you wish.

25 Q. You were retained by the attorneys in

1 the Minnesota Attorney General case by the  
2 defendants; is that correct?

3 A. Yes.

4 Q. Now, in that case -- help me out,  
5 because you were there, and probably know more  
6 about the details than I do. In that case,  
7 there was a problem. Your opinion was  
8 ultimately excluded there; correct?

9 A. No, I never was -- I never set foot in  
10 the courtroom. I was never offered to testify.

11 Q. Do you know anything about the  
12 information that was provided to the Minnesota  
13 counsel in that case?

14 MR. ATKESON: What information?

15 Q. The information upon which you relied  
16 to form your opinions.

17 MR. ATKESON: It's all the same as  
18 in this case. There's nothing new. You have  
19 got it all except if he has written a new paper.

20 Q. Let me ask you this. The information  
21 that you provided to the defense attorneys in  
22 the Minnesota case, that's exactly what you have  
23 provided here in this case, aside from this  
24 paper?

25 A. Well, there was a lot of late

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 scrambling that went on, giving the Minnesota

2 people the raw Audits & Surveys data.

3 MR. ATKESON: But we turned that  
4 over to them.

5 A. (continued) Since you have the raw  
6 data, you have everything that we turned over,  
7 as far as I know.

8 MR. ATKESON: And the same is true  
9 for Texas, Florida, Mississippi.

10 Q. There's three surveys; correct?

11 A. Two Audits & Surveys surveys, plus my  
12 own.

13 Q. Okay. And all of those have been  
14 provided, as well as the raw data for all three  
15 of those?

16 A. You don't have the raw data for my  
17 North Carolina survey.

18 Q. Why not?

19 A. I don't think I have it anymore.

20 MR. ATKESON: Everything that still  
21 exists in raw data, you have.

22 Q. Why don't you have it anymore? Did you  
23 destroy it?

24 A. I didn't destroy it. I moved, and when  
25 you move, you don't take everything with you.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

40

1 As it is, I have got lots of things in storage.  
2 So if I have it, I don't know where it is.

3 Q. I'm kind of curious. In your Florida  
4 deposition you were asked if your, what I call

5 your early death analysis, your lifetime  
6 analysis regarding the nursing home costs and  
7 the savings to the state, you were asked if your  
8 opinion there concedes causation. And you  
9 answered yes.

10 Is that still your opinion?

11 MR. ATKESON: Do you have the  
12 deposition?

13 MR. GRUENLOH: I can get it.

14 MR. ATKESON: Is that a paraphrase  
15 or is that the wording?

16 Q. "Yes, it assumes causation."

17 MR. ATKESON: What's the question?

18 Q. The question was, "Does your analysis  
19 assume that cigarettes cause death and disease?"

20 A. I denied that throughout the whole  
21 deposition, that particular wording.

22 Q. So it's not your opinion that that  
23 particular analysis assumes some causation  
24 between cigarettes and disease and death?

25 MR. ATKESON: I think you have to

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

41

1 show him the deposition for context.

2 Q. I am asking a straight question. Is  
3 that your opinion, or is that not your opinion?

4 A. Could you go back to your original  
5 question?

6 Q. Sure. My question is, what I call your

7 early death analysis, and your final opinion is  
8 that smoking saves the state money, and I'm  
9 asking you if in that opinion, if that opinion  
10 implicitly assumes that smoking causes death and  
11 disease.

12 A. Well, the implicit assumption is that  
13 smokers have a shorter life expectancy, so  
14 there's an increased probability of death or an  
15 increased probability of disease.

16 Q. You are saying probability, not  
17 causation.

18 A. Well, the trouble with causation is  
19 that people often misestimate that as being a  
20 probability of 1.0, and it's not a certainty, as  
21 it is not a certainty that smoking will give you  
22 lung cancer, cause heart disease or any of the  
23 other innumerable ailments linked to smoking.  
24 Rather, there's some probability that these  
25 adverse events will occur.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

42

1 Q. And that premise continues to be  
2 present in your analysis for this case?

3 MR. ATKESON: He called it an  
4 assumption, not a premise. That's your word,  
5 not his.

6 Q. That assumption?

7 A. Well, the assumption is incorporated  
8 because my analysis is built on the Manning et  
9 al. study, which was the empirical foundation

10 for that. But I do look at various reference  
11 points for the risk of smoking, but I do not  
12 make any judgment one way or the other as to  
13 whether those reference points are too high or  
14 too low. So I'm just taking the Surgeon  
15 General's estimates at face value. But I'm not  
16 doing an analysis to say yes, I agree with the  
17 Surgeon General.

18 Q. So you don't have any opinion of your  
19 own?

20 MR. ATKESON: Offering as an expert  
21 today, no.

22 MR. GRUENLOH: Is that the witness's  
23 answer, that you have just given to him?

24 MR. ATKESON: I'm telling you what  
25 we offering him as an expert on.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

43

1 MR. GRUENLOH: Limit your objection  
2 to the form, please.

3 MR. ATKESON: We are offering him as  
4 an expert in economics.

5 MR. GRUENLOH: I am not deposing  
6 you.

7 Q. What is your opinion?

8 MR. ATKESON: Hold on. Let me state  
9 this for the record. We are not offering him as  
10 an expert today in causation or medicine. You  
11 have already asked the questions, and his  
12 opinion is irrelevant to this deposition. I

13 state my objection on the record. You can go  
14 ahead.

15 Q. What is your opinion on causation? Do  
16 cigarettes cause disease and death?

17 MR. ATKESON: Same objection.

18 A. The available evidences seems to  
19 suggest that cigarettes do have an -- do  
20 increase your probability of various adverse  
21 health outcomes.

22 Q. By how much do you believe that they  
23 increase that probability?

24 MR. ATKESON: Same objection.

25 A. I don't know the exact extent. What --

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

44

1 so what I have done is I have taken the medical  
2 judgments of the Surgeon General, and used those  
3 as my reference points.

4 Q. So you have used the Surgeon General's  
5 Report as the basis for your opinion on the  
6 probability of smoking causing death and  
7 disease; is that correct?

8 A. Most of my lung cancer and fatality  
9 numbers are from the Surgeon General, which I  
10 then coupled with the denominator to get a  
11 probability, or from similar sources relied upon  
12 by the Surgeon General. They are all in my  
13 book.

14 Q. Why did you use the Surgeon General's

15 Report?

16 A. Because I wanted to show that even if I

17 accepted the reference points from the risk

18 levels stated by the Surgeon General, that

19 cigarette risk perceptions were still too high.

20 So I didn't want to muddy the waters by arguing

21 about the accuracy of the Surgeon General's

22 estimates.

23 Q. Have you ever seen different numbers

24 other than those reported in the Surgeon

25 General's Report that you could have relied

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

45

1 upon?

2 A. I haven't seen other ones, but I have

3 done research suggesting that the relationship

4 between being a cigarette smoker and your health

5 is very complex, and unless you control for all

6 the other sources of risk, then simply looking

7 at the risk of smokers versus nonsmokers will

8 overstate how risky smoking is per se.

9 Q. And that was your own work?

10 A. My own work, as well as joint work with

11 Professor Hersch.

12 Q. Can you tell me about those?

13 A. We have two papers. One is published,

14 and the other, we gave it at the American

15 Economic Society meeting. It's not published.

16 Cigarette smokers are more likely to work on

17 risky jobs. They are more willing to bear risks

18 on the job.

19 Q. These -- I'm sorry -- are these the  
20 conclusions of the study?

21 A. These are the empirical results.

22 Q. Can you tell me the titles first?

23 A. Of the papers?

24 Q. Yes.

25 A. The new one is called "Cigarette

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

46

1 Smokers As Job Risk Takers." And the earlier  
2 one is the one published in the Journal of Human  
3 Resources. It's listed on my vita. But it's  
4 about ten years ago.

5 Q. What were the empirical findings of the  
6 first one?

7 A. The first one in the Journal of Human  
8 Resources focused on the wage risk tradeoff.  
9 Smokers are more willing to work on hazardous  
10 jobs in terms of the wage they require to work  
11 on the job. The second study was a national  
12 study; the first study was only a local survey.  
13 The second study used national data, and we  
14 showed that smokers were more willing to work on  
15 hazardous jobs. They work in higher risk  
16 industries.

17 For any given industry risk level,  
18 they are more likely to get injured on the job.  
19 They are more likely to get injured at home.

20 She has also done work on smokers being less  
21 likely to floss their teeth. There is a  
22 sequence of other poor health habits correlated  
23 with smoke status, even controlling for things  
24 like education.

25 Q. The first paper, you said you did that

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

47

1 with Hersch?

2 A. Joanie Hersch.

3 Q. Who funded that research?

4 A. Nobody. I mean, she may have had a  
5 grant from the University of Oregon to gather  
6 the data, but the analysis itself we just did as  
7 research. So I received no money of any kind  
8 from anybody for this project.

9 Q. How did that paper relate to  
10 causation? What I say causation, I mean death  
11 and disease caused by cigarettes.

12 A. Well, if cigarette smokers are risky in  
13 a variety of other ways, not just smoking, then  
14 if you do a study or the Surgeon General does a  
15 study and simply compares the health care costs  
16 of cigarette smokers versus nonsmokers and  
17 doesn't control for all of their other diverse  
18 health-affecting activities, then your estimate  
19 will tend to overstate the smoking-attributable  
20 risk.

21 Q. That's one of the conclusions of the  
22 paper?

23           A.     No, we didn't talk about smoking-  
24     attributable risk. This was just about job  
25     risks. So we were just focusing on job risks,

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

48

1     and smokers being riskier people.

2           Q.     So that's the opinion that you arrived  
3     at, based upon that paper?

4           A.     It's a straightforward result of that  
5     paper, yes.

6           Q.     Is that reported in the paper? Is it  
7     printed?

8           A.     No, because the paper is not about the  
9     Surgeon General. It's about smokers.

10          Q.     What about the second paper? Who  
11     funded that?

12          A.     Well, some of those results I talked  
13     about were from the second paper.

14          Q.     Tell me again what the second paper was  
15     about.

16          A.     The same thing as the first paper, but  
17     we also had data on home accidents and worker  
18     accidents on the job, and we used national  
19     survey data.

20          Q.     And who funded that paper?

21          A.     Nobody.

22          Q.     Who funded -- do you know who funded  
23     the research?

24          A.     Generally, no. I don't need money for

25 just writing papers.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

49

1 Q. What data did you use for those papers?

2 A. The first one was a data set that  
3 Joanie Hersch developed. It was a survey in  
4 Oregon of several enterprises. The second study  
5 I believe was the National Health Interview  
6 Survey.

7 Q. Let's go to the first one. The first  
8 one was based on an Oregon study, you said?

9 A. That's correct.

10 Q. And using that Oregon data, you formed  
11 an opinion which you are applying to a national  
12 population; is that correct?

13 A. You just asked me what the paper  
14 showed. We showed that for this sample,  
15 cigarette smokers were more willing to take  
16 risks, for this sample. Two subsequent papers  
17 generalized that to the national level, using  
18 national data.

19 Q. And one of those is the one in which  
20 you used the NHIS survey?

21 A. And another one is a paper Professor  
22 Hersch wrote with someone else.

23 Q. What data set did she use?

24 A. She used the NHIS in that one, as well,  
25 I think.

MAHANEY REPORTING SERVICES

1           Q.     Professor Hersch's -- so in both those  
2           papers, national data from the NHIS survey was  
3           used to formulate an opinion for the national  
4           population. So do I have that right?

5           A.     That's correct.

6           Q.     Can you use the findings in those  
7           papers to draw conclusions about state  
8           populations?

9           A.     We can use these results to draw  
10          general conclusions about directions of  
11          effects. So that I could expect, if cigarette  
12          smokers are more likely to get injured at home  
13          nationally, that that would be true of cigarette  
14          smokers in Kansas as well as Mississippi. The  
15          analysis included regional control variables,  
16          but we didn't analyze the interaction of region  
17          with these effects.

18          Q.     What regional control variables were  
19          used?

20          A.     Just a series of dummy variables for  
21          different regions, so controlling for whether  
22          you lived in the southwest or northeast, that  
23          kind of thing.

24          Q.     Any other demographic controls?

25          A.     Yes, there was the whole detailed set

1 of demographic, whole shooting match, cross age,  
2 race, gender, education, years of work  
3 experience, union status, et cetera.

4 Q. We have talked about three papers, I  
5 think. Two are -- one solely by Professor  
6 Hersch. What one was done in combination with  
7 Professor Hersch, and what did you do on your  
8 own?

9 A. Two with Professor Hersch and one by  
10 Hersch and Todd Pickton, P-I-C-K-T-O-N.

11 Q. And do any of those three papers report  
12 mortality data as it relates to smoking,  
13 mortality or morbidity data?

14 A. No, the focus is on job accidents or  
15 home accidents.

16 Q. Okay. In what other states have you  
17 been asked by the defendants to testify or in  
18 what other states have you been retained as an  
19 expert?

20 MR. LEITER: We have asked that of  
21 the state's experts, and we have gotten  
22 instructions to the witness not to answer. I am  
23 going to apply the same rule here.

24 MR. GRUENLOH: I'm not asking what  
25 the substance --

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 MR. LEITER: Those exact questions,  
2 you can talk to your colleagues on the plaintiff  
3 side, when we asked them of plaintiff's experts,

4       they objected and instructed the witness not to  
5       answer, not to list the states, and I'm going to  
6       apply the same rule here.

7               MR. YOUNG: Did you say their  
8       objection was valid?

9               MR. LEITER: I'm applying the same  
10       objection.

11              MR. YOUNG: My question is, did you  
12       say their objection was valid? Otherwise, you  
13       are not making a valid objection.

14              MR. LEITER: I am not going to get  
15       into a legal dispute. We're objecting, and we  
16       are instructing him not to answer. Move on to  
17       your next question.

18              MR. YOUNG: On what grounds?

19              MR. LEITER: Move on to your next  
20       question.

21              MR. YOUNG: I am asking, is it  
22       privilege? Are you contending it's privilege?  
23       If so, we need to know what the privilege is so  
24       we can challenge at a later date. What's the  
25       privilege?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

53

1              MR. LEITER: I am going to assert  
2       attorney-client privilege, work product  
3       privilege, and I'm going to instruct him not to  
4       answer.

5              MR. YOUNG: Based upon

6 attorney-client?

7 MR. LEITER: Move on to your next  
8 question.

9 MR. YOUNG: Are you conceding the  
10 state's objection to that same question was  
11 valid, then?

12 MR. LEITER: I think we have said  
13 all we need to say on the subject. Let's move  
14 on to the next question.

15 Q. Are you going to take your counsel's  
16 advice not to answer that question?

17 A. Yes.

18 Q. In your Mississippi deposition, you  
19 testified that you were retained by the lawyers  
20 for the tobacco industry sometime around 1986.  
21 Is that your recollection?

22 A. It was sometime around that time  
23 period.

24 Q. Has your recollection gotten better?  
25 Do you remember the exact --

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

54

1 A. It could have been the fall of '86.  
2 I'm not sure when. It could have been the fall  
3 of '87. I just know it was when I was at  
4 Northwestern.

5 Q. And you are still working for the  
6 tobacco industry today; correct?

7 A. I have been retained by the law firm,  
8 but I'm not doing any direct work for any of the

9 companies.

10 Q. I know that you went over this in your  
11 Mississippi deposition, but why do you make that  
12 distinction?

13 A. Because I have never -- well, I don't  
14 think I have ever gotten a check directly from a  
15 company, except perhaps for the Premier  
16 analysis, which was over a decade ago. So all  
17 the people I have contact with are cigarette  
18 industry lawyers, as opposed to people who are  
19 directly employed by the company.

20 Q. When we talked earlier today about when  
21 you started becoming interested in the area of  
22 risk perception, you said it was around '86.  
23 Can you tell me whether it was before or after  
24 the tobacco industry contacted you that you  
25 began writing in the area of the risk perception

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

55

1 as it relates to smoking?

2 A. Well, risk perception generally, I have  
3 been interested in since 1974 or so, at least.  
4 In terms of smoking, I had some interest in  
5 alcohol risks and other food safety risks in the  
6 early 1980's. I began a project with Professor  
7 Hersch in, I believe it was -- I will have to  
8 check exactly -- but I believe it was 1986 when  
9 we started the project. So I would say it was  
10 concurrent, roughly concurrent, the other  
11 research, plus the smoking risk perception work.

12 Q. The risk perception work that you have  
13 done on smoking, that was concurrent with -- was  
14 that the same day as you were contacted by the  
15 tobacco industry?

16 A. No, I became interested in cigarette  
17 risk perception as an issue when I was a visitor  
18 at the University of Chicago. That was 1985 to  
19 1986. That's when the Becker work, the Stigler  
20 work -- so it was, at least at the lunch table,  
21 it was a hot topic. The period after that, when  
22 I went to Northwestern, was when I started  
23 actually doing significant empirical work, but  
24 it was not until I got the Audits & Surveys data  
25 that I could do correct work on smoking risk

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

56

1 perception as opposed to looking at smoking's  
2 ramifications for things like job risk choices.

3 Q. And what year was that in?

4 A. Sometime after 1985, so sometime  
5 between then and 1990. So it happened while I  
6 was at Northwestern, both of these things.

7 Q. Let me ask you, before you got that  
8 first survey, that first survey data, had you  
9 started to do any research whatsoever in the  
10 area of risk perceptions on smoking?

11 A. Other than just general reading and  
12 thinking about it, and the work on job safety,  
13 no.

14 Q. So you hadn't done any research into  
15 that until after the tobacco industry contacted  
16 you; is that correct?

17 A. Well, I had done research and reading  
18 on what other people had done in the area, so  
19 the work by, you know, psychologists in the  
20 area, I had read that. So I had read a variety  
21 of other studies, but I had not done any  
22 original empirical work until I had this data.

23 Q. And that reading and research, that was  
24 concurrent with being contacted by the tobacco  
25 industry?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

57

1 A. It was before. So I had done reading  
2 and research in this area when I was at the  
3 University of Chicago, which was before they  
4 contacted me.

5 Q. Who gave you the survey data that you  
6 are talking about? And we are talking about the  
7 1985 Audits & Surveys data?

8 A. Right.

9 Q. Who gave that to you?

10 A. Barbara Kacir, K-A-C-I-R.

11 Q. Who was she with?

12 A. She was with Jones, Day in Cleveland.

13 Q. When did she give that to you?

14 A. I don't recall. It was after 1985  
15 somewhere, when I was at Northwestern. I was  
16 there only for a few years during that stint, so

17 it was sometime during that time period.  
18 Q. So sometime after that is when you  
19 began your empirical work on risk perception in  
20 smoking?  
21 A. That's correct.  
22 Q. When was that?  
23 A. I don't know. As soon as I got the  
24 data. As soon as I got the data, I started the  
25 work.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

58

1 Q. So you have been working for Arnold &  
2 Porter for about twelve years now?  
3 A. No, I never until now submitted a bill  
4 to Arnold & Porter. I think this will be my  
5 first bill that I have ever sent them on smoking  
6 issues.  
7 Q. Who were you -- what law firm were you  
8 first retained by?  
9 A. Jones, Day.  
10 Q. And when was that?  
11 A. Well, I did some work for them in the  
12 1980's, around this time, so I discussed risk  
13 perceptions with them. And then I was engaged  
14 again for the tobacco litigation.  
15 Q. So you have been working for lawyers  
16 for the tobacco industry for roughly twelve  
17 years?  
18 A. There's a lot of empty years there

19       where I didn't do any work, so you can't pick a  
20       starting and ending year and make it sound like  
21       a continuing relationship, because it wasn't.  
22       It's not like the EPA; I have been continuously  
23       funded there. I have not been continually doing  
24       work.

25       Q.     What years did you actively do work for

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

59

1       them?

2       A.     I don't recall, but I think it was just  
3       a short period in the 1980's, maybe a year or so  
4       in the 1990's, and then recently. I don't know  
5       the exact days.

6       Q.     So during a lull when you weren't  
7       working for them, had the lawyers for the  
8       tobacco industry, either Jones, Day or Arnold &  
9       Porter, come to you and asked you to do some  
10      work for them, would you have done it?

11      A.     It depends on what the work was and  
12      whether it was interesting.

13      Q.     Did you have a standing contract with  
14      them?

15      A.     No.

16      Q.     Did they know your terms of engagement?

17      A.     No. Because your rates change over  
18      time, and during that time period my rates were  
19      rising, so I didn't write them and say, "In case  
20      you call me this year my new rate is this." So

21      --

22 Q. Tell me about the lull periods. When  
23 were those?  
24 A. I know that the entire time I was  
25 writing my smoking book until the time that it

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

60

1 was published, I did no work for the tobacco  
2 industry and had no prospect of ever working for  
3 them.

4 Q. From when to when?

5 A. Whenever that was. I'm not sure what  
6 that time period was when I was not doing any  
7 work for them.

8 Q. How long was it?

9 A. I would guess a couple of years, but I  
10 don't know the exact time. I just know, just in  
11 terms of how it was from where I was sitting,  
12 and when I started work on the book, I was doing  
13 nothing for them, and I know that I did nothing  
14 for them until after the book was published.

15 Q. You did not intend to do any work for  
16 them again, you said?

17 MR. ATKESON: That's not what he  
18 said.

19 A. I had no reason to expect that I would  
20 ever work for them again. I never did anything  
21 for them other than have some conversations with  
22 them. I never testified for them, I didn't  
23 prepare expert reports to be submitted.

24 Q. But you don't remember when that time  
25 period was?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

61

1 MR. ATKESON: Other than what he has  
2 testified to?

3 A. The time before the publication of my  
4 book -- the publication of my book was 1992. It  
5 was probably '90 to '92, somewhere in those  
6 years.

7 Q. Any other lulls?

8 A. I can't remember that much happening in  
9 the 90's either, until the attorney general  
10 litigation.

11 Q. So '93-94?

12 A. I don't recall particular years. I did  
13 some work in some time periods there on various  
14 matters, but no continuing work.

15 Q. What about the period from 1986 to  
16 1990?

17 A. That was when I started working for  
18 them.

19 Q. Was it your opinion that smokers  
20 overperceive the risk of smoking before you were  
21 retained by the industry, or did you come to  
22 that conclusion after you were retained?

23 A. I came to that conclusion after I  
24 examined the data. So that's a data question.  
25 That's not a where-do-you-stand-on-justice type

1 issue.

2 Q. And you received the data after you  
3 were retained by Jones, Day; correct?

4 A. Well, I wasn't retained by them  
5 indefinitely.

6 Q. After you were contacted?

7 A. After I was contacted, I got the data.

8 Q. And you had no opinion on whether they  
9 overperceived or underperceived the risk prior  
10 to that?

11 A. No. Cigarette smoking had been highly  
12 rated as a risk in the psychology studies done  
13 up to that point. But until this study nobody  
14 had precise quantitative information to  
15 ascertain whether smoking risks were  
16 overperceived or underperceived.

17 Q. You said you had done a little research  
18 prior to speaking with the industry, read some  
19 books and things, but you hadn't reached any  
20 conclusion of your own?

21 A. That's just what I alluded to. There  
22 had been a number of studies that indicated that  
23 people were aware of smoking risks and they had  
24 qualitative risk perception. But linking that  
25 to a quantitative reference point had never been

1 done.

2 Q. So you didn't have an opinion one way  
3 or the other?

4 A. No.

5 Q. How many hours have you worked or  
6 billed on your work on risk perception for the  
7 tobacco industry?

8 A. I have no idea.

9 Q. Do you have a guess, your best  
10 estimate?

11 A. Over the past 15 years, how many hours  
12 have I worked?

13 MR. ATKESON: No, he's asking on  
14 risk perception.

15 Q. I'm limiting it to risk perception.

16 MR. ATKESON: So not work on these  
17 cases.

18 Q. Let's include everything and make it  
19 easy.

20 A. I truly have no idea. Anything would  
21 be a guess, because you are going back through  
22 15 years of work on a variety of different  
23 things, not just AG cases but just consulting  
24 work in general, work on regulatory issues. I  
25 would rather not guess.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 Q. So you don't have any idea?

2 A. Well, since all my bills I think are

3 public, I think it's easier just to go through  
4 them and add it up, so I would do that if I  
5 wanted to do an accurate tally.

6 Q. How much do you think you have made?  
7 A. I would look at bills and add them up.  
8 I don't know.

9 Q. Well, what do you bill per hour?  
10 A. Now it's \$500 an hour.

11 Q. And that's the same for consulting work  
12 as for testimony?

13 A. Yes.

14 Q. Do you think that's a reasonable fee  
15 for someone of your academic credentials?

16 A. Maybe -- it may be low. I'm not sure.  
17 It's not out of line on -- on the high side. I  
18 am probably \$200 an hour less than what  
19 comparable people get for antitrust cases, for  
20 example.

21 Q. You've done a lot of work for the  
22 Hulverson law firm in St. Louis?

23 A. Yes.

24 Q. How much did you bill per hour when you  
25 worked for them?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

65

1 A. Four-twenty-five an hour was the last  
2 bill, I think.

3 Q. That was a straight billing rate, the  
4 same for consulting and research as for

5 testimony?

6 A. That's correct.

7 Q. Would it surprise you if I told you

8 that other economists of similar academic

9 credentials and standing as your own who are not

10 working for the tobacco industry bill

11 considerably less than you do?

12 A. Well, I'm -- I don't know what

13 everybody bills. Usually people don't advertise

14 it. But the people I know about, some of them

15 do charge more, people I regard of similar

16 standing.

17 Q. Who? Who charges more?

18 A. Alfred Kahn I believe charges more, for

19 example.

20 Q. Who is that?

21 A. He works for National Economic Research

22 Associates. He's a professor.

23 Q. He's the only one?

24 A. Richard Schmalensee,

25 S-C-H-M-A-L-E-N-S-E-E. Almost everybody who

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

66

1 works for a consulting firm ends up charging

2 more, because they get a piece of the action and

3 I don't. So that's a lot of economists.

4 MR. GRUENLOH: Why don't we take

5 about five minutes.

6

7 (Recess taken.)

8

9           Q.     Doctor Viscusi, I am handing you what's  
10     been marked as Exhibit 1399 to this deposition.  
11     Can you identify it for me?

12           A.     This is my expert statement, presumably  
13     in this case.

14           Q.     Did you write that statement or did  
15     someone else write it?

16           A.     I think this is just a recycling of an  
17     expert statement that we prepared for other  
18     litigation, and it was an interactive process  
19     involving Mr. Atkeson and myself.

20           Q.     What does "interactive process" mean?

21           A.     We would discuss what would go in it,  
22     he would type it up, send it to me; I would make  
23     changes and send it back.

24           Q.     So did he write that or did you write  
25     that?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

67

1           A.     I don't know if anybody wrote it, but I  
2     was responsible for the ideas. And I drafted  
3     some of the text, he drafted some of the text.

4           Q.     Do you agree with everything that's in  
5     that statement?

6           A.     I do.

7           Q.     I have tried to split up your opinions  
8     into three separate categories, and I hope that  
9     they work for you, too. The first is risk

10 perception, and that's the one I'm going to deal  
11 with first. The second one is early death or  
12 the death credit, regarding your work on  
13 longitudinal studies, the nursing home work.  
14 And the third one is your work on excise taxes.  
15 The second and third might sort of be combined,  
16 but that's how I split them up.

17 A. Okay.

18 Q. Let's talk about risk perception  
19 first. Can you summarize your opinion for me on  
20 risk perception?

21 A. The US population generally is aware of  
22 the smoking risks, as are smokers themselves.  
23 That's the main punch line. To the extent that  
24 we can assess whether they overestimate or  
25 underestimate the risk, the indications are that

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

68

1 people tend to overestimate the risks, and these  
2 risk perceptions also affect smoking behavior.

3 Q. Is that your opinion with respect to  
4 the Washington case, as well?

5 A. It's my opinion in general for any  
6 case.

7 Q. But in terms of this case, then, your  
8 opinion is that the residents of Washington  
9 overperceive the risk of smoking; correct?

10 A. I have no reason to believe that they  
11 are different.

12 Q. Do you have any reason to believe that

13       they are the same?

14           A.     Well, I could project out, controlling  
15       for the demographic mix, to the extent that I  
16       could do that, based on age and household size,  
17       gender and so on. So that potentially could be  
18       done.

19           Q.     Have you done that?

20           A.     No.

21           Q.     Why not?

22           A.     Nobody has asked me to.

23           Q.     And you wouldn't want to do it to make  
24       sure that your results are accurately measuring  
25       the Washington population?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

69

1           A.     Well, I ran regression results that  
2       parallel my '85 results, and you get the  
3       patterns of overperception of risks by the  
4       younger-age cohorts, so that these results  
5       suggest a controlling for education, for  
6       example, wouldn't make a huge difference.

7                   I have done splits based on smoking  
8       status, gender, education, and the results are  
9       quite robust. So it would be straightforward to  
10      do a projection for Washington.

11          Q.     Any other factors that you would want  
12      to control for?

13          A.     That's all we have. So I would control  
14      for all the factors in the Audits & Surveys

15 data.

16 Q. So let's go through them again to make  
17 sure I've got them all. Education, smoking  
18 status, gender, and what else?

19 A. Age, household size. There's a series  
20 of other variables that you could use to control  
21 for demographic characteristics, such as whether  
22 you own a personal computer or not, a series of  
23 background questions, and those would be useful  
24 to the extent that I could get counterpart  
25 information from the state of Washington.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

70

1 Q. But you haven't done that for the state  
2 of Washington; correct?

3 A. No.

4 Q. Do you plan on doing that for the state  
5 of Washington?

6 A. No.

7 Q. Do you think that your results would be  
8 any more accurate or reliable as they relate to  
9 the state of Washington if you did that?

10 A. If you are asking the question of  
11 whether people are aware of the risk broadly,  
12 whether they overestimate lung cancer risks, I  
13 don't think that would be sensitive. But if you  
14 are asking, is the assessed life expectancy loss  
15 due to smoking 11.5 years in the state of  
16 Washington or 11.4, then that kind of difference  
17 you could project out, based on the mix of the

18 people in the state.

19 Q. So is the answer yes or no, that it  
20 would be more or less reliable if you did that  
21 for the state of Washington?

22 A. It depends on the kinds of judgments  
23 you are trying to make. If you are only making  
24 broad judgments, which is what I am doing here,  
25 just making an overall assessment of awareness

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

71

1 of the risk as opposed to worrying about a  
2 refined pinpointing of the exact risk  
3 perception, then it won't make a difference.

4 Q. When you say you are looking at it  
5 broadly, does that mean you are looking at it in  
6 terms of the work that you have done in the  
7 past, and you are not tailoring it to the  
8 Washington case?

9 A. No. I'm looking at it in terms of the  
10 questions I might be asked. If any attorneys  
11 were going to ask the question, do people  
12 overestimate the risks of smoking, I can tell  
13 that answer based on these numbers. If you are  
14 going ask me a question, do people overestimate  
15 the risk of smoking -- of, let's say, lung  
16 cancer by 30 percent or 31 percent, then that  
17 kind of projection, you would want to control  
18 for the demographic mix.

19 Q. So are you saying that if you did

20 control for it, you think that it would not be a  
21 significant change in your numbers?

22 A. All the various cuts I have done in the  
23 data indicate that these findings are robust.  
24 Whether there would be a statistically  
25 significant effect, I'm not sure. But it would

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

72

1 not be a large effect.

2 Q. Do you know?

3 A. No, this is just my judgment based on  
4 all of the runs we have done with the data.

5 Q. Tell me about those runs.

6 A. Well, you see the outcome of the runs I  
7 have kept.

8 Q. What are you looking at right now?

9 A. The tables at the end of the "Public  
10 Perception of Smoking Risks" paper.

11 Q. This is the paper we were provided with  
12 today?

13 A. Yes. And there is at least one other  
14 table that was provided to your side regarding  
15 the education risk perception breakdowns for the  
16 Audits & Surveys data.

17 Q. What paper is that?

18 A. It's not a paper. One page.

19 MR. ATKESON: It's an exhibit to the  
20 Mississippi deposition. It's two pages we  
21 provided at the deposition, two pages.

22 Q. And that's --

23 MR. ATKESON: I don't know if they  
24 made them an exhibit, but we gave them to Mr.  
25 Young, and was it Millette? Whoever else did

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

73

1 the Mississippi deposition.

2 Q. Was that done as a part of your 1991  
3 survey, or was that work that you did separately  
4 on --

5 A. This is '97 survey work.

6 MR. ATKESON: They asked for any  
7 work papers that he had done, and he had runs,  
8 these two, education and -- I forget, now. So  
9 we said, "Well, since you've done this, give it  
10 to us and we will give it to them."

11 MR. GRUENLOH: That's been provided  
12 to us in the Washington case?

13 MR. ATKESON: Yes. It's on two fax  
14 sheets.

15 Q. I am handing you what's been marked as  
16 Exhibit 1400 to the deposition. Can you tell  
17 me, is this your most recent CV?

18 A. I'm pretty sure it's not. No, it's  
19 old. It's at least a year old.

20 Q. How many studies have you done in the  
21 last year that would have been added to that  
22 besides this one that I have in front of me?

23 Let's do it this way. That's the  
24 only one that I have. Can you -- do you have an

25 updated copy of your CV with you?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

74

1 A. No.

2 Let's see. Newer. But -- I have  
3 added three more articles since then, but this  
4 is newer.

5 MR. ATKESON: Why don't you take  
6 this, and he can tell you what the three  
7 articles are.

8 Q. That's fine. I assume these are the  
9 same except for some things you may have added  
10 on?

11 A. Yes.

12 Q. This might be a little tedious, but  
13 we'll go systematically so we won't miss  
14 anything. Can you go through this with me and  
15 tell me each of the studies that might be a  
16 basis of your opinion on risk perception that  
17 that you are using?

18 A. Well, a lot of things relate broadly to  
19 how people perceive risks and learn in a variety  
20 of contexts. Number 3.

21 Q. What page are you on?

22 A. The bibliography, book number three,  
23 deals with how workers learn about risks on the  
24 job. Book number 4, it comes up as well.

25 Q. Let's do it this way. Limit it for me

1 to the ones where you dealt with the risk  
2 perception of smoking.

3 A. That's easier.

4 Q. Okay.

5 A. The book number 10, second edition of  
6 Economics of Regulation and Antitrust, has some  
7 smoking material in it of mine. Book number 13  
8 you have in its entirety. Book number 16 is now  
9 published, and it deals extensively with smoking  
10 risk perceptions as well as the social costs of  
11 smoking. It has a different title. It's called  
12 "Rational Risk Policy." It's published by  
13 Oxford University Press. And that's available  
14 for purchase.

15 "Smoking Math," I haven't written a  
16 word of that book. On this vita we have  
17 "Cleaning Up Waste." That's about finished,  
18 but that's a new title now, and that book's  
19 done. Article 83, the one with Professor  
20 Hersch, that's 1990.

21 Q. And 83 is the first one?

22 A. Yes. So I may have started that  
23 research later than '86. I'm not sure when we  
24 started that, but it was before '90. There was  
25 a publication lag.

1 MR. ATKESON: Again, you are looking  
2 for articles here that talk about smoking and  
3 risk perception?

4 MR. GRUENLOH: Risk perception.

5 MR. ATKESON: Okay.

6 A. Ninety-four.

7 Q. Let's back up a second. I want to  
8 clarify something you just said. On 83, you  
9 said you may have started your research after  
10 1986?

11 A. It may have been '87. I'm not exactly  
12 sure.

13 Q. But seeing the date of this article  
14 leads you to believe that it would have been  
15 later than '86?

16 A. It might have been. It was a long  
17 publication lag, I know.

18 Q. Was it four years?

19 A. By the time you write the article, and  
20 we went through at least two rounds with the  
21 journal, I know it was over two years. Whether  
22 it was -- plus the time to do the research.  
23 From the time we wrote the papers, it was two  
24 years before it was published, so the paper was  
25 done before '88. When it was done I'm not sure.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

77

1 Ninety-four.

2 Q. 94. Okay.

3 A. 111. 127 is cigarettes. It probably

4 comes up in 136. I'm not exactly sure but  
5 maybe. 142. 158.

6 Q. This is --

7 A. 180.

8 MR. ATKESON: Do you want us to put  
9 a check mark next to them?

10 MR. GRUENLOH: Why don't you do  
11 that.

12 A. 182. 185. 190. 197. 200. 203.  
13 206. 207. Just an addendum to what I said  
14 earlier, I mentioned the results about flossing  
15 teeth in smokers. I believe that's in article  
16 207. 212. And that's it for these.

17 And the other thing I would add, I  
18 have changed the title of number 203 to -- I  
19 think that's right -- "Public Perception of  
20 Smoking Risks." And any new additions have  
21 nothing to do with smoking.

22 Q. Okay. I appreciate that.

23 Besides the information here, are  
24 there any other texts or articles on which you  
25 base your opinion on the risk perception of

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

78

1 smoking?

2 A. It depends on what comes up. But my  
3 opinion I can give just based on these things.

4 Q. Is there anybody else in the literature  
5 who you find authoritative on the subject?

6           A.     I quote some results by Joanie Hersch  
7     at various junctures.  If people raise youth  
8     understanding of certain things, she has done  
9     work on whether young people understand the  
10    addictive character or the habit-forming  
11    character of cigarettes.

12          Q.     Anybody else?

13          A.     That's all I can think of right now.

14          Q.     At the time you gave depositions in  
15    Minnesota, Texas, Florida, at the time you gave  
16    those depositions, you had not reviewed the  
17    complaints in those cases.  Have you reviewed  
18    them since?

19          A.     No.

20          Q.     What about the Washington complaint?  
21    Have you reviewed that?

22          A.     No.

23          Q.     Do you plan on it?

24          A.     No.

25          Q.     Why not?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

79

1           A.     My role is to simply ask -- answer the  
2     questions that are asked of me, based on my  
3     research.  I will let the lawyers figure out how  
4     that fits into what they are trying to relate.

5           Q.     You don't need it for a general idea of  
6     what this case is about?

7           A.     I can answer their questions just  
8     simply by responding to the questions, just as I

9 can answer your questions. I know the complaint  
10 contains recouping money for the state of  
11 Washington, so I know generally what the case is  
12 about.

13 Q. Do you believe that this case was  
14 brought on behalf of any individuals?

15 A. It's not my understanding that it is.

16 Q. What is your understanding of what this  
17 case is seeking to recoup?

18 A. Financial costs for the state of  
19 Washington related chiefly to Medicaid.

20 Q. Is it your understanding that Medicare  
21 is included in that claim?

22 A. No.

23 Q. Medicare is not included in that claim;  
24 that's your understanding?

25 A. I don't know whether it is or not. You

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

80

1 asked me what my guess would be. I have not  
2 reviewed the complaint, so I don't know what's  
3 included.

4 Q. What about the Mississippi, Minnesota  
5 Texas and Florida cases? Do you know what they  
6 were seeking to recoup in the case? Was it all  
7 Medicaid? Was Medicare included?

8 A. I don't know whether it went beyond  
9 Medicaid. I know that Minnesota involved Blue  
10 Cross/Blue Shield.

11 Q. Is it important to know what's included  
12 to you?

13 A. No, because I'm simply answering the  
14 questions regarding my research findings.

15 Q. Let me ask you this. Besides the  
16 things that you pointed out in your CV and the  
17 three surveys -- I call it three surveys, the  
18 '85, the '91 and the '97 -- and your book,  
19 Making the Risky Decision, is there anything  
20 else that you relied upon in this case to form  
21 your opinion that Washington residents  
22 overperceive the risks of smoking?

23 A. Other than what's in all my  
24 publications, no. So I will rely on everything  
25 in all of my publications.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

81

1 Q. Anything else in addition, other than  
2 what you have identified today?

3 A. Well, I go through a lot of other  
4 things. I look at changes in the tar level of  
5 cigarettes, which I believe is, are, a  
6 reflection of greater concern about health risks  
7 in cigarettes. I also review Readers Digest  
8 articles trends, Gallup opinion poll trends,  
9 government surveys on smoking risks. So all of  
10 these are part of the overall issue.

11 Q. You reviewed the literature, and you  
12 are also basing your opinion on the literature?  
13 I'm just trying to understand.

14           A.     Well, the tar work is generating  
15           statistical trends, and looking at those trends  
16           and showing that they -- indicating how they  
17           reflect the changing attitude towards  
18           cigarettes.

19           Q.     Let me go through these surveys. I am  
20           handing you what's been marked as Exhibit 1401.  
21           Can you identify that for me?

22           A.     This looks like the first Audits &  
23           Surveys report for 1985.

24           Q.     Who is that survey prepared by? Or at  
25           the request of? I'm sorry.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

82

1           A.     It was prepared at the request of  
2           Arnold & Porter; Jones, Day Reavis & Pogue; and  
3           Shook, Hardy & Bacon.

4           Q.     And is it your understanding that all  
5           of those law firms are representing the tobacco  
6           industry?

7           A.     Yes. Were -- or they were at that  
8           time.

9           Q.     Does that raise any concerns in your  
10           mind, given that you are relying upon that  
11           survey in your work?

12           A.     No.

13           Q.     On the front of that it says "prepared  
14           in anticipation of litigation." What do you  
15           understand that to mean?

16           A.     The Cipollone case, which was a lung  
17     cancer case. That was my understanding of why  
18     they ran the survey, but I was not involved at  
19     the time they commissioned the survey.

20           Q.     Do you think that law firms ordinarily  
21     engage in the development of such surveys, say,  
22     for academic purposes?

23           A.     Well, law firms don't have independent  
24     resources to run surveys, so any survey they run  
25     would relate to some work they are doing.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

83

1           Q.     Who authored that survey?

2           A.     Who wrote this report? I don't know.  
3     At the time, I talked to the people at Audits &  
4     Surveys, but I forget who the people were.

5           Q.     Do you think the lawyers at Arnold &  
6     Porter wrote that survey?

7           A.     No.

8           Q.     Do you think any of the lawyers on that  
9     report wrote it?

10           MR. ATKESON: When you say "wrote  
11     the survey," do you mean the questions or the  
12     results?

13           MR. GRUENLOH: Wrote the questions.

14           A.     I have no reason to believe they did.

15           Q.     Do you have any reason to believe they  
16     didn't?

17           A.     Judging from the survey questions,  
18     which I viewed as good, this is a well-written

19 survey. Whoever wrote it had some experience in  
20 survey design. So if the person happened to  
21 have a law degree too, that would be an added  
22 bonus.

23 Q. Is it possible to design a survey to  
24 elicit responses one way or the other: for  
25 instance, that may be favorable to a position or

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

84

1 unfavorable to a position? Is it possible to do  
2 that?

3 A. It's possible. It's all through the  
4 framing of your questions, so you would want to  
5 make sure that the question was a fair  
6 question.

7 Q. When you say the framing of the  
8 questions, how would you do that? Give me an  
9 example.

10 A. You know, if you said something like,  
11 "The cigarette industry, which we all know to  
12 produce dangerous products," et cetera. In  
13 other words, if you editorialize as part of the  
14 question and give an opinion as part of the  
15 question, then that would tilt it one way. If  
16 you said, "The cigarette industry, which we all  
17 know to be one of the leading industries in the  
18 United States," that would tilt it in the other  
19 way. So there are ways in which you could try  
20 and, you know, discourage answers or encourage

21 answers in particular ways.

22 Q. So if you did something to allude to  
23 the response, the intended response, in the  
24 question, that would be one way of doing it?

25 A. That's not what I said. I said, if you

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

85

1 try to characterize and give an opinion about  
2 the industry. But if you told people the  
3 answer, sure. That matters, too. If you tell  
4 people the answer as part of the answer, that  
5 could affect things.

6 Q. Okay. How else?

7 MR. ATKESON: Are you asking for a  
8 list of ways in which you can screw up question-  
9 asking?

10 Q. I am asking for some ways which you may  
11 know or what you think would elicit the desired  
12 responses if a party was attempting to do that.

13 A. You could write surveys that take  
14 advantage of people's ignorance. So if you ask  
15 them to make judgments where they need other  
16 information to make reliable judgments, then  
17 that would be one way of distorting the  
18 responses.

19 Q. Is there a scientific term or a term of  
20 art for what I'm describing?

21 A. Framing?

22 Q. Framing? Is that just one way to do  
23 it, or is that the way that you would classify

24 all of this?

25 A. I don't know of any one term that

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

86

1 characterizes bad surveys. And you've cut a  
2 pretty broad swath through bad surveys here.

3 Q. What about survey bias? Is this an  
4 example of survey bias, or is that just a narrow  
5 part of one way of how you would go about  
6 eliciting a desired response?

7 A. Bias would be kind of like --  
8 editorializing would be a bias. You can bring  
9 about bias with the other factor I mentioned  
10 earlier, which is if people need some  
11 information to make reliable judgments as part  
12 of the question and you withhold that  
13 information, that can cause a bias.

14 Q. Would it matter to you if the lawyers  
15 at Arnold & Porter or any of the lawyers that  
16 have their name on the front sheet of that  
17 survey, would it matter to you if they had any  
18 part in formulating the questions or any part in  
19 the conclusions?

20 A. No, because I judge the survey at face  
21 value. I assess the reasonableness of the  
22 question. I also devised alternative ways of  
23 asking the question and show that the results  
24 were quite robust in a survey that I  
25 administered that they had nothing to do with.

1       So I have complete confidence in the survey.

2           Q.     When were those done?

3           A.     '90 to '91 was the time period when I  
4       ran my alternative ones.

5           Q.     Did you do any before that?

6           A.     I didn't run any other subjects, no.

7           Q.     Those are sensitivity analyses? Is  
8       that what they are?

9           A.     That's what I called them. But it was  
10       also a way -- after I started doing the work  
11       with this, people would say, what about, you  
12       know, lung cancer mortality, for example. So  
13       what I wanted to do is try to nail down all --  
14       what I viewed to be the three main issues  
15       regarding the survey.

16          Q.     Have we been provided with all of the  
17       -- have you provided to your counsel all of the  
18       raw data on the sensitivity analyses?

19          A.     There is no data, but everything is in  
20       my book.

21                   MR. ATKESON: The raw data he's  
22       talking about is the phone surveys that we  
23       talked about earlier. He said he didn't have  
24       the figures.

25          Q.     You don't have those anymore?

1           A.     No, there were some that we may have  
2           dug out for Minnesota. But whatever it was,  
3           they were lost shipping them back to me, so I  
4           don't have them anymore.

5           Q.     Do you have a list of the questions or  
6           any notes or anything?

7           A.     I think they're published in the book.  
8           I think the questions are published in the  
9           book.

10          Q.     Okay. Let me add one more condition or  
11          what-if. What if you were to find that any of  
12          the lawyers listed on the front page of that  
13          survey had intended to intentionally destroy the  
14          results of that survey if the results came out  
15          unfavorable to the tobacco industry? Would that  
16          change your opinion about the reliability of the  
17          survey?

18          A.     No, because the survey survived that  
19          test. Here is the data, and I can judge --  
20          here are the results. And I can assess whether  
21          the questions make sense, whether they are  
22          likely to elicit reasonable assessments of the  
23          risk, and I have also tested their robustness.  
24          So what their intent was doesn't affect my  
25          assessment of how good these data are.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1           Q.     So you are relying solely upon your  
2           assessment?

3           A.     No, I also ran alternative versions of  
4     the questions, and we did the -- well, I did  
5     that both in the North Carolina, and we have  
6     replicated that nationally.

7           Q.     Were the questions or the sensitivity  
8     analyses that you did, aside from the fact that  
9     they are reported in your book, were they  
10    peer-reviewed?

11          A.     They are in my Oxford University Press  
12    book, which was peer-reviewed by several  
13    professors, as well as by the Oxford University  
14    Press board, which includes, I think, chiefly  
15    academics.

16          Q.     When the peer reviewers looked at that,  
17    did they look at -- were they able to look at  
18    the raw data? Did you have the raw data back  
19    then to give to them?

20          A.     Nobody has asked me for my raw data. I  
21    presented enough descriptive statistics that  
22    they could find out everything they wanted to  
23    know.

24          Q.     Did you ever -- did anyone ever  
25    specifically review the questions, either peer

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

90

1     review or otherwise?

2           A.     Oh, yes, because the text of the Audits  
3     & Surveys questions is included in my book and  
4     -- as are all of my question formulations. So

5       they reviewed all of those questions, as well as  
6       knowing the fact that the Audits & Surveys data,  
7       or that survey, was commissioned by law firms.

8       Q.     Where would I find those reviews?

9       A.     Well, I don't think I have them  
10      anymore. This is ten years ago, whatever, 1990,  
11      '91.

12      Q.     How would I locate them?

13      A.     You can't locate them. So that this is  
14      something that was reviewed, and a lot of the  
15      reviews, like what was said at the Oxford  
16      University press meeting, I don't know. These  
17      are internal memorandums of Oxford University  
18      Press. All I know is they approved this book  
19      for publication. It's the leading university  
20      press in the world.

21      Q.     So neither the reviews or raw data on  
22      the actual questions is available anymore?

23             MR. ATKESON: For the -- the raw  
24      data we have given you for the '85 questions.

25      A.     And we have replicated the North

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

91

1       Carolina survey nationally, and you have all  
2       that raw data.

3       Q.     Did the reviewers make any changes or  
4       comments or anything before publication?

5       A.     Sure. I did lots of changes in  
6       response to reviewers' comments.

7       Q.     But you don't have any notes or any

8 data available on those changes, or what they  
9 would have been?

10 A. I write too many things to save notes  
11 on every change that I have ever done.

12 Q. Let's go to the middle survey, the one  
13 that you did in North Carolina. That was  
14 conducted in 1991; correct?

15 A. It may have started in '90, but '91 was  
16 when it was wrapped up, so I call it the '91  
17 survey.

18 Q. By the way, going back to this first  
19 survey, did you have any input into formulating  
20 the first -- the questions of that first 1985  
21 survey?

22 A. Absolutely none.

23 Q. And you don't know who did?

24 A. No.

25 Q. Your '91 survey, you devised those

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

92

1 questions; correct?

2 A. That's correct.

3 Q. Did you use the 1985 survey as a basis  
4 for your '91 survey?

5 A. Well, the purpose was to do a  
6 sensitivity test, so I looked at how different  
7 wordings of the question -- would they matter.

8 Q. So the questions that you asked in the  
9 '91 survey were based upon the questions that

10       were asked in the '85 survey; correct?

11           A.     No, I didn't use the exact questions.

12       The intent of the survey was to try and see if

13       you got similar results with alternative ways to

14       elicit the objective risk perceptions.  So I

15       didn't want to use the exact same questions.

16       But on the other hand, I would want to know how

17       the new results illuminated the accuracy of the

18       '85 results.

19           Q.     Did anyone else assist you in

20       formulating the questions in that '91 survey?

21           A.     No.

22           Q.     Did you have any contact with any of

23       the lawyers for the tobacco industry during that

24       time?

25           A.     Absolutely none.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

93

1           Q.     And you alone were responsible for

2       devising those questions?

3           A.     That's correct.

4           Q.     Did you have any conversations with

5       lawyers for the tobacco industry either before

6       or after you designed the survey about the

7       questions?

8           A.     None.

9           Q.     So to this date, you have never had any

10       conversation with any lawyer --

11           A.     Between then and the publication of the

12       results.  So I didn't talk to anybody about the

13 -- sure, we've talked about it now, but this is  
14 ten years later or -- seven years later.

15 Q. Are there any drafts of the 1991 survey  
16 leading up to the finished product?

17 A. No. What you have is what's in the  
18 book. What exists is in the book.

19 Q. So there were no drafts with the  
20 questions or anything that you have available?

21 A. No.

22 Q. Do you know if there were any drafts of  
23 the 1985 survey that was done by Audits &  
24 Surveys?

25 A. I don't know. I was not provided with

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

94

1 any.

2 Q. Would you want to see them if they were  
3 out there?

4 A. I'm happy with what I've got. If they  
5 have other test results for other questions, I  
6 would look at them.

7 Q. Did you ever ask?

8 A. I don't think they have anything else,  
9 so I didn't ask if they had anything else lying  
10 around. It never dawned on me there was  
11 anything else.

12 Q. But you didn't ask?

13 A. No, it never crossed my mind.

14 Q. How many data points or respondents did

15       you have in your 1991 survey?

16           A.     A little over 200, I think. I would  
17       have to look it up. It's about that.

18           Q.     Do you think that 200 is a  
19       statistically valid sample when you are using  
20       that survey as the basis for your opinion on a  
21       national population?

22           A.     Well, North Carolina is a leading  
23       tobacco-producing state, so I would have  
24       thought, if anything, that survey would have led  
25       to an underassessment of the risk as compared to

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

95

1       a national sample. So you could get different  
2       results with a national sample, and that's one  
3       of the reasons why the '97 national survey was  
4       run.

5           Q.     Let me ask you this. Can you test a  
6       question before it's asked to find out what the  
7       answer is going to be?

8           A.     Can you pretest it?

9           Q.     Yes.

10          A.     That essentially means running a  
11       survey, getting the answer -- yes, you can  
12       always do that.

13          Q.     So you can test it before you decide to  
14       include it in a survey?

15          A.     Sure.

16          Q.     Did you do that?

17          A.     We made sure that people could

18 understand the question.

19 Q. How did you do that?

20 A. Ran a series of pretests with  
21 predominantly secretaries that we could find,  
22 just to see if they could understand the  
23 question wording, and did they have trouble  
24 understanding the wording, did the question make  
25 sense to them. But it was not in any sense what

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

96

1 the answer was. We didn't really care if they  
2 said six or twelve or whatever.

3 Q. Did Audits & Surveys, that you know of,  
4 pretest any of their survey questions?

5 A. Not that I know of.

6 Q. Did you ask?

7 A. No.

8 Q. Would that be important to know?

9 A. No, I'm judging the survey questions  
10 they ran, which I consider to be good  
11 questions.

12 Q. Getting back to the '91 survey, was  
13 that a random sample?

14 A. No, it's not a national random sample.  
15 It was people in the Durham, North Carolina  
16 area. So it was a local sample.

17 Q. You say Durham, North Carolina area.

18 Was it from any particular school or --

19 A. No, these were adults. It was a survey

20 of adults randomly called in that area.

21 Q. Did you have a bigger pool that you  
22 started from? For instance did you call a  
23 thousand people and you only got 200 people?

24 A. I don't know the exact answer rate, but  
25 the participation rate, once we made contact,

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

97

1 was quite high, because it was a very short  
2 survey.

3 Q. What was the participation rate?

4 A. I don't recall the percent, but it was  
5 a very high percent in terms of the hits once we  
6 made contact. We did very well.

7 Q. Can you summarize for me what the  
8 results or the findings of that '91 survey were?

9 A. Changing the lung cancer question to  
10 lung cancer mortality doesn't have a big  
11 effect. People overestimate the mortality risks  
12 of smoking, the total mortality risks of  
13 smoking. And people also overestimate total  
14 life expectancy loss associated with smoking.

15 Q. I'm handing you what's been marked as  
16 Exhibit 1402 to the deposition. Can you  
17 identify that for me?

18 A. This is the 1997 Audits & Surveys  
19 report on the survey.

20 Q. And that's the third of the three  
21 surveys --

22 A. That's correct.

23 Q. -- upon which you relied?  
24 A. That's right.  
25 Q. On the front page, that doesn't say

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

98

1 "prepared in anticipation of litigation," like  
2 the 1985 one did. What's your understanding of  
3 why that survey was prepared?

4 A. I don't know whether that has any real  
5 importance, omitting the "anticipation of  
6 litigation." It was prepared largely to see  
7 whether my North Carolina results generalized  
8 nationally, and exactly how they did.

9 Q. So that survey was prepared to test  
10 your survey?

11 A. Well, mostly to expand the sample size  
12 to a random national sample instead of a local  
13 sample.

14 Q. Do you think Arnold & Porter spent  
15 money on that for some academic pursuit?

16 A. I assume that they spent it because it  
17 was related to their business activities, which  
18 is working on tobacco-related issues.

19 MR. ATKESON: Among other things.

20 Q. So would it be fair to say that that  
21 survey, the same as the 1985 survey, was  
22 prepared in anticipation of litigation?

23 MR. LEITER: You are asking for a  
24 legal conclusion.

25 Q. Do you know what "prepared in

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

99

1 anticipation of litigation" means? If not, tell  
2 me which word you don't.

3 A. I assume that they did it to get  
4 national results that in effect would generalize  
5 my North Carolina results. And it could be for  
6 litigation; it could have been for some  
7 regulatory matter involving cigarettes. But  
8 almost assuredly it was for something relating  
9 to either legal or regulatory action.

10 Q. Do you know who wrote the questions to  
11 that survey?

12 A. Well, the mortality risk question I  
13 believe is my wording. The lung cancer risk  
14 question I believe replicates the earlier one.  
15 And the life expectancy question is a rewording  
16 done by the Audits & Surveys person who I spoke  
17 to.

18 Q. So --

19 MR. ATKESON: You have been provided  
20 with all of the drafts of those questions.

21 MR. GRUENLOH: All right.

22 Q. Have you seen the drafts of those  
23 questions?

24 A. I believe I have seen some things. I'm  
25 not sure I have seen everything.

MAHANEY REPORTING SERVICES

1           Q.     What if you were to find out that the  
2     lawyers at Arnold & Porter had an active role in  
3     writing the questions in that '97 survey? Would  
4     that change your opinion as to the reliability  
5     of that survey?

6           A.     If there was an active role, it wasn't  
7     much for them to do, because these questions are  
8     very, very close to my questions and the ones in  
9     the 1985 survey. So there was not much squiggle  
10    room for them to take this so-called active  
11    role.

12          Q.     Are there any differences between the  
13    questions asked in the 1985 survey as compared  
14    to the 1997 survey?

15          A.     Yes.

16          Q.     What are those differences?

17          A.     Well, the mortality risk question was  
18    added, and that's the question I had in my 1991  
19    survey. The life expectancy question was added,  
20    which parallels my life expectancy question but  
21    is not exactly the same.

22          Q.     What's your understanding of why those  
23    questions were added to the '97 survey?

24          A.     Because these things were in my 1991  
25    survey, and the whole purpose of this study was

1 to see if my 1991 survey results generalized  
2 nationally.

3 Q. You said earlier something to the  
4 effect of, it didn't matter to you the  
5 motivation of the questioner or what motivation  
6 may be behind the question as long as the  
7 question is a good question. What is a good  
8 question? Who decides what a good question is?

9 A. I do, in this case, based on my review  
10 of it, based on the fact I have been running  
11 risk questions for EPA for over a decade.

12 Q. Are there some criteria to your  
13 deciding what's a good and a bad question?

14 A. Well, I think in this case the  
15 principal criterion is whether you are eliciting  
16 risk information in a way that people can  
17 understand and think about, and the natural way  
18 that I found people think about probability is  
19 with respect to a reference population such as a  
20 hundred. And people, in giving the risk  
21 responses, no matter what denominator we tried,  
22 always tended to answer in percentage terms.

23 So if you asked them, out of the  
24 whole population of North Carolina, how many  
25 people would get sick from E. Coli, people would

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

102

1 say three percent. They wouldn't give me an  
2 absolute number. So that's why this percent  
3 approach seemed to be the most reasonable.

4 Q. Is that the only criterion for deciding  
5 what a good question is?

6 A. Well, you also want it to achieve your  
7 intended purpose, in addition to being  
8 understood. And the intended purpose here is to  
9 have an answer that will enable you to make an  
10 assessment as to whether risks are overassessed  
11 or underassessed. So there could be other good  
12 questions, but they may not be good for that  
13 purpose.

14 Q. Give me an example of what a bad  
15 question for this purpose would be.

16 A. Okay. Well, a bad question is asking  
17 somebody, "Do you think smoking is risky?" And  
18 if the purpose is to determine whether people  
19 overassess or underassess the risk, we don't  
20 know from the answer what it means for smoking  
21 tobacco: somewhat, very, not at all risky, which  
22 are usually the kind of answers people give. So  
23 that is not a question that is a good question  
24 for this purpose.

25 Q. I'm handing you what's been marked

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

103

1 Exhibit 1403 to the deposition. Have you seen  
2 this before?

3 A. Yes, I have seen this before. I  
4 remember the mental illness change to 5, to flat  
5 feet.

6 Q. On the fax cover sheet of that, who  
7 does it say it's from and who does it say it's  
8 to?

9 A. It's to Don Pace from Tim Atkeson.

10 Q. So who do you think made that change,  
11 to flat feet from mental illness?

12 MR. LEITER: You are asking if he  
13 knows, or to guess?

14 Q. Do you know who made that change?

15 A. No. I could guess.

16 Q. Well, based upon who that's from?

17 A. Somebody at Arnold & Porter in Denver,  
18 Colorado.

19 Q. Why do you suppose they changed that?

20 MR. LEITER: Again, you are asking  
21 him if he knows, or to guess?

22 A. My guess is the same reason I was asked  
23 this question in the Florida deposition, "Does  
24 cigarette smoke cause mental illness?" I said I  
25 didn't know, because if you are talking about

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

104

1 people classifying habituating behavior, if you  
2 are going to call that a mental illness, that  
3 could be ambiguous. So flat feet is clearly a  
4 way to detect whether, you know, people have --  
5 are paying attention to the survey, or have a  
6 strong anticigarette bias. So it's a cleaner  
7 test of that without having to define a term.

8 Q. So which one is a better question? The

9 one with mental illness or the one with flat  
10 feet?

11 A. I like flat feet, because it's  
12 cleaner. People know what flat feet is, and you  
13 don't have to define the scope of what mental  
14 illness is.

15 Q. Does smoking cause flat feet?

16 A. No.

17 Q. Are you answering in terms of  
18 probabilities or are you answering --

19 MR. ATKESON: As a pharmacologist?

20 A. In my experience I am confident, I am  
21 willing to go to a probability of 1.0.

22 Q. What about mental illness? Does  
23 smoking cause mental illness?

24 A. Not the way I would interpret mental  
25 illness, but it does have psychological and

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

105

1 physical effects.

2 Q. What was the purpose of that question,  
3 the flat feet question?

4 A. Well, the main purpose is to -- you  
5 pick up two kinds of people. People who would  
6 have kneejerk smoking-causes-everything  
7 responses as well as people who may not be  
8 taking your survey instrument seriously, as well  
9 as people who are just not paying attention. So  
10 there's three things.

11 Q. Do you think that was an adequate  
12 control for that?

13 A. Well, it's one control. Another  
14 control is to look at the consistency across  
15 answers. For example, do people who assess a  
16 high lung-cancer risk also assess a high  
17 mortality risk? So that would be an internal  
18 consistency check.

19 Q. Did you do that?

20 A. That's one of these tables. There's a  
21 cross-tab of lung cancer and mortality risk  
22 perceptions.

23 Q. Were those questions, the mortality  
24 questions, asked in a separate survey or the  
25 same survey?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

106

1 A. The same survey.

2 MR. ATKESON: You are talking about  
3 the 1997 survey? The same survey as the flat  
4 feet survey?

5 MR. GRUENLOH: I'm asking about the  
6 results that he just told me that were  
7 reported.

8 A. (continuing) Same survey.

9 Q. But would it make any difference if  
10 they were in the same survey as opposed to a  
11 different survey?

12 A. A different survey would have different  
13 people, so you don't have a consistency check.

14 Q. Are there any other checks that you  
15 would do?

16 A. I would run the regression equations  
17 for lung-cancer risk perception, as well as  
18 other regression equations. And they parallel  
19 the 1985 results, so that's a consistency  
20 check. These are entirely different samples.

21 Q. Anything else?

22 A. That's all I did. I have also run my  
23 1991 survey, which closely paralleled this, with  
24 a lot of different variants.

25 Q. Let me ask you this. Aside from

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

107

1 looking at the grouping of questions -- I guess,  
2 responses -- is there any other way to determine  
3 whether or not the responses were completely  
4 random?

5 A. They weren't random, because I have run  
6 regressions and shown systematic relationships.

7 Q. Did you do anything else besides  
8 regressions?

9 A. I ran cross-tabs. We looked at the  
10 individual data responses. We have run controls  
11 for flat feet. We have done analyses with flat  
12 feet and without flat feet. The results are  
13 quite robust to different variations.

14 Q. And all of that material has been  
15 provided to us?

16           A.     No, I don't save every run I have  
17     done.  Basically I do the runs, and I have  
18     tossed them.  So the things that I save are the  
19     tables that I have included in papers, but I  
20     don't save all of my backup runs.

21           Q.     So is there anything that's been  
22     provided to us that would allow us to check the  
23     robustness of those runs except for the -- just  
24     the results that you have reported in your  
25     tables?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

108

1           A.     You have the data.

2           Q.     I thought that was what my question was  
3     to you before.

4           A.     You have the data.  You can do with it  
5     whatever you want to check.

6           Q.     So the actual raw data?

7           A.     You have all the raw data for '97.

8                   MR. ATKESON:  And '85.

9           Q.     What about the regression formulas?

10          A.     These are in the book.  They are in the  
11     book for '85, or in my various articles.  And  
12     the '97, they are here, these results.  I mean,  
13     I didn't save all of them.  I ran lots of  
14     things.

15          Q.     So if we wanted to duplicate your tests  
16     that you have run to check on the robustness,  
17     could we do that exactly, so --

18          A.     No, I didn't write down every test I

19 did, and I didn't record every regression I ever  
20 ran. You could replicate these, all these  
21 tables.

22 Q. The '85, the '91 and the '97 surveys,  
23 the three surveys, those look at the risk  
24 perceptions of the population at a given time;  
25 is that correct?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

109

1 A. That's correct.

2 Q. Are those longitudinal or  
3 cross-sectional studies?

4 A. Cross-sectional.

5 Q. What's a longitudinal study?

6 A. I will interview you in 1995, and I  
7 will come back to your house in 1996 and ask you  
8 some questions. I will come back in 1997. So  
9 you track people over time.

10 Q. Why did you go cross-sectional?

11 A. Well, I didn't really much care how  
12 risk perception changed from 1997 to 1998, so  
13 there's no real reason to track them over time.  
14 There was no major experiment taking place in  
15 terms of risk information that was being  
16 disseminated that would be making it interesting  
17 to monitor a change in risk perceptions.

18 Q. Could you have done it?

19 A. Sure. You can just -- but you have to  
20 establish a group of people there that you can

21 keep track of, so you can't do it with a random  
22 telephone survey. It's going to be more  
23 expensive, because people have to sign up to be  
24 followed.

25 Q. Let me ask you, could you have actually

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

110

1 done it? Did you have the funding?

2 A. I didn't ask. I didn't have the  
3 funding to do more than I did in 1991. I had no  
4 outside funding for that.

5 Q. Would a longitudinal study have been  
6 much more difficult to do?

7 A. It would have been more expensive,  
8 yes.

9 Q. None of these studies, these three  
10 studies, attempt to measure the risk perception  
11 of the public in the 50's, the 60's, the 70's;  
12 is that correct?

13 A. That's correct.

14 Q. It's only 1985, 1991 and 1997; correct?

15 A. Those are my survey years.

16 Q. It is going to be your opinion that  
17 these studies may be applied to accurately  
18 assess the risks -- and when I say "these  
19 studies," I mean those three surveys -- to  
20 accurately assess the risk perception of the  
21 Washington population in the 50's, 60's, and  
22 70's?

23 A. Well, we can make some judgments

24 regarding the level of risk perception and how  
25 much they seem to be changing. From 1985 to

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

111

1 1997, there was not a stark shift in risk  
2 perceptions. So if you think that risk  
3 information has been gradual and there's no  
4 critical event that changed it, then you would  
5 be able to extrapolate backwards and say, ten  
6 years before that, risk perceptions probably  
7 weren't that much different either, because from  
8 1975 to 1985 there was no major salient event  
9 that should change the world.

10 Q. So it is going to be your opinion that  
11 your findings in those three surveys, 1985, '91  
12 and '97, can be applied back in time to the  
13 50's, 60's, and 70's, of the Washington  
14 population?

15 A. To the extent that you believe that the  
16 information dissemination has been fairly  
17 gradual in the immediate period before that,  
18 yes.

19 Q. In your Mississippi deposition, you  
20 gave the opinion that the Surgeon General's  
21 Reports didn't do much to influence the risk  
22 perception of the public. Do you remember that?

23 A. What I probably said was that people  
24 don't read the Surgeon General's Reports. That  
25 doesn't mean that they don't read the paper. Do

1       you recall the exact wording, what I allegedly

2       --

3           Q.     I'm representing to you that you said  
4       that the Surgeon General's Reports do not do  
5       much to influence the perceptions of the public  
6       as it relates to smoking.

7           A.     Right, people don't read the Surgeon  
8       General's Reports per se.

9           Q.     That's what you meant by that?

10          A.     Right.

11          Q.     Nothing else?

12          A.     That's correct.

13          Q.     What's the difference between a  
14       qualitative question and a quantitative  
15       question?

16          A.     A quantitative question is, how much  
17       money do you make? A qualitative question would  
18       be, are you rich or poor?

19          Q.     Which one is better?

20          A.     It depends on what you are trying to  
21       get at. If you are trying to figure out the  
22       average income in the state of Massachusetts,  
23       you would want to know exactly what their income  
24       is, not going around asking people, "Do you feel  
25       rich or poor?"

1 Q. And you believe qualitative is better,  
2 in your opinion?

3 A. Quantitative?

4 Q. Quantitative.

5 A. Yes.

6 Q. Quantitative. And that's what you  
7 used, quantitative?

8 A. That's correct.

9 Q. Do you think that people think with  
10 numbers generally? Do you think people think in  
11 terms of numbers when you ask them a question?

12 A. I think you can frame it in a way that  
13 can get them to think naturally in terms of  
14 numbers.

15 Q. What about generally, though? Do you  
16 think people think in term of numbers?

17 A. It depends on how hard the numbers  
18 are. I think in terms of simple percents,  
19 shares, I don't think it's hard to get people to  
20 think in those terms.

21 Q. In one of your articles -- I don't  
22 remember which one it is. I can find it if you  
23 would like, but it was on the first page -- you  
24 wrote, "The more information the better is one  
25 of the basic tenets of economics."

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 Do you remember that?

2 A. Yes.

3 Q. What article was that in; do you  
4 recall?

5 A. No, but it was, I think it was my  
6 "Consumer Processing of Hazard Warning  
7 Information" in the Journal of Risk and  
8 Uncertainty.

9 Q. I don't want to look for it. Is that  
10 still your opinion?

11 A. That's right. That more information is  
12 better?

13 Q. Yes.

14 A. That's the tenet of economics. The  
15 whole purpose of economics is to know more.  
16 That's not necessarily true for how people  
17 process information.

18 Q. It isn't true that more information is  
19 better?

20 A. It's a theoretical assumption; it's not  
21 an empirical result.

22 Q. Do you agree with that assumption?

23 A. No, that's -- in terms of a theory, if  
24 people have unlimited information-processing  
25 capabilities, more information is always

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

115

1 better. But what we demonstrated in that  
2 article is that more information actually can  
3 confuse people. It causes problems of  
4 information overload.

5 Q. What was the difference in risk  
6 perception in the 1985 survey as compared to the  
7 1997 survey?

8 MR. ATKESON: On what issue?

9 MR. GRUENLOH: Lung cancer.

10 A. Full sample, in 1985 was 4.3. 1997,  
11 .47. For smokers it was .37 in 1985, .40 in  
12 1997.

13 Q. So people perceived there to be a  
14 greater risk of lung cancer in 1997 as opposed  
15 to 1995; correct?

16 A. It went up by .03. I'm not sure if  
17 these differences were statistically  
18 significant.

19 Q. But there was an increase in the  
20 perception?

21 A. That's true.

22 Q. Would you agree that since the 1960's,  
23 the press has taken a more active role in trying  
24 to communicate the risks that are associated  
25 with smoking?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

116

1 A. I would go further and say that the  
2 press has not necessarily tried to communicate  
3 the risks but have often taken an antismoking  
4 position that goes beyond risk communication.  
5 So I would say that it's more proselytizing.

6 Q. I'm not sure that answers my question.

7 In 1997 did the press take a more active role or  
8 a less active role in communicating the risks,  
9 the perceived risks, as compared to 1960? What  
10 do you think?

11 A. Well, that's the thing I answered. I  
12 think the press is being much more active now,  
13 but it's not necessarily just risk  
14 communication. Much of what you see is  
15 attacking the cigarette industry and demonizing  
16 it, which is not the same as risk communication.

17 Q. What do you think the general trend has  
18 been as it relates to risk perception?

19 A. I think it's been up.

20 Q. Up over time?

21 A. Up over time.

22 Q. So you think people perceived a greater  
23 risk in the 1960's as compared to 1997, or  
24 lower?

25 A. Lower in the 60's compared to 1997.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

117

1 Q. So you would agree with the statement  
2 that the risk perception of the public has  
3 increased?

4 A. Well, it increased by a little bit,  
5 even in my data. So yes, the evidence suggests  
6 that it has gone up.

7 Q. Would you agree that the trend in risk  
8 perception mirrors what I called dissemination  
9 of information by the press to the public, you

10 called something else, in your prior opinion?  
11 Would you agree that that mirrors that?  
12 A. No, it's not just risk information.  
13 That fact that we are more and more affluent now  
14 makes us more sensitive to health risks than we  
15 were before. I think we are more safety-  
16 conscious, more generally. So you may value the  
17 risks more. They may get more press coverage,  
18 apart from informational reasons, as well.  
19 Q. But there's more information out there  
20 now than there was back in the 60's; right?  
21 A. Yes, we know more now than we did then.  
22 Q. And the people's perception of the  
23 risks of smoking is greater now than it was back  
24 in the 60's; correct?  
25 A. It's probably true. I don't know for

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

118

1 sure, but that's probably true.  
2 Q. Well, based upon your data, you know?  
3 A. It's greater now than in '85. I'm not  
4 sure if it's statistically significant.  
5 Q. What would statistically significant  
6 be?  
7 A. You can't tell that off the top. You  
8 have to run a significance test to see whether  
9 they are different or not. I report some of  
10 them in the paper, but I'm not sure I reported  
11 that one.

12 Q. The change in risk perception from 1985  
13 to 1997 that we discussed before regarding risk  
14 perception relating to lung cancer, is that  
15 change statistically significant?

16 A. Which change?

17 Q. The change from 1985 to 1997 in the  
18 risk perception as it relates to lung cancer,  
19 the .37 to .40, I think?

20 A. The lung cancer risk assessments were  
21 significantly higher in 1997 for the full  
22 sample, but not for current smokers. These  
23 results are reported on page 13.

24 Q. Why for the full sample?

25 A. For the full sample?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

119

1 Q. Why for the full sample and not for  
2 smokers?

3 A. That difference was statistically  
4 significant. I think it was a bigger  
5 difference. So one -- was it .02, .03? In any  
6 event, the significance test came out that way.

7 Q. And you did that test?

8 A. My computer programmer did.

9 Q. Is that reported in there?

10 A. Yes.

11 Q. Okay. Which of the three surveys, the  
12 '85, '91 or 1997, study the Washington Medicaid  
13 population?

14 A. None of them.

15 Q. Did any of the three have any members  
16 of the Washington Medicaid population in them?  
17 A. Perhaps.  
18 Q. Do you know?  
19 A. No.  
20 Q. Is it your opinion that Washington  
21 residents overestimate -- overperceive the risks  
22 of smoking?  
23 A. Yes.  
24 Q. On what do you base your opinion?  
25 A. The results for the nation as a whole,

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

120

1 which do not vary starkly by demographic mix,  
2 indicate substantial overperceptions of the  
3 risk, and these results are robust according to  
4 region; they are robust by educational group,  
5 they are robust by gender, smoking status. So  
6 no matter how you cut the data, people  
7 overestimate the risk.  
8 Q. I just want to make sure I understand  
9 what you are doing. You have taken national  
10 data and you have applied that to a subset, the  
11 Washington population?  
12 A. You are asking me to do that. I'm not  
13 sure --  
14 Q. Have you done that or have you not?  
15 A. No, I have not done any specific  
16 Washington analysis.

17 Q. So you don't know whether Washington  
18 residents overperceive the risks of smoking?  
19 A. Well, we know that nationally they do,  
20 and we know that the results indicate  
21 overperception regardless of age, education,  
22 gender, all the various demographic controls you  
23 would do. So I cannot envision anything you  
24 could do to change that result.  
25 Q. But have you done that test for the

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

121

1 Washington population?  
2 MR. ATKESON: Asked and answered.  
3 A. I have done it nationally for the  
4 various demographic groups, as well as  
5 controlling for these various things, and the  
6 results are robust.  
7 Q. You have done it nationally, but you  
8 haven't done it for the Washington population?  
9 A. The Washington population is part of  
10 the sample.  
11 Q. Specifically for the Washington  
12 population?  
13 A. I haven't broken them out separately.  
14 Q. Do you plan on doing that?  
15 A. Nobody has asked me to. I think that  
16 without -- it would be a very small sample. You  
17 probably couldn't get much in terms of  
18 statistical significance from that.  
19 Q. How big of a sample would you have to

20 have from Washington to determine whether or not  
21 the results could be applied, your national  
22 results could be applied to the Washington  
23 population?

24 A. I have no idea. I mean, that's  
25 something that -- sampling questions in terms of

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

122

1 sample size would be something I would want to  
2 think about and actually look at, you know, the  
3 answers, whether you are trying to get at  
4 subpopulations or not. So if you are trying to  
5 get at a Medicaid subpopulation, how big a  
6 sample do we need overall to pick up enough  
7 Medicaid people? These are nontrivial questions  
8 that I don't think you can just wing.

9 Q. So it's the test that you did in your  
10 1991 survey as applied to the other two surveys  
11 that you are using to reach your conclusion that  
12 these national results can be applied to the  
13 Washington Medicaid population?

14 A. No, what I'm saying is that these  
15 results, if you look at the national results  
16 varying with the demographic characteristics  
17 that you would want to alter to make it  
18 representative of the Medicaid population, such  
19 as educational levels, indicate that, if  
20 anything, the results are strengthened when you  
21 look at lower educated groups.

22 Q. Tell me which variables you would look  
23 at.

24 A. Well, I looked at the education, and  
25 that's one of the tables that we submitted to

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

123

1 you. And if you look at the low educational  
2 group, they overestimate the risks by more than  
3 do the better educated people in the sample.

4 Q. Any other variables that you looked at?

5 A. I looked at age, which I have no reason  
6 to think, I don't think was starkly different in  
7 age.

8 Q. Each of these variables you are  
9 describing you looked at, you took the variables  
10 from the data from the Washington population?

11 A. No. I looked at how in my sample the  
12 results varied, demographic characteristics,  
13 age, gender.

14 Q. So none of these variables you are  
15 telling me about right now, none of the  
16 information, you didn't take any of that from  
17 the Washington population?

18 A. No.

19 Q. Besides education and -- what was the  
20 one you were starting to mention? Age?

21 A. Age, gender, household structure.  
22 These are the main things included.

23 Q. What else?

24 A. We also did controls for region,

25 information the person had received about

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

124

1 smoking, flat feet.

2 Q. Any other variables?

3 A. I don't recall. We did some things  
4 with whether you owned a computer or not, so we  
5 did runs where that came into play. So a lot of  
6 those background questions that are not part --  
7 of the survey not specifically smoking-related,  
8 we also used as part of the analysis.

9 Q. What about obesity?

10 A. I don't think we had an obesity  
11 question.

12 Q. What about alcohol use?

13 A. I don't think we had an alcohol use  
14 question.

15 Q. Was there any information out there on  
16 any variables that you did not use?

17 A. Well, they had a lot of -- they had  
18 things like, "Do you own a personal computer?"  
19 And we used those for instrumental variables  
20 estimates. But not as explicit things to  
21 predict smoking risks perceptions.

22 Q. You gave me five or six variables  
23 here. Are there any other variables besides  
24 that? And I think the answer is no, is that  
25 right? Are those all of them?

1           A.     Age, gender, household size, education,  
2     the various informational variables and various  
3     regional dummy variables. I have done things  
4     with prices in the state, and other variables,  
5     tax structure in the state, other things. So I  
6     have done a lot of analyses.

7           Q.     Now you are broadening it. I thought  
8     there were only five or six and --

9           A.     You can construct any you want, based  
10    on the state. So knowing what state, you can  
11    structure state specific questions.

12          Q.     Did do you that for Washington?

13          A.     I did that for every state.

14          Q.     Did you do that for Washington?

15          A.     Every state, including Washington.

16          Q.     What are the results?

17          A.     They are not in here. I ran smoking  
18    probability equations.

19          Q.     And where are those?

20          A.     I don't have them. I ran them. I ran  
21    them and eventually got the right -- where it  
22    looked good. But this is the risk perception  
23    work.

24          Q.     You are telling me that you controlled  
25    for all the state-specific variables in

1 Washington, but you don't have those results?

2 A. No, I have run other runs on like the  
3 smoking probability, not risk perceptions, where  
4 I controlled for the tax -- cigarette taxes in  
5 the state, the price of cigarettes in the  
6 state. But I don't have those results.

7 Q. You don't have those results?

8 A. No.

9 Q. They are not finished yet?

10 A. I ran the runs, I said, "They look  
11 pretty good," tossed them. And eventually we  
12 will get around to running a set of results that  
13 we'll put into a paper, but it didn't have  
14 anything to do with the litigation. I do  
15 research with the data on my own, apart from  
16 this. I'm not -- that's not funded.

17 Q. Besides that which you said is not  
18 available to us, is there anything else that you  
19 have done using Washington-specific variables on  
20 risk perception of smoking?

21 A. No.

22 Q. And why did you decide to limit it to  
23 only those variables that you used?

24 A. Well, this particular set of variables  
25 I picked because it mirrored the ones that I did

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

127

1 for the 1985 Audits & Surveys data, so I wanted  
2 to show the parallel equations.

3 Q. Who decided which variables to use in  
4 the 1985?  
5 A. I did that, too, based on the set of  
6 variables available in the survey.  
7 Q. When you did those, what was your basis  
8 for stopping at six or however many variables  
9 you gave me before? Why didn't you include  
10 more?  
11 A. Well, I also had a series of regional  
12 dummy variables to characterize different  
13 regions of the country. And I ran some  
14 regressions with maybe 30 variables. I put in a  
15 whole set of informational variables.  
16 Q. What's a dummy variable?  
17 A. It's a variable that takes on a value  
18 of zero which in fact -- it takes on a value of  
19 zero when an effect is not present, or a value  
20 of one when it is. So a dummy variable would  
21 be, union member. If you are a union member,  
22 it's a one; if you are not, it's a zero.  
23 Q. So you have taken studies which survey  
24 populations other than the Washington Medicaid  
25 population at points in time, at single points

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

128

1 in time, '91, '85 and '97, and for this case you  
2 are applying that to form your opinion for the  
3 Washington Medicaid population?  
4 A. Yes.  
5 Q. And you believe it's appropriate to do

6 so?

7 A. I believe the results are quite robust  
8 to the population mix.

9 Q. Is it scientifically valid to do that?

10 A. I think so.

11 Q. Do you think your opinion regarding the  
12 Washington Medicaid population is accurate,  
13 using that methodology?

14 A. This goes back to how I characterize my  
15 opinion. If you are asking, "do people  
16 overestimate the risks of smoking," that opinion  
17 is accurate. If you are asking, "do the  
18 Medicaid recipients have an overall lung-cancer  
19 risk assessment of .43, .44, .45," that refined  
20 distinction I couldn't make, based on what I  
21 have done.

22 Q. So you don't know what the risk  
23 perception of the Washington Medicaid recipients  
24 is as it relates to, say, lung cancer?

25 MR. ATKESON: Asked and answered.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

129

1 A. You don't know exactly, and even if you  
2 surveyed them, you won't know exactly. You only  
3 have a survey. You never know exactly until you  
4 ask everybody.

5 Q. Besides the work that you have done on  
6 risk perception in smoking, what other studies  
7 have you done measuring risk perception? Are

8       there a lot of them out there?

9           A.     That's virtually all -- most of what I  
10       have been doing since 1976 has focused on risk  
11       perception and how it affects behavior, studies  
12       of job safety risk perception, numerous --  
13       consumer safety risk perception, risks of  
14       climate changes, communicating ambiguous risk  
15       information, for EPA, how hazard warnings affect  
16       risk perception of various kinds.

17       Q.     Have you ever done anything on  
18       pollution?

19       A.     Risk of climate changes would be a  
20       pollution type of thing, yes.

21       Q.     What were the results of that study?

22       A.     People, if you provide them risk  
23       information regarding conflicting risk  
24       judgments, people tend to gravitate toward the  
25       high risk assessment, so they tend to exaggerate

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

130

1       the risk.

2       Q.     Do you know what the risks of smoking  
3       are?

4       A.     I don't know the, quote, true risk of  
5       smoking, exactly.

6       Q.     Is it -- what is the true risk of  
7       smoking? What does that mean? You are making a  
8       distinction between true risk --

9       A.     And estimated risk.

10       Q.     -- and false risk?

11           A.     We have the estimated risk by various  
12     people, but I don't know what the true  
13     underlying risk is, and they don't, either.  
14     Otherwise, we would just close up shop on doing  
15     medical research.

16           Q.     You know the estimated risk, are you  
17     saying?

18           A.     I have estimated the risk based on  
19     various reports such as those of the Surgeon  
20     General.

21           Q.     Is it important to know what all of the  
22     risks are, as opposed to, say, just the risk of  
23     lung cancer?

24           A.     No.

25           Q.     Explain to me why not.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

131

1           A.     What you need to do is to have people  
2     deterred from smoking to the efficient degree.  
3     So let's say cigarette smoking did cause, with  
4     some probability, a weird disease that people  
5     didn't know about. Provided all of their other  
6     risk assessments are sufficiently high, then you  
7     will still get adequate deterrence.

8           Q.     Tell me again -- you keep saying, "with  
9     some probability." Tell me again why you have  
10    this hang-up with the definition of causation.

11                   MR. ATKESON: Objection.

12           Mischaracterizes his testimony, and poor use of

13 words.

14 MR. LEITER: And argumentative.

15 MR. GRUENLOH: Any more?

16 MR. LEITER: Asked and answered.

17 MR. ATKESON: I'm sure there are

18 several.

19 A. I was just trying to be precise with my

20 hypothetical example, so, to let you know this

21 was an ailment that would be caused with some

22 probability, not to everybody.

23 Q. Do you know what the position of the

24 tobacco industry is as it relates to causation?

25 Do they admit or deny that cigarettes cause

MAHANEY REPORTING SERVICES

Tel. (617) 542-4207

132

1 disease and death?

2 A. I don't know. I deny those statements

3 because I think they are misleading, and they do

4 not reflect the probabilistic character of the

5 risks.

6 Q. Do you know what the tobacco industry's

7 position is?

8 MR. ATKESON: Asked and answered.

9 Q. Do you know?

10 A. I don't know, but I would be surprised

11 if they disagreed with me.

12 Q. Let me ask you about a few diseases

13 here, and let me know if you think that there

14 are risks that may be associated with smoking or

15 may be caused by smoking. Do you think leukemia

16       may be caused by smoking?

17           A.     I don't know.

18           Q.     Do you think that emphysema may be

19       caused by smoking?

20           A.     If we are going to through all of this

21       where causality is not going to be in

22       probabilistic terms, where some people could

23       interpret this as for sure, my answer is going

24       to be no, all the way down the list.

25           Q.     What in terms of probability to you

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

133

1       would mean causation?

2           A.     1.0.

3           Q.     It has to be 1.0 absolute?

4           A.     Otherwise, "it increases the

5       probability" would be a more accurate phrasing

6       of the relationship.

7           Q.     So if cigarettes caused 99 people out

8       of a hundred to get lung cancer, would you say

9       that they cause or do not cause lung cancer?

10          A.     I would say they give you a 99 chance

11       out of a hundred of getting lung cancer.

12          Q.     But would you say that they cause lung

13       cancer?

14          A.     I would say they cause you to have an

15       increased probability of lung cancer.

16          Q.     But not just cause?

17          A.     Right. I don't use terminology for

18       certainty to deal with probabilistic events.

19 Q. For each of these, why don't you just  
20 tell me if cigarette smoking elevates  
21 significantly the probability of a person's risk  
22 of getting death and disease. Can you tell me  
23 that?

24 A. I'm not sure what you mean by a  
25 significance. Whether it means big, whether it

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

134

1 means statistically significant, or whether  
2 somebody has found a link.

3 Q. Let's get rid of "significantly," and  
4 tell me if it elevates the risk.

5 MR. ATKESON: His personal opinion?

6 MR. GRUENLOH: His opinion.

7 MR. ATKESON: His personal opinion?

8 MR. GRUENLOH: As an expert in this  
9 case.

10 MR. ATKESON: He's not being offered  
11 on those issues as an expert.

12 MR. GRUENLOH: He's an expert on risk  
13 perception. I want to know what he thinks the  
14 risks are.

15 MR. ATKESON: Ask him. This is not  
16 -- ask him.

17 Q. What about heart disease?

18 MR. ATKESON: If you have a personal  
19 opinion on that, you can tell him.

20 A. Yes.

21 Q. Yes, you think that smoking raises the  
22 probability of a person getting increased  
23 morbidity or mortality?

24 A. Yes.

25 MR. ATKESON: You are the one asking

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

135

1 the question. Don't look so stunned that he  
2 answered it.

3 Q. What about birth defects?

4 A. Yes.

5 Q. What about mental illness?

6 MR. ATKESON: Same thing.

7 A. No. But I have discussed mental  
8 illness, and if you call psychological effects  
9 of smoking mental illness, yes. But the way I  
10 think of mental illness, no.

11 Q. What about additional healing time?

12 A. Possibly.

13 MR. ATKESON: To what?

14 A. Healing of what?

15 Q. Thanks.

16 MR. ATKESON: Is this related to  
17 mental illness?

18 Q. Low birth weight?

19 A. Yes.

20 Q. Gum disease?

21 A. I don't know. But chewing tobacco,  
22 yes.

23 Q. Asthma?

24           A.     I don't know. It may increase your  
25     symptoms. I don't know whether it gives you

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

136

1     asthma if you have never had it.

2           Q.     What are the important components that  
3     you have to measure, that you have to look at,  
4     when you are measuring risk perception?

5           A.     Well, I like to define what is the  
6     health outcome that we are talking about and  
7     what the probability being assessed for the  
8     health outcome, would be one way to think of  
9     it.

10          Q.     What about the scope of the risk?

11                   MR. ATKESON: Asked and answered.

12          A.     What you are saying, is that  
13     distinctive from what I have already talked  
14     about? Scope of the risk in what way?

15          Q.     All of the ways a particular risk may  
16     affect a person.

17                   MR. ATKESON: Asked and answered.

18          A.     I have discussed that, where you don't  
19     need to go through every risk and every  
20     attribute, provided that I elicit enough risk  
21     perceptions from a very serious attribute that  
22     alone is sufficient to cause adequate incentive  
23     to avoid the behavior.

24          Q.     If there's a 99 percent probability  
25     that a smoker will get lung cancer, how should

1       those risks be relayed, in your opinion, to  
2       accurately inform the smoker of his or her risks  
3       of getting lung cancer?

4           A.     Well, one thing you could do is tell  
5       smokers that cigarette smoking increases your  
6       probability of lung cancer by 99 chances out of  
7       a hundred.

8           Q.     But you shouldn't tell them that it  
9       causes lung cancer? Is that your opinion?

10          A.     I prefer the probabilistic thing  
11       because people say "cause" now, and the  
12       probability is .06, you know, or whatever the  
13       number is, which is roughly a factor of ten  
14       smaller than .99.

15          Q.     Is there any other way besides saying  
16       what you just said, 99 out of a hundred? Is  
17       there any other way that the industry could  
18       adequately inform consumers of the risk of  
19       smoking?

20                 MR. ATKESON: You have changed the  
21       question completely. You asked him, how would  
22       he respond to your question. Now you're asking  
23       how the industry should respond. Are you  
24       intending a difference?

25          Q.     How should the industry respond?

1 MR. ATKESON: To?

2 Q. Do you know the question?

3 A. I had the same problem that Mr. Atkeson  
4 did, which is that you asked me to design a  
5 warning before. You asked me why you shouldn't  
6 tell them it causes lung cancer. Then you  
7 shifted to the industry and what the obligations  
8 of the industry are, which involves a legal  
9 judgment.

10 Q. You said one way to do it would be to  
11 say that smoking causes 99 people out of a  
12 hundred to get lung cancer; correct? That would  
13 be one way to inform the consumer?

14 A. That may not be the exact wording I  
15 would use if I actually spent time thinking of  
16 the wording, as opposed to winging it. So I  
17 might say something like, "99 out of a hundred  
18 smokers will get lung cancer because they  
19 smoke." I might tinker with the wording, but  
20 that's generally how I would approach that.

21 Q. Has the industry done that?

22 A. No, because 99 out of a hundred don't  
23 get lung cancer.

24 Q. How many out of a hundred do get lung  
25 cancer? Do you know?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 A. We don't know. That's the problem, we

2 don't know exactly. We have an estimated risk.

3 Q. What does the Surgeon General's Report  
4 say about it?

5 A. He doesn't. I had to compute the  
6 probabilities based on his absolute numbers.

7 Q. Is there any other way that you could  
8 do it? If 99 people out of a hundred got lung  
9 cancer as a result of their smoking, is there  
10 any other way that you could do it?

11 MR. LEITER: Do what?

12 Q. Inform the consumers of the risk?

13 MR. LEITER: You, meaning Doctor  
14 Viscusi?

15 A. I came up with two wordings. I may be  
16 able to come up with more. I mean, I have just  
17 been thinking about this for five minutes, with  
18 your hypothetical risk.

19 Q. Is it possible that people are unaware  
20 of the illnesses other than lung cancer, other  
21 than those that you asked about or that Audits &  
22 Surveys asked about in the surveys?

23 A. It's possible there are some illnesses  
24 whose probability is increased by smoking that  
25 they don't know about.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

140

1 Q. Did you ever do any research to  
2 determine the risk perception of, say, low  
3 birth-weight babies as it relates to smoking?

4 A. No.

5 MR. ATKESON: The question was  
6 whether he has asked babies about their risk  
7 perception?

8 MR. GRUENLOH: That's not my  
9 question.

10 MR. ATKESON: Then you need to word  
11 it better if you want a good answer.

12 Q. Have you ever done any research on  
13 people's risk perception as it relates to  
14 emphysema and smoking?

15 A. To the extent that emphysema affects  
16 your total mortality risk or your life  
17 expectancy, then that would be picked up by  
18 those.

19 Q. Same question, but on the increased  
20 healing time that smokers may incur. Have you  
21 ever done any research on that to find out if  
22 people know about that or not?

23 A. I have no question I have asked on  
24 that.

25 Q. So you don't know whether people

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

141

1 overperceive the risk of that or underperceive  
2 the risk? You just don't know?

3 A. That's correct.

4 MR. GRUENLOH: Do you want to take  
5 lunch?

6 MR. ATKESON: That's fine.

7

8

(Luncheon recess taken.)

9

10 Q. Doctor Viscusi, did you analyze all the  
11 information that the public had on the risks of  
12 smoking back in the 50's?

13 A. I don't know everything the public had.

14 Q. Did you analyze any of it?

15 A. I analyzed the Reader's Digest  
16 articles. I tracked the Gallup Poll results  
17 through the 50's. I have looked at Roper Poll  
18 results, and any other evidence discussed in my  
19 book. But this wouldn't include everything the  
20 public had access to. There's also cigarette  
21 advertising. I alluded to that in the book as  
22 well.

23 Q. So is it your opinion that, based upon  
24 those things that you looked at, that you are  
25 fully aware of what the people perceived the

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

142

1 risks to be and what the risks were?

2 A. Well, I am not fully aware of what the  
3 risks are now.

4 Q. What about the people's perception?  
5 Strike that. What about the information that  
6 was available to the people?

7 MR. ATKESON: You are talking about  
8 in the 50's?

9 Q. In the 1950's.

10           A.     There was less than there is now.

11           Q.     What about the 60's? Did you analyze

12           all that information that was available to the

13           public?

14           A.     I don't know everything that was

15           available to the public.

16           Q.     What about the 70's?

17           A.     Same. I don't even know everything

18           that's available to the public now.

19           Q.     How can you give an opinion on risk

20           perception if you are not aware of the

21           information that was available to the public?

22           A.     I don't think anybody ever knows

23           everything. That was what your question was.

24           There are very few subjects I claim to know

25           everything about, or to have every piece of

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

143

1           information that's ever been released regarding

2           cigarette risks. I don't know that anybody in

3           the world knows everything about cigarette

4           risks.

5           Q.     Well, how much is enough? Did you

6           analyze most of the information that was

7           available?

8           A.     Well, how are you quantifying the

9           information?

10          Q.     I want to know what you analyzed.

11          A.     That's a different question. I have

12 read the Surgeon General's Reports for a number  
13 of years. I have read a variety of the articles  
14 in the literature.

15 Q. I thought you said the public doesn't  
16 look at the Surgeon General's Report for the  
17 perception --

18 A. You asked what I read, not what the  
19 general public reads. That was the question  
20 before, what I read.

21 Q. The information that was available to  
22 the public, I think was the question.

23 A. No, you asked me --

24 Q. That's what I am asking you for now.

25 A. That's different than what you had

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

144

1 asked before.

2 Q. I'm changing it, then. So --

3 A. So what's the question?

4 Q. The question is, let's go to the 80's.  
5 Did you review all of the information in the  
6 80's or a substantial portion of the information  
7 in the 80's regarding the risks of smoking that  
8 was available to the public?

9 A. Once again you would have to define  
10 what "substantial portion" is.

11 Q. Well, let's say out of the universe of  
12 it, do you think you reviewed 50 percent of it?

13 A. I don't know how to quantify it. You  
14 tell me how to quantify it, then I'll tell you

15 the percentage.

16 Q. Tell me what you reviewed.

17 A. The same thing I reviewed for the other

18 period. I read the Surgeon General's Reports.

19 I also reviewed the public opinion polls,

20 Reader's Digest articles, articles published in

21 the literature about smoking risks.

22 Q. How many articles?

23 A. I don't know. In the course of this

24 work I have read hundreds of articles, in the

25 course of my smoking research.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

145

1 Q. And you did that with articles

2 published in the 50's, yes or no?

3 A. I don't know what time period the

4 article pertained to. I have read articles

5 published in Reader's Digest from the 50's.

6 Q. What about the 60's?

7 A. Same thing.

8 Q. 70's?

9 A. Yes.

10 Q. 80's?

11 A. Yes.

12 Q. How does your opinion that people

13 overperceive the risks of smoking relate to this

14 case?

15 MR. ATKESON: You are asking for a

16 legal conclusion?

17 MR. GRUENLOH: I'm asking his  
18 understanding.  
19 A. It relates to whether people are aware  
20 of the risks, and that's my only role, is to  
21 provide the information regarding awareness of  
22 the risk, at least on that topic. I'm not sure  
23 exactly how it's going to come up.  
24 Q. Did the state of Washington  
25 overperceive the risk of smoking?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

146

1 MR. LEITER: Meaning the government?  
2 A. The institutions don't have risk  
3 perceptions as far as I know.  
4 Q. Going back to the three surveys, the  
5 question was not asked of the individual  
6 respondent, "What is your chance of getting lung  
7 cancer from smoking," was it?  
8 A. That wasn't the wording of the  
9 question. The question wording you have.  
10 Q. Why not?  
11 A. The question phrasing that we have is  
12 the natural way for people to think about it.  
13 It also parallels the way I've presented and  
14 asked risk perception questions in research done  
15 for the EPA. It's also an approach I have  
16 validated in those studies as giving a  
17 reasonable reflection of people's risk beliefs.  
18 Q. Are people going to be more informed  
19 and have more information about their own risks

20 as opposed to other people's risks?

21 A. What risk are we talking about?

22 Q. The risk of getting lung cancer because

23 of smoking.

24 A. They know whether they smoke or not,

25 and if you do smoke, your risk is higher.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

147

1 Q. Do they know whether they exercise or

2 not?

3 A. Yes.

4 Q. Do they know whether they're overweight

5 or not?

6 A. Yes.

7 Q. Do you think that those factors can

8 play a part in their determination of whether

9 that's a risk to them or not?

10 A. I don't know if there's a significant

11 effect.

12 Q. You have never looked to find out?

13 A. No.

14 Q. You could have asked them what they

15 believe their own risk to be, couldn't you have?

16 A. How would you do that?

17 Q. Well, you tell me.

18 A. I didn't ask it.

19 Q. Could you have done it?

20 A. Could I have done what?

21 Q. Could you have asked them individually

22        what their risk of getting lung cancer as a  
23        result of their smoking was?  "Are you a  
24        smoker?  If yes, what do you believe your chance  
25        of getting lung cancer is?"

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

148

1            A.     How would you phrase that?  Would you  
2        say -- my answer to that, let's say  
3        hypothetically that the respondent says, "I  
4        think my chance is high."

5            Q.     All right.  Could you have said, "What  
6        percentage chance do you think you have of  
7        getting lung cancer?"

8            A.     Like how many out of a hundred.  It's  
9        more concrete.  That's a percentage.  I have  
10       always used concrete denominators.  And I think  
11       my question essentially accomplishes the same  
12       thing.

13          Q.     As asking the individual what  
14       percentage chance they have of getting a disease  
15       as a result of smoking?

16          A.     For one thing, you can't ask that  
17       question of the nonsmoking population because  
18       they don't smoke.  So one thing I wanted to do  
19       was to get that answer, because that throws out  
20       three-quarters of the sample.

21          Q.     So you are saying you couldn't have  
22       asked individuals about their own risk?

23          A.     You can ask that question.

24          Q.     And tell me again why you didn't.

25           A.     Because first of all, my question is a

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

149

1       fine question.  It gives an accurate reflection  
2       of people's risk beliefs.  It reflects an  
3       approach that's been corroborated in other risk  
4       studies as being a valid approach.  I have no  
5       reason to want to change it.

6           Q.     What studies have corroborated it?

7           A.     I have done a series of studies for EPA  
8       where we present risk information based on  
9       reference populations.  Some of them are in  
10      these books.

11          Q.     But those are studies that you have  
12      done?

13          A.     Yes.

14          Q.     So your studies corroborate your study?

15          A.     My published studies on other topics  
16      corroborate the fact that asking people risk  
17      questions regarding reference populations is an  
18      acceptable way to do it in terms of giving you  
19      valid results.

20          Q.     Is there anything out there in the  
21      literature not authored by you that corroborates  
22      doing it this way?

23          A.     Some of these, I had co-authors.  There  
24      aren't that many people that do risk -- I can't  
25      think of that many people that do risk studies

1 with objective risk questions. So that the fact  
2 that I have done almost all the studies in the  
3 literature shouldn't be held against me.

4 Q. So is the answer no?

5 A. I can't think of people who have done  
6 it differently or the same. I can't think of  
7 anybody else that had studied -- the other study  
8 that was the same as my job risk study --

9 Q. Before we get off --

10 MR. ATKESON: Let him finish.

11 A. The other study the same as my job risk  
12 study, also using a risk scale -- which I  
13 believe was an industry risk, not risk to you --  
14 was done by a series of researchers for EPA, and  
15 they got a similar result to my job risk study.  
16 I used a nonfatal risk; they used a fatality  
17 risk. That's one other example.

18 Q. Did you take part in that study?

19 A. No.

20 Q. Anything else out there that  
21 corroborates?

22 A. Well, I have done a handful of my  
23 studies. I have this other study there. These  
24 are the only ones I can think of right now.

25 Q. Are you the only scientist that studies

1 risk perception on smoking?

2 A. The only economist. The other person  
3 who does risk perception in smoking is not an  
4 economist, the one I know of, Paul Slovic.

5 Q. Do you plan on surveying the Washington  
6 Medicaid population prior to the trial?

7 A. I have no plans to do that.

8 Q. Why not?

9 A. Nobody has asked for me to do it, and I  
10 don't want to. I don't pay for surveys myself.

11 Q. Wouldn't it make your results more  
12 reliable?

13 A. No, I am testifying based on the broad  
14 trends, not, as I indicated, whether the risk  
15 perception of lung cancer is .43 or .44. And  
16 regarding the overperception issue, we know this  
17 can be projected out to Washington reliably.

18 Q. Let me ask you this. Would it make  
19 your results more applicable to the state of  
20 Washington Medicaid population if you did that?

21 A. Well, it's already applicable. That  
22 general conclusion that I'm going to be offering  
23 is applicable. So I could make more refined  
24 judgments if I had more data.

25 Q. So is the answer to my question yes, it

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

152

1 would be more applicable if you did that?

2 MR. ATKESON: His answer is what he

3 just told you.

4 A. I would be able to answer other  
5 questions other than what I am answering, but  
6 the questions I'm going to be answering are of  
7 sufficient breadth that I don't need more  
8 refined data to answer that question.

9 Q. Let me ask you this. If the cigarette  
10 industry turned over all of their information  
11 back in the 60's, everything they had, and as a  
12 result, hypothetically speaking, as a result  
13 they came under FDA jurisdiction and they took  
14 off of the market all of the cigarettes that  
15 were currently on the market, and in lieu of  
16 those cigarettes that were out there, they  
17 produced, the tobacco industry produced, a safer  
18 cigarette, a cigarette with less carcinogens,  
19 less nicotine, less tar, whatever, to the  
20 complete exclusion of those other more dangerous  
21 cigarettes, now if that would have happened back  
22 in the 1960's, tell me how your opinion that  
23 people overperceive the risks of smoking would  
24 have had any effect on that. Or would it?

25 A. What? We've just abolished all

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

153

1 cigarettes? Replaced them with --

2 Q. We haven't --

3 A. Replaced them with the Premier?

4 Q. Just a safer cigarette.

5 A. Let's pretend it's the Premier. How

6       would -- people would have to have a new risk  
7       perception for this cigarette, presumably, so  
8       you would want to communicate the risks of this  
9       new cigarette.

10       Q.     If that had happened back in the 60's,  
11       do you think there would have been more disease  
12       or less disease among smokers?

13       A.     Less.  If you replace all cigarettes  
14       with the Premier, I think there would be less  
15       disease.

16       Q.     Do you know what the Gentleman's  
17       Agreement was?  Have you ever heard that term  
18       before?

19       A.     I have heard it, but remind me what the  
20       agreement is.

21       Q.     It was an agreement between the Big  
22       Five not to do any research or market a safer  
23       cigarette.  You have seen that before?

24       A.     No.

25       Q.     Is it still your opinion that if the

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

154

1       tobacco industry were to disclose all of the  
2       information that they have currently on the  
3       risks of cigarettes, that the public perception  
4       of the risks would actually be lower?

5       A.     You are saying, is it still my opinion,  
6       so you are referring to something else.  Do you  
7       want to tell me what my other statement was?

8 Q. Is that your opinion now?

9 A. My opinion is if you tell people the  
10 truth about the risks of tobacco, their risk  
11 perception will go down because people  
12 overestimate the risk.

13 Q. I thought a basic tenet of economics  
14 was "the more information the better." That  
15 doesn't apply here?

16 A. We are talking about probabilistic  
17 information, telling them that the probability  
18 of death from cigarettes is X, Y and Z. That's  
19 different from the character of the information  
20 that is provided. Typically the information  
21 that's provided is not what I would call  
22 information but forms of persuasion to try and  
23 get people to stop smoking or to highlight the  
24 risks.

25 So the intent of the information

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

155

1 transfer is not to lead people to have accurate  
2 risk beliefs but rather simply to raise their  
3 risk beliefs, and I don't view that as an  
4 appropriate role for the government.

5 Q. What about people out there that  
6 underperceive the risks of smoking? How would  
7 it affect them if the tobacco industry disclosed  
8 everything they know?

9 A. I'm not sure whether -- it depends on  
10 how it's played, but if you get people to have

11 more accurate risks beliefs, people that  
12 overperceive it will lower their risks beliefs;  
13 people who underperceive it will raise their  
14 risk beliefs. How release of information would  
15 affect risk perceptions is not clear to me  
16 because I don't know what the information is  
17 that you are referring to, how it would be  
18 released or what it's going to tell people they  
19 don't already know.

20 Q. That leads to my next question. Have  
21 you done a review of the internal documents that  
22 the tobacco industry has regarding risks of  
23 smoking?

24 A. No. The -- the only review I have done  
25 is review the documents handed to me in

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

156

1 depositions by attorneys against the tobacco  
2 industry.

3 Q. And yet you're confident that if that  
4 information which you are not aware of were  
5 released to the public, it would still cause the  
6 perception to go down?

7 MR. LEITER: Objection.  
8 Argumentative.

9 A. What I'm saying is that if this  
10 information is going to lead people toward more  
11 accurate risk judgments, which I assume the  
12 Surgeon General has a good idea of what that

13 would be, if we use that as the reference point,  
14 then that would cause risk perceptions to go  
15 down.

16 Q. Well, you consider yourself a  
17 scientist; right?

18 A. Economist. We are social scientists;  
19 we are not lab scientists.

20 Q. Shouldn't you have all of the facts at  
21 hand before you make a conclusion?

22 MR. LEITER: Objection.  
23 Argumentative.

24 A. You can never have all the facts about  
25 virtually anything. You always act under

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

157

1 situations of partial information. That's  
2 called Bayesian decision-making, which is a lot  
3 of what I do.

4 Q. Well, you are saying people's  
5 perception of risks would actually go down if  
6 the industry disclosed everything they knew, and  
7 you are saying that without knowing what the  
8 tobacco industry knows; is that correct?

9 A. If you read back my answer to the  
10 question, you will find that if the release of  
11 the information is going to lead the public to  
12 have beliefs that parallel those in the Surgeon  
13 General's Reports, I have no reason to believe  
14 that it would provide different information than  
15 that would lower risk beliefs.

16 Q. What if it did?  
17 A. Did what?  
18 Q. Provide much different information?  
19 What if, according to your definition of  
20 causation before, what if the information that  
21 the industry provided showed a 1.0 relationship  
22 between smoking and disease?  
23 A. Then this would have showed in all the  
24 studies done by the Surgeon General that track  
25 real populations. So if a tobacco industry does

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

158

1 a study with a bunch of mice in a laboratory,  
2 that's interesting. But the studies that  
3 actually track people I view as more informative  
4 with regard to the risks in humans, and that's  
5 the kind of information the Surgeon General has  
6 been using in their studies. I know of no  
7 studies done by the tobacco industry that are  
8 comparable.  
9 Q. And you are assuming, I take it, in  
10 that answer, that the tobacco industry or the  
11 Surgeon General committee that did that report  
12 had at its fingertips all of the same  
13 information that the tobacco industry had; is  
14 that correct?  
15 A. No, what I'm saying is that studies  
16 that track people, large-scale population  
17 studies of risks to people, are more informative

18       than beagle or mice studies or rat studies, if  
19       you are trying to assess the risks to people.  
20       Q.     Let's just limit it for a second to the  
21       dangerous elements that may be present in  
22       cigarettes. Who is in a better position to know  
23       what those may be: the Surgeon General or the  
24       tobacco industry?  
25       A.     Well, cigarettes are available on the

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

159

1       market. Anybody can take these out and test  
2       them. But what we really care about is what the  
3       risk consequences of these dangerous elements  
4       are, and that you can track through population  
5       studies. And the cigarette industry is not best  
6       equipped to do that; the federal government is.  
7       Q.     The cigarette industry is not the best  
8       equipped to determine what is in their  
9       cigarettes?  
10       MR. ATKESON: Asked and answered.  
11       A.     I could repeat my answer. What you  
12       care about is, first of all, the consequences of  
13       the cigarettes, and that can best be assessed by  
14       tracking a population. Second, to figure out  
15       the chemical constituents, anybody can take a  
16       cigarette and run tests to figure out what it  
17       is.  
18       Q.     If the industry came out and said that  
19       smoking was addictive, and everybody understood  
20       what that meant, addiction was defined, would

21       that increase or would that lower the risk  
22       perception of people regarding smoking?  
23       A.     It's a different assumption than risk  
24       perception pertaining to mortality.  You are  
25       talking about addiction.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

160

1       Q.     Let me just --  
2       A.     I was in the middle of my answer.  
3       Q.     It's a different question, so let me  
4       clarify the question.  If they came out and said  
5       smoking is addictive and they defined addiction,  
6       how would that relate to your estimates of the  
7       risk perception of smoking?  
8       A.     It won't affect it, because you are  
9       asking, what are the risks associated with  
10       smoking.  And we already have a public that  
11       already universally believes that smoking is  
12       hard to quit.  Whether you call it habit-forming  
13       or addiction, everybody, virtually everybody,  
14       believes those things.  
15       Q.     And hard to quit in your mind is the  
16       same thing as addiction or addictive?  
17       A.     From an economic standpoint it is  
18       exactly the same.  Now, that's different from  
19       how it's defined medically.  But from an  
20       economist's standpoint, "addictive" and  
21       "transactions cost of change" are the same  
22       thing.

23 Q. I'm handing you what's been marked as  
24 Exhibit 1403 in the deposition. Can you  
25 identify this?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

161

1 A. This is a Xerox copy of my "Smoking"  
2 book.

3 MR. ATKESON: I think's that's  
4 1403. It should be 1404. Because this is  
5 1404.

6 MR. GRUENLOH: 1404.

7 MR. ATKESON: Just so we are clear.

8 Q. Can you turn to page 7 of that for me  
9 and read the second paragraph there?

10 MR. ATKESON: Aloud?

11 MR. GRUENLOH: Yes.

12 A. "The main finding with respect to risk  
13 perceptions for lung cancer is that not only is  
14 there substantial awareness of the smoking  
15 hazards, but overall individuals appear to  
16 overestimate the risks as compared with the  
17 levels in the scientific evidence. Whereas the  
18 best scientific estimates of the lifetime lung  
19 cancer risks from smoking range from .05 to .10,  
20 individual perceptions of the risk are much  
21 greater.

22 "The entire population assesses this  
23 risk at .43, and even current smokers have a  
24 substantial risk perception of .37. The  
25 fraction of the population underassessing the

1 risk is less than 10 percent, and the extent of  
2 their risk underestimation is comparatively  
3 small in magnitude."

4 Q. Thank you. Where did you get the  
5 numbers .05 and .10 from?

6 A. I provided information on how I did the  
7 calculations in one of the footnotes in the  
8 book.

9 Q. Can you describe that for me?

10 A. I will find the footnote.

11 Q. By the way, that translates out to a  
12 five percent -- between a five percent and ten  
13 percent chance of getting lung cancer; correct?

14 A. That's correct. Footnote 19 on page  
15 84.

16 Q. Hold on a second. Let me catch up with  
17 you.

18 MR. ATKESON: What do you want him  
19 to do?

20 MR. GRUENLOH: Let me just read it.

21 A. (continuing) And footnote 20.

22 Q. Can you nutshell that for me?

23 A. There are these government estimates of  
24 the number of people who get lung cancer divided  
25 by the smoking population, to get the

1 probabilities.

2 Q. Did you use the Surgeon General's  
3 Report to get any of those probabilities?

4 A. The Department of Health and Human  
5 Services is the Surgeon General's Report.

6 Q. So the answer is yes?

7 A. Yes.

8 Q. Why just lung cancer? Why did you ask  
9 just about lung cancer?

10 A. I didn't. This is the Audits & Surveys  
11 data.

12 Q. Do you know why they did?

13 A. The case that was being litigated was a  
14 lung cancer case, but other than that, they  
15 didn't tell me. But that's what I surmised.  
16 And they indicated that the survey was run in  
17 connection with that type of litigation, lung  
18 cancer cases.

19 Q. Can you turn to page 70 of your book  
20 for me, please. There's a table at the top  
21 there. Can you explain the numbers that are  
22 reported in this table for me?

23 A. Well, in survey year 1985, looking at  
24 the evidence in the literature such as the  
25 Surgeon General's Report, I calculate the lung

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 cancer mortality risk to the smoker as ranging

2 from five percent to ten percent. And using  
3 more recent studies in 1991, the range is six  
4 percent to 13 percent. And similarly I  
5 calculate the mortality risks to the smoker --  
6 Q. Is that 16 percent? Sorry.  
7 A. Six percent to 13 percent.  
8 Q. Okay.  
9 A. Then the other columns present other  
10 data for other risks.  
11 Q. What other risks?  
12 A. The total mortality risk to the smoker,  
13 the total mortality risk to society.  
14 Q. Can you go through those like you did  
15 the last two?  
16 A. Total mortality risk to the smoker,  
17 that estimated range is .16 to .32 in 1985. And  
18 .18 to .36 in 1991. The total mortality risk  
19 to society ranges from .21 to .42 in 1985, to  
20 .23 to .46 in 1991.  
21 Q. And these numbers are all from the  
22 Surgeon General's Report?  
23 A. No, I just -- I indicated none of these  
24 numbers were from the Surgeon General's Report.  
25 Q. But you based them -- they were from

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

165

1 data originally from the Surgeon General's  
2 Report?  
3 A. Not all of them, some of them. There

4        were more recent studies after the Surgeon  
5        General's Report that I used, also government  
6        studies, government-funded studies, to try and  
7        stay up to date. As you notice, my updated  
8        estimates are higher. So I wanted to make the  
9        estimates as current as possible.

10       Q.     Why didn't you use the higher numbers,  
11       the 46 percent there? Why didn't you use that  
12       in your study, as opposed to the five to ten  
13       percent?

14       A.     Well, because it's a different risk.  
15       The risk that the question is about is about  
16       lung cancer, and that risk includes total  
17       mortality from all causes, not just to the  
18       smoker but to everyone else. And you're  
19       referring to the upper-bound estimate, where  
20       there is a risk range of .23 to .46 even for  
21       that risk.

22       Q.     The question could have been asked in  
23       those surveys about total mortality as opposed  
24       to just lung cancer, couldn't it have?

25       A.     I did that in 1991 and 1997.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

166

1       Q.     And what was your result there? What  
2       was the risk perception of the smoker?

3       A.     For the smoking subsample, I will have  
4       to dig it out of the text. It may be in here.

5                    1991, for the smoking subsample,  
6       .47.

7 Q. .47?  
8 A. .47. And in 1997, for the smoking  
9 subsample, .42.  
10 Q. That's for all diseases?  
11 A. Mortality risk from all diseases.  
12 Q. Did you list the diseases in your  
13 question?  
14 A. I listed the following: "Out of one  
15 hundred cigarette smokers, how many of them do  
16 you think will die from lung cancer, heart  
17 disease, throat cancer or any other illness  
18 because they smoke cigarettes?"  
19 Q. What is the question immediately  
20 preceding that one?  
21 A. I would have to look at the survey.  
22 Q. Let me ask you if -- I believe it was  
23 the question on lung cancer. Tell me if I'm  
24 wrong or right.  
25 A. Yes, it was the lung cancer question.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

167

1 Q. Who decided upon the order of those  
2 questions? Do you know?  
3 A. This is the way I asked them, building  
4 it up in pieces, in North Carolina. So this is  
5 just mimicking my approach.  
6 Q. Let me ask you, why didn't you just  
7 ask, instead of both of those questions, the  
8 lung cancer question and the total mortality

9 question, why didn't you just ask, out of a  
10 hundred people, how many will die as a result of  
11 their smoking, or become ill?

12 A. I wanted to make it more concrete, to  
13 actually go over some of the kinds of ways  
14 people could die, to sort of bring up in their  
15 minds the actuality of different diseases, so  
16 that they could think mentally of some of the  
17 different causes of death.

18 Q. You wanted to bring up in their mind  
19 lung cancer --

20 A. -- heart disease, throat cancer, other  
21 illnesses, to let them know there were a  
22 multiplicity of ways you could die.

23 Q. Would you consider those the more  
24 well-known risks that are associated with  
25 smoking?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

168

1 A. These -- lung cancer and heart disease  
2 have been the focus not only of being well known  
3 but also believed to be quite big by the people  
4 who assess smoking risks. So they are the  
5 focus, for example, of the OSHA and EPA analyses  
6 of environmental tobacco smoke. These are the  
7 key things.

8 Q. Okay. Do you think that the Washington  
9 Medicaid population is the same as the  
10 population which was surveyed in the 1985  
11 survey?

12           A.     Well, it's twelve years, 13 years,  
13     since then.  So times have changed.  But the  
14     general conclusions seem robust according to  
15     time.  The conclusions if anything are stronger  
16     for the less educated groups.

17           Q.     How might they be different?

18           A.     Well, they have higher risk  
19     perceptions.

20           Q.     Let's go back to your book for a  
21     second, page 7, again.  You list two numbers, 43  
22     percent and 37 percent.

23           A.     I don't see those.

24           Q.     In that second paragraph.

25           A.     Page 70?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

169

1                   MR. ATKESON:  Page 7.

2           Q.     Page 7, I'm sorry.

3           A.     All right.

4           Q.     How did you get those numbers?

5           A.     These are the mean lung cancer risk  
6     perceptions for the full sample and for the  
7     current smoker subsample of the population.

8           Q.     So the mean of the people that were  
9     surveyed, their mean response was that 37 out of  
10    a hundred people will get lung cancer or 43 --  
11    or 43 out of a hundred will get lung cancer?

12          A.     That's correct.

13          Q.     How many people were surveyed, do you

14 know, originally, in the first? Let's deal with  
15 the '85 survey.

16 A. I will have to look it up.

17 Just over 3,000, so over 3100.

18 Q. Do you know if there was a bigger base  
19 that they started from?

20 A. People that they called and didn't  
21 answer?

22 Q. Right.

23 A. I'm sure they -- well, I would -- I'm  
24 not sure how high their response rate was, but I  
25 would -- most telephone surveys, you don't get a

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

170

1 hundred percent answering on the phone.

2 Q. Is it possible that they captured the  
3 views only of those people who had particularly  
4 poignant views on the subject?

5 A. I have no reason to believe that that's  
6 the case, because people didn't know why they  
7 were answering the phone.

8 Q. Getting back to the higher risk that's  
9 on that same page in that table 4, look at the  
10 one -- I think it's --

11 MR. ATKESON: Page 70?

12 MR. GRUENLOH: Yes.

13 A. Okay.

14 Q. Let me make sure. In the bottom  
15 right-hand corner of that table, 23 to 46  
16 percent, can you tell me again what that

17 represents?

18 A. The assessed total mortality risk to  
19 society, including risks to the smoker, risk to  
20 others, fires, fetal deaths, is .23 to .46.

21 Q. If the question in the survey had been  
22 turned in that way, and by "that way," I mean  
23 with, "What do you think the risks are of what  
24 you just read," do you think the answer would  
25 have changed?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

171

1 A. I think you would get a bigger answer.

2 Q. How much bigger do you think the answer  
3 would be?

4 A. I don't know.

5 Q. Did you ever do any sensitivity  
6 analysis or anything to find out about that?

7 A. Never tried.

8 Q. Why not?

9 A. I'm interested in private decisions as  
10 they affect the individual, so the focus here  
11 was on individual risk-taking as opposed to, for  
12 example, environmental tobacco smoke, for which,  
13 at least at this time, the risk estimates were  
14 much flimsier than they are today.

15 Q. What's a personalized risk assessment?

16 A. It would be a risk assessment to the  
17 person as opposed to a societal risk assessment.

18 Q. You mean as opposed to a generalized

19 risk assessment?

20 A. I don't know what you mean by a  
21 generalized risk assessment.

22 Q. What was the one you just said?

23 A. I was interested in risk assessment of  
24 risks to the individual. So I cared about their  
25 risks to themselves as opposed to risks to

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

172

1 others.

2 Q. And yet you didn't ask about their  
3 risks specifically?

4 MR. ATKESON: Asked and answered.

5 A. I asked about risks to smokers. I  
6 didn't ask about risks to nonsmokers caused by  
7 environmental tobacco smoke.

8 Q. So you haven't asked one person in the  
9 Washington Medicaid population about their own  
10 risk perception?

11 MR. ATKESON: Asked and answered.

12 A. I think my questions do ask about  
13 people's own risk perceptions. Whether there is  
14 somebody from the Washington Medicaid population  
15 in my sample, I don't know.

16 Q. You are not familiar with the term,  
17 "generalized risk assessment"?

18 A. No. Generalized about what?

19 Q. Let me define it for you, as I  
20 understand it. As I understand it, generalized  
21 risk assessment is a person's risk as it relates

22 to society in general, not specifically to  
23 them. Have you heard of that before?  
24 A. I have heard of that concept. I have  
25 heard of people testing that.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

173

1 Q. What have you heard it called, as  
2 opposed to generalized risk assessment?  
3 A. I haven't heard that many labels. I  
4 have heard of people looking at personal risks  
5 or societal risk assessment.  
6 Q. Societal risk assessment is how you  
7 would label it?  
8 A. I'm just describing it. I am not  
9 inventing a label. So I'm happy to discuss  
10 concepts with you, but there's no intellectual  
11 content in a label.  
12 Q. Do you know who Martin Fischbein is?  
13 Maybe I'm mispronouncing his name.  
14 A. I have heard the name.  
15 Q. Do you agree with his statement that it  
16 is the beliefs about the risks to oneself, not  
17 generalized notions of risk, that affect  
18 people's behavior?  
19 A. This is the risk to oneself, the way I  
20 asked it.  
21 Q. Do you think that people's, what I call  
22 generalized risk perception, the risk that they  
23 apply to society, to other people, is typically

24 higher or lower than the risk perception that  
25 they have personally?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

174

1 A. It's often statistically  
2 insignificant. It's often -- there is often no  
3 statistically significant difference.

4 Q. Don't people think, "It's never going  
5 to happen to me"? They don't think that?

6 A. I certainly think a wealth of economic  
7 evidence contradicts that.

8 Q. Have you heard of the third-person or  
9 third-party effect?

10 A. Yes.

11 Q. Can you describe that for me?

12 A. You believe it will affect this other  
13 person, the third person, but not yourself.

14 That's the hypothesis.

15 Q. Do you agree with that hypothesis?

16 A. It's never been shown to be true for  
17 smoking risk questions.

18 Q. Have you shown it to be untrue? Have  
19 you tested for it?

20 A. I have not personally tested for that,  
21 except statistically, so I have not asked direct  
22 questions to get at it, but my statistical  
23 analysis linking smoking risk perceptions to  
24 smoking behavior certainly contradicts that.

25 Q. Do you know who Michael Schoenbaum is?

1           A.     Yes. I have never met him, but I know  
2     the name.

3           Q.     Have you ever served on a peer review  
4     panel for any of his work?

5           A.     No, not that I know of.

6           Q.     Would it surprise you to find out that  
7     smokers significantly overestimate their life  
8     spans?

9           A.     It depends on what information people  
10    are given. I have discussed this in the book as  
11    well. If you provide people with information  
12    regarding normal life expectancy so that you  
13    correct for the differences in information  
14    different groups have, then you will find, as I  
15    have in both 1991 and 1997, that smokers  
16    overestimate the life expectancy loss due to  
17    smoking. So that would imply that they  
18    underestimate how long they'll live.

19          Q.     Well, let me ask you this. If smokers  
20    do in fact significantly overestimate their life  
21    spans, does it square with the theory we  
22    discussed a second ago, the third-party effect?

23          A.     Well, they don't overestimate their  
24    life spans if you ask the question in a way that  
25    elicits the incremental effect of smoking as

1       opposed to the additional understanding of  
2       normal life expectancy, which Schoenbaum did not  
3       correct for.

4       Q.     I'm not asking you whether you believe  
5       that they do overestimate or not. I'm asking  
6       you, assume that smokers overestimate  
7       significantly their life spans.

8       A.     Based on what question? Based on  
9       Schoenbaum's?

10      Q.     Sure, based on Schoenbaum's.

11      A.     His question is invalid for the reasons  
12      I discussed. His question does not provide  
13      people with information regarding normal life  
14      expectancy. So his answers compound differences  
15      across smokers in their understanding --  
16      differences across smokers and nonsmokers of  
17      their understanding of normal life expectancy  
18      with people's perceptions of the incremental  
19      effect of smoking, and that result was shown  
20      before Schoenbaum. It doesn't provide you the  
21      information about life expectancy so that people  
22      can answer the question sensibly, which is what  
23      I have done.

24      Q.     Is it your opinion that smokers  
25      underestimate their life spans, then?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1       A.     Yes.

2       Q.     On what do you base that?

3           A.     The 1991 and 1997 survey results.

4           Q.     Can you tell me specifically what in

5           that led you to that opinion?

6           A.     Table 5 -- let's see. No, it's not

7           table 5. Table 8 and table 9. Table 8 is

8           misabeled. It's really the 1991 data.

9           Q.     We are looking at your book?

10          A.     No, the paper you have here. Table 8

11          is lifted from the book. So this is the 1991

12          results from my book. Table 9 are the 1997

13          results. And the average life expectancy loss

14          people assess is 12.6 years for current smokers,

15          9.9 years in 1997.

16          Q.     Has this been reported elsewhere, or is

17          this for the first time?

18          A.     I have reported it.

19                 MR. ATKESON: It's in the book.

20          A.     The '91 one is in the book. This is in

21          this paper. It's also in my Duke Law Journal

22          paper that's in press.

23                 MR. ATKESON: And it's also in the

24          survey itself.

25          Q.     Is it out there? Is it available

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

178

1          publicly?

2          A.     You can reconstruct it using the data

3          in the Audits & Surveys data. This is just my

4          tabulation based on the Audits & Surveys data.

5 Q. Does your opinion that people  
6 overperceive the risks of smoking, does that  
7 take into account the intensity of one's smoking  
8 behavior?

9 A. This is for the average smoker, so it  
10 doesn't distinguish across different categories  
11 of smokers. So the question is for one hundred  
12 smokers, for an average smoker.

13 Q. Well, did you define "smoker" anywhere  
14 in any of these surveys?

15 A. No, other than saying -- it would be  
16 the wording, "what an average cigarette smoker  
17 -- the average male smoker" is. At one point  
18 the survey breaks people into categories of  
19 current cigarette smoker, former, never smoked  
20 cigarettes regularly.

21 Q. Does that control for intensity of  
22 smoking?

23 A. Well, I'm not making differentiations  
24 regarding that.

25 Q. So the answer is no?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

179

1 A. I didn't define heavy smoker, light  
2 smoker. This would be an average across the  
3 entire smoking population.

4 Q. Tell me again what you believe an  
5 average smoker to be.

6 A. For a person who smokes the average  
7 number of cigarettes with the average risk of

8 cigarettes, whatever that might be.

9 Q. What is that?

10 A. The average risk of cigarettes, what I

11 presented in the table, I think it's on page 70.

12 Q. I'm asking you what the average smoker

13 is.

14 A. How many cigarettes do they smoke?

15 Q. How many cigarettes does the average

16 smoker smoke?

17 A. A pack and a half a day would be my

18 guess.

19 Q. Where is that in the survey?

20 A. There is no information like that in

21 the survey.

22 Q. Why not?

23 A. This is to elicit -- the purpose of the

24 survey is to elicit average perceptions

25 regarding what an average smoker is. The risk

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

180

1 perception information we have is for an average

2 smoker. If my intent was to elicit what is the

3 risk perceptions for a light cigarette, light

4 tar versus higher tar cigarette, then we would

5 also need for that to be an interesting

6 scientific reference point for what the risk

7 levels are for different kinds of cigarettes. I

8 didn't have that. I was only concerned with the

9 average smoker, so there was no reason for me to

10 differentiate.

11 Q. That's kind of quantitative, as opposed

12 to qualitative. When you just say "average

13 smoker," would you define that as qualitative or

14 quantitative?

15 A. "Average smoker" would be average

16 smoker in terms of the average risk. I'm not

17 sure what your question is. Qualitative would

18 be, is the average smoker happy or not happy.

19 That would be qualitative.

20 Q. If you asked somebody, "Does smoking

21 cause lung cancer," is that a qualitative

22 question or quantitative question?

23 A. Nobody really knows what you mean by

24 "cause." That's the problem. So is cause a

25 certainty or is cause a probability? How high

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

181

1 does the probability have to be before it's a

2 cause?

3 Q. So you can't answer that question?

4 A. What was the question? I got

5 distracted.

6 Q. The question is, if a person is asked,

7 "Does smoking cause lung cancer," is that a

8 qualitative question or is it a quantitative

9 question?

10 A. It's just a bad question. It's an

11 imprecise question.

12 Q. But which of the two is it?

13           A.     Well, if you interpret it as, "Does  
14     smoking having a probability of 1.0 of causing  
15     cancer," if that's what you mean by a cause,  
16     then that's a quantitative question. If you are  
17     asking, is there, you know, some kind of risk  
18     link that's imprecisely defined, that would be a  
19     qualitative one. So until you tell me what you  
20     mean by cause, we can't even put it in a  
21     category.

22           Q.     So you wouldn't be able to categorize  
23     it?

24           A.     I have already answered it.

25           Q.     You wouldn't be able to categorize it?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

182

1           MR. ATKESON: Asked and answered.

2           A.     Not until you define what you mean by  
3     cause. I'm not going to play the game. You  
4     define cause, I will play the  
5     quantitative/qualitative -- if cause means to  
6     you it has to be 1.0, I will be happy to answer.

7           Q.     Is that what you think this is, a word  
8     game with probability and causes? Is it a game?

9           MR. ATKESON: Argumentative. You  
10     don't have to answer that.

11          Q.     Whose game is it? Is it the tobacco  
12     industry's or your game?

13          MR. ATKESON: Why don't you ask a  
14     proper question.

15 Q. Do you think that people overestimate  
16 the risks of other diseases just because they do  
17 so with lung cancer?

18 A. It depends on the disease.

19 Q. Well, let's take birth defects again.

20 A. I don't know. Birth defects are  
21 publicized on cigarette packs. So I would  
22 expect there to be some awareness. Whether it's  
23 overperceived or not I'm not sure.

24 Q. Do you know who John Hanson is?

25 A. Yes.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

183

1 Q. What's his field?

2 A. He's a lawyer.

3 Q. Is he well respected in his field?

4 A. I'm not going to answer that. I don't  
5 know.

6 Q. In his article, "The Cost of  
7 Cigarettes" -- have you read that before?

8 A. Yes.

9 Q. -- he made the following  
10 statement: "The incentive of manufacturers is  
11 not to make their cigarettes safer but to make  
12 their cigarettes seem safer."

13 What did he mean by that; do you  
14 know?

15 A. First of all, I don't know what  
16 evidence he has for that claim.

17 Q. Let me rephrase that question. What do

18       you understand that to mean?

19           A.     He claims that the incentive of  
20       cigarette companies is to make their cigarettes  
21       seem as if they pose lower risks than they  
22       actually do.

23           Q.     Do you agree with that?

24                   MR. ATKESON:   With his understanding  
25       of what Hanson said?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

184

1           Q.     Do you understand my question?   Do you  
2       agree with that statement?

3           A.     I don't -- I disagree because I don't  
4       think that's the incentive of cigarette  
5       companies.

6           Q.     If all we were concerned about is the  
7       perception of the public and not the morality or  
8       the conduct of the industry or anything else,  
9       isn't that statement correct?

10          A.     In the long run, even if there's no  
11       regulatory sanctions, if even if there are no  
12       legal sanctions, if the public believes you have  
13       deceived them, you are going to get hammered.  
14       So my belief is that honesty is generally the  
15       best policy.

16          Q.     What do you mean, "you are going to get  
17       hammered"?

18          A.     If the public believes they are  
19       deceived, they will stop buying your product.

20 Q. So if the public became aware that they  
21 were being deceived by the tobacco industry,  
22 assuming that they were, they would stop buying  
23 the product?

24 A. That would certainly hurt you, yes.

25 Q. Is that what the tobacco industry is

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

185

1 doing now, making a cigarette that seems safer?

2 A. Not that I know of.

3 Q. Do you know if they have used their  
4 best efforts to produce a safer cigarette?

5 A. I don't monitor their internal  
6 operations.

7 Q. So if in fact they were deceiving the  
8 public, they had all this information that had  
9 not been released, you wouldn't know one way or  
10 the other, would you?

11 A. I just know the confidential documents  
12 that have been shown to me in depositions, but I  
13 don't know what other information they have  
14 internally.

15 Q. In prior depositions you have given the  
16 opinion that younger people overestimate the  
17 risks of smoking even more than older folks do.  
18 Do you recall that?

19 A. Yes.

20 Q. Is that still your opinion?

21 A. Yes.

22 Q. Can you tell me what you base that on?

23           A.     The 1985 Audits & Surveys results and  
24     the 1997 Audits & Surveys results.

25           Q.     Anything else?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

186

1           A.     There's widespread awareness among  
2     youth that smoking is either a habit or an  
3     addiction. I'm not sure how that compares  
4     exactly with adults, but it's almost a hundred  
5     percent.

6           Q.     When you say younger, what age groups  
7     did you study?

8           A.     1985 started at age 16. 1997 picks  
9     them up at age 18.

10          Q.     What about kids under 16?

11          A.     The habit and addiction results pertain  
12     to them. There are other less quantitative  
13     questions pertaining to younger age groups in my  
14     "Smoking" book, but they are not part of the  
15     Audits & Surveys data.

16          Q.     Is it your opinion, then, that a  
17     16-year-old can make an informed decision to  
18     smoke?

19          A.     What is -- what do you mean by an  
20     informed decision to smoke?

21          Q.     They know all the risks?

22          A.     Well, they overestimate the risks.  
23     They overestimate the risk of lung cancer. They  
24     overestimate those effects.

25 Q. When you say "they overestimate the

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

187

1 risks," can you tell me what you mean by that?

2 A. Their risk perceptions for lung cancer  
3 are higher than those for adults.

4 Q. Do you think a 16-year-old understands  
5 all of the implications of getting lung cancer?

6 A. Well, we know for the 16-to-21 age  
7 group, which is as refined as I think we can  
8 break it down for the '85 data, that lung cancer  
9 risk perceptions diminished their smoking  
10 probability by exactly the same amount as for  
11 their older counterparts. So there's no  
12 statistically significant difference in how lung  
13 cancer risk perceptions affect behavior for  
14 16-years-olds as opposed to the general  
15 population.

16 Q. But you think a 16-year-old understands  
17 all of the medical care and everything else that  
18 goes with getting lung cancer?

19 A. You don't have to know all the details  
20 for it to stop you, for you to know smoking is  
21 bad. So you don't have to know precisely every  
22 event to know that there's a very adverse  
23 outcome that you don't want to happen to you.

24 Q. So it's your opinion that 16-year-olds  
25 understand that there's a very adverse outcome

MAHANEY REPORTING SERVICES

1       that could happen to them if they smoked?

2           A.     Yes.

3           Q.     And you base that upon the data that  
4       you gathered in the '85 and '97 surveys?

5           A.     The '85 survey -- '97 picks them up at  
6       age 18.

7           Q.     On page 120 of your book -- you don't  
8       need to look unless you want to -- you compare  
9       smoking to driving. I'm sorry. You compare --  
10      right, you compare smoking to driving, as it  
11      relates to young kids.

12          A.     Right.

13          Q.     Why didn't you compare it to, say,  
14      crack cocaine?

15          A.     I don't have good data on crack  
16      cocaine.

17          Q.     Do you think that smoking is comparable  
18      to driving?

19          A.     Well, driving imposes more social costs  
20      than smoking.

21          Q.     How so?

22          A.     The calculations by Manning et al., the  
23      Rand Study, indicated that alcohol use,  
24      principally drunk driving, has very harmful  
25      social effects, much worse than their estimates

1 for any of the components related to cigarettes.

2 Q. You are saying "social effects." Are  
3 you making a distinction between social effects  
4 and medical costs?

5 A. No, I'm thinking of harm to others as  
6 opposed to private costs to the individual.

7 Q. Let me ask you, what kills more people  
8 in the United States per year: smoking or car  
9 accidents?

10 MR. ATKESON: Let me ask, we are  
11 away from 16-years-olds, and you are just in the  
12 general population?

13 Q. General population.

14 A. Although more people die from smoking,  
15 car accidents kill more people involuntarily.

16 Q. Why do you suppose we have youth access  
17 laws if kids overestimate their chances of dying  
18 as a result of smoking?

19 A. I discussed this briefly in the book.  
20 We reserve a lot of decisions in society until  
21 you are older: the right to vote, the right to  
22 drive a car, the right to see R-rated movies.  
23 So I would say it's part of that general cluster  
24 of concerns. We want to reserve certain  
25 important things. You can't get married at age

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

190

1 12, for example.

2 Q. You said kids can make an informed  
3 decision about smoking when they are 16 years

4 old?

5 A. What I said is that in my sample, they  
6 had accurate risks beliefs, and it affected  
7 their risk -- their propensity to smoke the same  
8 way.

9 Q. Is that different than what I said?

10 A. That may not be everything, but they do  
11 seem to understand the costs of smoking as  
12 well. So I have seen no documentation of their  
13 inability to make decisions at age 16.

14 Q. What documentation besides the '97  
15 survey data and the '85 survey data have you  
16 seen that makes you conclude otherwise?

17 A. Well, we have the results on the  
18 perception of the habit-forming or addictive  
19 qualities of cigarettes. And almost universally  
20 close to a hundred percent of youth believe that  
21 cigarette smoking is either a habit or an  
22 addiction, or both.

23 Q. Why do we have youth access laws if  
24 kids can make an informed decision?

25 MR. ATKESON: Asked and answered.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

191

1 MR. GRUENLOH: That's a different  
2 question.

3 A. There are certain kinds of important  
4 decisions for your life that we reserve until  
5 you are older, and that includes going to R-

6 rated movies, et cetera, along the same lines I  
7 just discussed.

8 Q. As a policy analyst -- I'm asking you  
9 to put your policy analyst hat on. Would you  
10 opine that kids should be allowed to start  
11 smoking when they are 16, based upon the data  
12 that you've seen?

13 A. Well, 16, they are still minors, and  
14 there are a lot of decisions that I think you  
15 should be accountable to your parents or whoever  
16 your guardian is at that time. So I think that  
17 would be a household decision, a parental  
18 decision. Until recently, most states thought  
19 it was okay at age 16 to smoke.

20 Q. So you would at least go so far as to  
21 say that it should be a household decision, as  
22 opposed to a decision made by a government?

23 A. No, I'm saying that I would not turn  
24 this decision over entirely to the individual  
25 16-year-old.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

192

1 Q. Why not, if they make a well-informed  
2 decision?

3 A. Because parents, as long as they are  
4 minors, still have a say in how they should run  
5 their lives.

6 Q. Have you ever heard the saying, the  
7 invincibility of youth?

8 A. Well, it's often been denied in recent

9 research, but yes, people have hypothesized that  
10 that's the case.

11 Q. What does it mean?

12 A. People who claim that believe that  
13 youths think that nothing can possibly hurt  
14 them, but this result has been contradicted by  
15 recent psychological research with adolescents.

16 Q. How do you define the term "addiction"?

17 A. It's a cost of change, so high  
18 transactions cost of change. Going further  
19 into the addiction model, if you -- the  
20 rational addiction model would be if you  
21 anticipate that you are going to be addicted to  
22 something, then the future consumption of the  
23 product should affect your current consumption.  
24 You would be forward-looking in your behavior,  
25 by that.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

193

1 Q. It's hard to quit?

2 A. Costly to change, hard to quit.

3 Q. But your definition would be costly to  
4 change?

5 A. That's the same thing as hard to quit.  
6 So it's a transactions cost associated with  
7 changing your behavior.

8 Q. Have you ever done any economic  
9 analysis on what the private costs to smokers  
10 are to get rid of their addiction?

11 A. No, I have done analysis of the private

12       benefits to smokers of smoking.

13           Q.     But not the costs?

14           A.     We don't really know what those costs  
15       are, and we don't know how many people really  
16       want to quit.

17           Q.     What are the benefits?

18           A.     People willing to pay more for  
19       cigarettes than they are currently charged  
20       because they enjoy smoking.

21           Q.     Do you know what the actual definition  
22       of addiction is?

23           A.     It's a medical definition, not an  
24       economic definition.

25           Q.     Do you know what it is?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

194

1           A.     I have read it. I believe it includes  
2       some physical effects. But I leave these  
3       matters to doctors. I'm not going to tread on  
4       their turf.

5           Q.     Do you know what the tobacco industry's  
6       position on addiction is? Do they think it's  
7       addictive or not?

8           A.     I don't know. There's been so much  
9       debate over what the distinction is between  
10      habit-forming and addiction with the different  
11      -- different Surgeon Generals had different  
12      definitions. I'm not sure what their official  
13      position is. I don't think many people believe

14       it's not hard to quit. The head of  
15       R. J. Reynolds quit smoking, and I believe he  
16       came out and said it was hard to quit.  
17       Q.     And you think "hard to quit" is the  
18       same as addiction; is that right?  
19       A.     From an economic standpoint it is, with  
20       the additional proviso regarding the  
21       anticipation of future consumption.  
22       Q.     Assume with me for a moment that a  
23       particular respondent, let's say in the 1997  
24       survey, Mr. X, he did not believe that  
25       cigarettes were addictive. How would that --

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

195

1       how might that affect his risk perception of  
2       cigarettes?  
3       MR. ATKESON: A smoker or  
4       nonsmoker?  
5       MR. GRUENLOH: A smoker.  
6       A.     Well, he is asking about the average --  
7       you are asking about the average risk to a  
8       cigarette smoker, which is undefined, but you  
9       still know some people quit smoking, some people  
10       don't, so it's over a population mix. So it  
11       would be the average over the population mix of  
12       smokers.  
13       Q.     Maybe I'm just not understanding your  
14       response. How does it affect Mr. X's decision,  
15       his risk perception?  
16       A.     It doesn't. He just needs to know what

17 the pattern of smoking is in society. That's  
18 the reference point.

19 Q. What if he didn't know that cigarettes  
20 are hard to quit?

21 A. It doesn't matter. All he needs to  
22 know is that people out there smoke, they tend  
23 to smoke, some people stop smoking, some don't  
24 stop smoking. You don't know if it was hard for  
25 people to quit or not.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

196

1 Q. You don't have to know if the people  
2 that -- it's all right if he thought, Mr. X  
3 thought, people that quit smoking did so just  
4 because they chose to, and it was easy for them?

5 A. Same thing. If you had asked me,  
6 "What's the average risk posed by Chevrolets,"  
7 whether buying a different model car was costly  
8 or not, so -- so if the transactions cost of  
9 buying a Chevrolet, once you had already bought  
10 one, if they were high, it doesn't affect my  
11 risk assessment of people who drive Chevrolets.  
12 You look at the population of drivers of  
13 Chevrolets and assess their risk. So I don't  
14 see why it matters.

15 Q. What if Mr. X were 16 and he planned on  
16 quitting before his 17th birthday, and he had no  
17 idea that smoking was addictive? Might that  
18 affect his risk perception?

19           A.     Well, the question is about -- you are  
20     asking about his risk perception. In terms of  
21     the answer to the question, no, because the  
22     question is about the life expectancy of an  
23     average male smoker.

24           Q.     Do you think that someone who doesn't  
25     know that smoking is addictive is making an

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

197

1     efficient choice when they choose to smoke?

2           A.     Well, I'm not sure who these people  
3     are, because everybody, virtually everybody,  
4     believes smoking is either a habit or an  
5     addiction.

6           Q.     The tobacco industry doesn't believe  
7     that.

8           A.     They don't believe it's a habit?

9           Q.     What is their position on addiction?  
10    Do you know?

11                   MR. ATKESON: He didn't know. Asked  
12    and answered.

13          Q.     I just told you.

14          A.     My comment was regarding habit.

15          Q.     What's the difference between  
16    habit-forming and addictive?

17          A.     There's a medical definition that makes  
18    a distinction based on physical effects. But  
19    from an economic standpoint there are costs of  
20    change. In the case of Becker's addiction model  
21    there's anticipation of future consumption,

22 which would affect your present consumption.  
23 Q. Do you think the public makes any  
24 distinction between hard to quit, habit-forming  
25 and addiction? Do you think it's all the same

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

198

1 in their mind?

2 A. I think when you mention addiction,  
3 they start conjuring images of heroin addicts.  
4 But I think that the public could not give you  
5 precise definitions of these different terms.

6 Q. Assume with me for a moment that the  
7 tobacco industry denies that cigarettes are  
8 addictive. Why do they do that? Why do they  
9 quibble, or why do they make a distinction about  
10 that definition, when under your theory, if they  
11 came out with all of the information, it would  
12 lower people's risk perception?

13 MR. ATKESON: Objection. Calls for  
14 speculation.

15 A. I don't know what the cigarette  
16 industry's position is on addiction.

17 Q. Doctor, that's why I just told you.

18 A. Well, if people --

19 MR. ATKESON: Do you want him to  
20 guess why they have that position? If your  
21 description is --

22 Q. I said, assume that their position is  
23 that cigarettes are not addictive, and I want

24       you to tell me why they have taken that  
25       particular stance.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

199

1               MR. ATKESON: If he knows.

2               Q.     If you know.

3               A.     I don't know why they have done this.

4               MR. GRUENLOH: Why don't we take  
5       about five minutes.

6

7               (Recess taken.)

8

9               Q.     What is cognitive denial?

10              A.     I'm not sure. I have heard of  
11       cognitive dissonance.

12              Q.     What's that?

13              A.     The hypothetical situation which could  
14       arise, for example, would be a worker would try  
15       and put out of his mind certain risks that might  
16       befall him as part of his job, as a way to get  
17       through the risk.

18              Q.     So for instance, that worker would say,  
19       "It's not going to happen to me"?

20              A.     Or deny the risk altogether, just deny  
21       that there is even a risk.

22              Q.     But he could just say, "That's not  
23       going to happen to me"?

24              A.     That's not the usual version of it.

25              Q.     The usual version is --

1 A. Put it out of your mind.

2 Q. Denying that the risk exists?

3 A. Just try and put it out of your mind.

4 Q. How does that relate to the third-party  
5 effect that we were talking about earlier? Same  
6 thing?

7 A. One is putting it out of your mind, one  
8 is that it's not happening to me, it's happening  
9 to other people, as you have defined it.

10 Q. Are the two theories consistent?

11 A. Well, they are different theories about  
12 different mechanisms.

13 Q. Can they both be true without one being  
14 incorrect?

15 A. They could both be true, one could be  
16 true, both could be false.

17 Q. Did you correct for cognitive  
18 dissonance in any of the survey work that you  
19 did?

20 A. Well, I tested whether smokers' risk  
21 beliefs actually did affect their behavior,  
22 which, it would not if there were cognitive  
23 dissonance, and you can reject the hypothesis  
24 that there is no significant relationship  
25 between smoking risk beliefs and smoking

1 behavior. Also, there is no apparent  
2 two-directional relationship where smoking in  
3 turn affects your risk beliefs.

4 Q. Where was that done?

5 A. In my "Smoking" book.

6 Q. Can you tell me just a chapter?

7 A. The "Smoking Probability" chapter.

8 Q. Chapter 5?

9 MR. ATKESON: It should be.

10 A. Chapter 5, and probably also the  
11 appendix.

12 Q. And we discussed earlier that these  
13 questions -- let me just ask it. These  
14 questions were asked about people's perception  
15 of a hundred smokers, not their perception of  
16 their own risk; correct?

17 A. The wording was, "Out of one hundred  
18 smokers, how many of them do you think will get"  
19 this particular ailment, lung cancer or death.  
20 And as I have indicated before, I found that  
21 questions such as these are in fact a reasonable  
22 way to elicit individual risk beliefs.

23 Q. What is hypothetical bias?

24 A. Well, it depends on the context. In  
25 contingent valuation surveys, there would be a

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 hypothetical bias in terms of being willing to  
2 pay more money for a hypothetical commodity,

3 using hypothetical interview money, than there  
4 would be using real money to pay for real  
5 commodities.

6 Q. What would be a hypothetical bias as it  
7 relates to this survey?

8 MR. ATKESON: The 1997 survey?

9 Q. The '97 survey.

10 A. I don't see any hypothetical biases.

11 Q. So you obviously didn't correct for it?

12 A. There's nothing to correct for. My  
13 questions are real ways to get at real risk  
14 perceptions.

15 Q. So you do not agree that hypothetical  
16 bias is present in the 1997 survey?

17 A. That's what I just said.

18 Q. Would information on how respondents  
19 perceived other risks be helpful at all?

20 A. No. What we care about is the risks  
21 associated with your particular decision,  
22 smoking versus no smoking, what's the  
23 incremental risk. For smoking in your life,  
24 what's the incremental risk. And to answer that  
25 question, you don't need information on other

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

203

1 risks.

2 Q. Let's take Mr. X again. If Mr. X, a  
3 survey respondent, a smoker, if you found out  
4 that he believed that he had a 50 percent chance

5 of dying in a car accident, a 40 percent chance  
6 of dying of AIDS, and a 40 percent chance of  
7 dying of smoking, would that tell you anything  
8 about his risk perception?

9 A. It tells me this person is going to die  
10 very soon. But if you look at objective risk  
11 perception studies, the risk the people assess  
12 with smoking is so much higher than the risks  
13 that they assess with respect to automobile  
14 risks, that the kind of example you gave  
15 wouldn't even come up.

16 Q. So it's your opinion that people's  
17 perception is that risks as it relates to  
18 smoking are much higher than anything else?

19 A. These probabilities are higher than any  
20 other probabilities I have seen assessed for any  
21 other risk.

22 Q. Where can you find those other  
23 probabilities reported?

24 A. Well, I have got a Rand Study with  
25 several hundred people just in Arizona, with

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

204

1 risks ranging from heart disease, lung cancer,  
2 whatever, a whole series of causes of death.  
3 And these studies have been in the literature  
4 for approximately 25 years, on mortality risk  
5 perception.

6 Q. And those include, say, for instance,  
7 an individual's risk perception of dying in an

8 automobile accident?

9 A. They include society. Basically they  
10 ask people, how many people in the United States  
11 are going to die of these different things. So  
12 it's a risk assessment for different outcomes.

13 Q. So in your opinion, it's not important,  
14 or you don't need to know how Mr. X in a survey  
15 perceived the risk of other things as compared  
16 to his risk of smoking?

17 A. That's correct.

18 Q. You don't need to know the relative  
19 risk?

20 A. I just said that, yes.

21 Q. That's another way of asking the  
22 question. Is the answer still yes?

23 A. Yes.

24 Q. Would it cast any doubt on your  
25 conclusion, or would you want to do any

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

205

1 follow-up work if you found that smokers  
2 overperceived the risk of everything, not just  
3 smoking?

4 A. Well, we know that that's not true from  
5 the job-safety area, because we've got  
6 information on smoking risk perception and  
7 risk-money tradeoffs. I have already written  
8 about that and shown that's not the case.

9 Q. If you found that to be the case, would

10       that cast any doubt on your conclusions?

11           A.     I have got -- let me review the

12       bidding. I have solid empirical evidence

13       supporting this view. What you have got is a

14       conjecture by John Hanson without any empirical

15       evidence on something else. So in other words,

16       in terms of what weight to place on it, I have

17       the empirical evidence that backs me up and is

18       statistically significant.

19           Q.     All I have asked you to do is make an

20       assumption.

21           A.     I can't make it because it's

22       contradicted by the studies I have done for job

23       risk and workers.

24           Q.     So you are refusing to make that

25       assumption?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

206

1           A.     I am saying the assumption is false.

2           Q.     You have that personal opinion of the

3       assumption?

4           A.     It's ample empirical evidence.

5           Q.     You have your own empirical evidence of

6       that assumption, but can you answer the question

7       with that assumption?

8           A.     Try posing the question again. I don't

9       remember what the question is. You have asked

10       about six of them.

11           Q.     Assume that you found that smokers

12       overperceive the risks of everything, not just

13 smoking. Tell me, would that cast any doubt on  
14 your conclusions, or would you want to look at  
15 your conclusions again?

16 A. It wouldn't cast doubt on them, because  
17 you care about the incremental effect of the  
18 risk for a particular activity, and it affects  
19 their behavior, which I have documented. So  
20 that there's no reason to believe that they are  
21 dismissing these risk perceptions for any  
22 reason. And there's no evidence to even provide  
23 -- the evidence we have got contradicts that  
24 assumption.

25 Q. What if they believed, "I'm going to

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

207

1 die of something, so it might as well be  
2 smoking"?

3 A. I know of no studies that have shown  
4 people have risk beliefs of that magnitude, you  
5 know, in terms of an immediate risk of death.

6 Q. I would like to move on to your opinion  
7 concerning what I call the death benefit, or  
8 early death theory. Do you have another name  
9 for that?

10 MR. ATKESON: The lifetime analysis.

11 Q. Is that what you would prefer to use?

12 A. I called it lifetime analysis because I  
13 don't view it as a death credit. I just view it  
14 as a sensible way to do the analysis.

15 Q. When you say lifetime analysis, are you  
16 also including excise tax in that?

17 A. No.

18 Q. So if we talk about lifetime analysis,  
19 we are only talking about the death credit? I  
20 just want to make sure we are talking about the  
21 same thing.

22 A. We are talking about, how does the  
23 length of smokers' lives affect how you would  
24 calculate the financial cost imposed on the  
25 state.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

208

1 Q. Okay. I think I can deal with that.  
2 Can you explain the theory to me?

3 A. The theory, which I have regarded as my  
4 general approach that I have taken, is the  
5 question you want to answer is, "But for  
6 smoking, what would the cost to the states be?"  
7 And for the purposes of doing this calculation,  
8 it's only appropriate to charge smokers for the  
9 costs incurred and give them credit for the  
10 monies they have saved during the period they  
11 are alive.

12 So it's not appropriate to charge  
13 them for costs that would have been incurred had  
14 they had the same life expectancy as nonsmokers,  
15 for example.

16 Q. Have you applied that theory to the  
17 State of Washington's case?

18           A.     I would apply it to any case.  
19           Q.     Have you?  
20           A.     I have done no separate analysis for  
21           this case. I have done analyses for all 50  
22           states, but I'm not testifying on damages except  
23           in terms of the concept.  
24           Q.     So tell me, what do you base your  
25           opinion on when you opine about this theory?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

209

1           A.     I view that as the only sensible, sound  
2           economic approach. If you are going to look at  
3           the costs associated with an activity, you can't  
4           invent costs that never occurred, which is what  
5           I was referring to in terms of, you have to stop  
6           charging smokers for costs after they are dead,  
7           because there are no costs being generated. So  
8           that certainly has to be included.  
9                    The second aspect, if you are  
10          looking at cost, you want to look at net costs  
11          to the state. So you can't -- let's say there's  
12          two different accounts: there's Medicaid part A  
13          and Medicaid part B. If smokers raise costs in  
14          Medicaid part A but lower them in part B, it's  
15          inappropriate to just charge them for the cost  
16          that went up in part A. You want to give them  
17          credit for what they saved you in part B, to get  
18          the net cost figure.  
19          Q.     So what do you base your opinion on?

20 Is that just your own logic?  
21 A. It's -- this is basic sound economics  
22 for how you would want to do the accounting to  
23 properly account for the net social costs. So  
24 this is not just my own logic. This is how you  
25 would account for externalities in any context,

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

210

1 such as pollution or anything else. You want  
2 the net costs.

3 Q. Is this lawsuit about social costs?

4 A. It's about financial costs to the State  
5 of Washington, so it's not full social costs.

6 Q. What are the externalities that are  
7 associated with tobacco?

8 MR. ATKESON: In what context?  
9 Individual, state, societal?

10 Q. Why don't you define "externality" for  
11 me first.

12 A. That would be a cost or an effect on  
13 others that's not internalized in the private  
14 decision.

15 Q. Then would you tell me what the  
16 externalities that are associated with tobacco  
17 are, and I don't want to make any distinctions.  
18 Tell me what all of them are.

19 A. I'm not sure I know all of them, but  
20 the principal ones would be Social Security  
21 costs and retirement costs and pension costs  
22 would be less, if smokers die sooner and do not

23 collect benefits. Nursing home costs would be  
24 less, to the extent that smokers spend less time  
25 in nursing homes. If medical care costs go up

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

211

1 or fires go up because of smokers, these would  
2 be cost increases.

3 Environmental tobacco smoke would be  
4 an external cost. The taxes smokers contribute  
5 to fund retirement plans would be an external  
6 benefit. I think those are the principal  
7 components I have analyzed.

8 Q. And you included medical costs in that;  
9 correct?

10 A. Yes.

11 Q. As a cost?

12 A. Medical comes out as a cost. Nursing  
13 home, which I view as medical, is a negative.  
14 So one is positive; one is a cost savings.

15 Q. Well, we'll get to that in a second.  
16 How do you do a proper economic analysis in  
17 terms of cost?

18 A. Of what?

19 Q. Of anything. When you do a  
20 cost-benefit analysis, don't you have to look at  
21 all costs and all of the benefits?

22 A. Ideally you want to get a handle on the  
23 big cost components, so if there are little  
24 ones, it doesn't really matter. You want -- you

25 never pick up everything.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

212

1 Q. Ideally you would pick up everything,  
2 wouldn't you?

3 A. If the cost of policy analysis were  
4 free and if information acquisition is free, you  
5 would pick up everything, but we don't live in  
6 that world.

7 Q. Did you do that in your analysis? Did  
8 you pick up all of them?

9 A. I don't live in a world of free  
10 information, so I did the best I could with the  
11 available data and the resources I had.

12 Q. So the answer is --

13 A. No, no analysis ever includes  
14 everything, usually.

15 Q. Let me make sure I have got all the  
16 so-called benefits of tobacco that you looked  
17 at. You looked at nursing home, retirement,  
18 pension plans, Social Security, taxes. Anything  
19 else?

20 A. I think those are the main cost  
21 components.

22 Q. Those are the main benefit components,  
23 alleged benefits?

24 A. Right.

25 Q. What are the costs that you have looked

MAHANEY REPORTING SERVICES

1 at? Medicaid, I assume?

2 A. Medicare and Medicaid, both.

3 Q. Both of them together or separately?

4 A. I think I did under and -- above and  
5 below 65. I have done it by state where I have  
6 broken out Medicaid.

7 Q. Anything else?

8 A. Hospital costs, state hospital costs,  
9 other state costs.

10 Q. Private costs?

11 A. So I have done private externalities  
12 too, not just externalities to the states.

13 Q. I'm sorry. So you did include private  
14 costs?

15 A. Yes, I have done a total societal cost,  
16 all externalities, as well as broken it -- doing  
17 it for federal and state governments.

18 Q. So you include loss of life? You put a  
19 number for loss of life?

20 A. For environmental tobacco smoke, I did.

21 Q. What about just regular smoking?

22 A. That's a private cost. That's an  
23 individual cost that's internalized by the  
24 smoker. That's not an externality.

25 Q. So you didn't put in a value in this

1 for the loss of life for a smoker?

2 A. It would be incorrect to do that. It

3 would not be appropriate.

4 Q. What about the loss of consortium?

5 A. I didn't put a value on that either.

6 Q. What about the loss of a family income?

7 A. That's not in there either.

8 Q. What about the loss of state tax

9 revenue because the person may have died early?

10 A. I put the loss contributions to

11 retirement and pension plans in there. I didn't

12 include lost income taxes, nor did I include

13 lost services the person would have consumed.

14 Q. What about the costs to the state due

15 to tobacco-related fires? Did you include that

16 as one of the costs?

17 A. I did fires in general. I think when

18 you break it down into a state component that's

19 proportional, it doesn't really matter very

20 much.

21 Q. What about administrative costs to the

22 state, extra hospital beds, extra personnel to

23 take care of lung cancer patients?

24 A. If there's an additional administrative

25 cost that's not picked up in the medical cost,

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

215

1 that's not picked up.

2 Q. What about cost paid by the state to

3 clean up cigarette butts?

4           A.     No.

5           Q.     Let's go back a second.  You said you

6           didn't include loss of life by the smoker;

7           correct?

8           A.     That's correct.

9           Q.     Can you tell me again why you didn't do

10          that?

11          A.     It's a private cost to the individual,

12          and it's not part of the calculation of

13          financial externalities.

14          Q.     Why isn't that an externality?

15          A.     Because it's an individual issue.

16          It's, loss of life is the value to the

17          individual.  By definition, individual costs and

18          benefits are not externalities.  Externalities

19          are effects on others.

20          Q.     Back to your lifetime analysis, that's

21          a longitudinal approach; correct?  Or is it

22          cross-sectional?

23          A.     It's a lifetime analysis.

24          Q.     What's the difference between a

25          lifetime analysis and a longitudinal analysis?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

216

1           A.     Longitudinal makes assumptions about

2           the data base, that you actually track people

3           over time.  So mine is bridged over the Manning

4           study, some of which were just cross-sectional

5           as opposed to longitudinal studies, but they

6 estimated over the lifetime the pattern of  
7 people's expenditures.

8 Q. Under your lifetime approach, it's  
9 better if somebody, a smoker, dies of lung  
10 cancer quickly as opposed to lingering for a  
11 couple of years, incurring extra medical bills;  
12 is that correct?

13 MR. ATKESON: Can you say what you  
14 mean by "better"?

15 MR. GRUENLOH: Better economically  
16 for the state.

17 A. Well, I wouldn't put a value judgment  
18 on the word "better," which implies that there's  
19 something good about this whole venture that you  
20 are doing in terms of calculating costs to the  
21 state. From the standpoint of the state's  
22 costs, if there's no other contribution the  
23 person is going to make, and you are simply ill  
24 and you are definitely going to die, the longer  
25 you live, the more it's going to cost the

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

217

1 state.

2 Q. So it's better economically for the  
3 state if the person dies more quickly as opposed  
4 to lingering and incurring more hospital bills?

5 A. Once again, you are attaching a value  
6 judgment to this.

7 Q. I'll just say "better economically."

8 A. Well, but better from a standpoint of

9 social welfare? You are attaching a value  
10 judgment to the accounting exercise the state  
11 has constructed to try and recoup costs.

12 Q. Under your theory, your lifetime  
13 analysis, the state saves money if a smoker dies  
14 quickly of a smoking-related disease as opposed  
15 to lingering and incurring more medical bills;  
16 is that correct?

17 A. This is not under a theory. This is  
18 reality. If you are looking at the cost paid by  
19 the state, the longer the smoker stays alive and  
20 you are paying those costs, and if there is  
21 nothing else going in from the smoker, no matter  
22 what theory you use, the cost to the state will  
23 be higher the longer the smoker incurs these  
24 costs. This is a fact.

25 Q. Well, how does that reality, if that's

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

218

1 what you want to call it, how does that reality  
2 square with a proper theory of deterrence?

3 A. What -- since when are we even in a  
4 world of deterrence? What we are talking about  
5 here is the efforts by the state to recoup  
6 costs. If you are trying to calculate costs,  
7 you want to do that properly, no matter what  
8 your theory is. So if you care about  
9 deterrence, you care about actual costs. So  
10 what if what you are trying to do is financial

11 costs? If that's what you want to do, you have  
12 to measure them correctly.

13 Q. What if you are trying to deter  
14 improper conduct?

15 A. What's the harm from the improper  
16 conduct? If the only harm is a financial cost,  
17 then the financial cost is the penalty. You  
18 don't invent some other cost.

19 Q. Let me ask you this. Should cigarette  
20 manufacturers be encouraged or maybe even  
21 subsidized to produce cigarettes that kill  
22 people, as opposed to just cause illness?

23 A. Well, you are assuming that social  
24 policy should be based on the principle  
25 underlying these state lawsuits. And as I have

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

219

1 pointed out elsewhere, that -- there's more  
2 going on with smoking decisions than just the  
3 financial interest of the state. That should  
4 not be our paramount concern, whether the State  
5 of Washington makes money off this or not.

6 Q. When you did your lifetime analysis,  
7 you looked at both Medicaid and Medicare costs;  
8 correct?

9 A. That's correct.

10 Q. Is it your understanding that this  
11 lawsuit includes Medicare costs?

12 A. I believe it just included Medicaid  
13 costs, but I'm not working on the damages issue.

14 Q. So you don't believe that your lifetime  
15 analysis, then, can be applied to the Washington  
16 state case?

17 A. No, I didn't say that. The principle  
18 can apply. What I'm saying is that I'm not  
19 preparing damages numbers for the State of  
20 Washington.

21 Q. But --

22 A. That's not my role in the case.

23 Q. But you have not --

24 MR. ATKESON: Let me just make this  
25 clear. Our designation of him on this issue is

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

220

1 simply to say that the proper method for  
2 measuring these damages is a lifetime analysis.  
3 He is not saying that, you know, what he did in  
4 the National Bureau of Economic Research article  
5 or other articles is what should be followed for  
6 determining Washington's; he's just saying it's  
7 the right approach.

8 MR. GRUENLOH: Okay. Thank you.

9 Q. So you didn't adjust your lifetime  
10 analysis for this case; correct?

11 A. I have done nothing on the damages side  
12 for this case.

13 Q. And yet you are going to opine that  
14 that theory can properly be applied to this  
15 case?

16           A.     The theory is how you would  
17     procedurally account for the social costs of  
18     cigarette smoking. I have done that nationally,  
19     I have done it for the federal government, I  
20     have done it for all the states.

21           Q.     Well, the costs that you include in  
22     that, that's part of the theory, isn't it?

23           A.     I don't know what this lawsuit picks  
24     up. I did cost for a set of costs that I  
25     designated for my article, but that was before

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

221

1     this lawsuit ever even happened, so I can't  
2     anticipate what costs you are going to claim.

3           MR. ATKESON: I would also point  
4     out, in his article, where he goes through all  
5     50 states, it's only on Medicaid.

6           MR. GRUENLOH: In which article?

7           MR. ATKESON: You have a draft of it  
8     in what we produced. It's coming out in the  
9     Journal of Law and Economics.

10          Q.     What study or principle of economics do  
11     you rely upon or use in your determination that  
12     the value of human life should not be included  
13     as an externality?

14          A.     The definition of what an externality  
15     is. And since I'm the one who developed value  
16     of life numbers throughout the -- used  
17     throughout the federal government, I know what  
18     they are used for, so I at least know what my

19 own numbers are.

20 Q. Let me ask you just quickly one  
21 question about this. On discount rates, would  
22 it be better for the tobacco industry -- and I  
23 know I'm using the word "better" again, but  
24 financially better -- if in doing this lifetime  
25 analysis you used a higher or lower discount

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

222

1 rate?

2 MR. ATKESON: Well, can you explain  
3 what outcome you are looking for? That's an  
4 objection.

5 MR. GRUENLOH: Okay. Thanks.

6 A. In terms of the costs, the costs tend  
7 to be more immediate than the benefits, so a  
8 higher discount rate would place a greater  
9 weight on the immediate costs; a lower discount  
10 rate would place a lower weight on these costs.  
11 Or higher weight on these -- lower relative  
12 weight on these costs.

13 Q. And you used three percent; correct?

14 A. Yes, I show the results for zero, three  
15 and five.

16 Q. Do you show all the results for five?

17 A. As many as I was able to get away with,  
18 with the people determining the length of the  
19 article.

20 Q. I am handing you what's been marked as

21 Exhibit 1404, but I think it's 1405, to your  
22 deposition. Can you --  
23 A. It's the article I wrote, "Cigarette  
24 Taxation and the Social Consequences of  
25 Smoking."

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

223

1 Q. Can you turn to page 75 of that for me?  
2 A. They are cut off.  
3 Q. I am looking for table 4, if you can  
4 find that.  
5 A. Table 4.  
6 Q. On table 4 you have got numbers here  
7 reported for the discount rate, and I'm not  
8 worried about the numbers with the tar  
9 adjustment. Let's say just the first three  
10 columns. They show the effect of three discount  
11 rates, zero, three and five percent; correct?  
12 A. Right.  
13 Q. The bottom there, where you have total  
14 net costs, for zero percent the number comes out  
15 negative; correct?  
16 A. Yes.  
17 Q. For three percent the number comes out  
18 negative; correct?  
19 A. Yes.  
20 Q. For five percent the number comes out  
21 positive?  
22 A. That's correct.  
23 Q. Can you explain that?

24           A.     Well, in the first two sets of  
25     estimates, cigarettes on balance save society

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

224

1     money, excluding excise taxes; and at five  
2     percent there's a cost of cigarettes of 27 cents  
3     a pack, excluding excise taxes.

4           Q.     And you used three percent in your  
5     findings? You didn't use five percent; correct?

6           A.     I show the results for all, but I place  
7     the greatest weight on three percent.

8           Q.     Turn to page 94. Actually, I  
9     apologize. It's a couple before that. I'm  
10    looking at table 11. Where you've got your  
11    findings, you only report the values based on a  
12    three percent discount rate; correct?

13          A.     That's all the editor was willing to  
14    publish, because it was too unwieldy.

15          Q.     Did you do it for five?

16          A.     I did it for all three.

17          Q.     What was the result with five percent?

18          A.     I honestly don't remember the results.

19          Q.     Did it cost the state or was there a  
20    savings?

21          A.     Well, it would cost the state already,  
22    without counting environmental tobacco smoke, so  
23    if you count it, too --

24          Q.     I'm asking, exactly as you did it in  
25    this article.

1 MR. ATKESON: He's answering.

2 Q. With five percent, was there a savings  
3 to the state?

4 A. Are you going to let me answer?

5 Q. Sure. Please do.

6 A. At five percent, even not counting  
7 environmental tobacco smoke, there's costs to  
8 society. These are not costs to the state.  
9 These are costs to society. If you add in  
10 environmental tobacco smoke, the only change in  
11 table 11 versus the other one is going to be an  
12 additional cost figure. So that's also going to  
13 be an additional cost. Neither of these things  
14 include excise taxes, and none of these  
15 calculations are for the state. They are for  
16 the whole society.

17 Q. I understand that, but would it come  
18 out negative or positive?

19 A. For what? The state?

20 Q. The same -- for the state.

21 A. I haven't done this for the state with  
22 the externalities and everything.

23 Q. Doctor, you just told me you ran it for  
24 all the numbers.

25 A. This is a different article. Yes.

1       These numbers are not for the state. These are  
2       for society. This article has nothing to do  
3       with individual state calculations. That's a  
4       different paper.

5           Q.     Why did you choose those particular  
6       rates, zero, three and five?

7           A.     Because the real rate of return is in  
8       that range. In fact, I think it's below three  
9       percent. One to three percent is where the real  
10      rate of return has been in the United States.

11          Q.     You based a lot of -- at least I would  
12      say you took those rates from Manning's work;  
13      correct: the zero, three and five?

14          A.     No, I didn't have to take those from  
15      Manning. I came up with my own rates.

16          Q.     Turn to page 99 for me if you would.  
17      There's a discussion there at the top right-hand  
18      corner, and you briefly discuss the rates that  
19      Manning used. You wrote he used zero percent  
20      and five percent. Didn't he also use ten  
21      percent?

22          A.     I don't know what else he used, but  
23      this sentence refers not to me taking his rates  
24      for guidance, but me taking his results for  
25      those particular rates when I'm reporting

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1       Manning's numbers for zero percent and five

2 percent. That's what that statement is alluding  
3 to.

4 Q. So you didn't start with those rates  
5 and then make a calculation based upon those?

6 A. I don't understand where we're going.

7 MR. ATKESON: Let me see if I can  
8 help. He, Manning, reported numbers for each of  
9 the seven entries at those interest rates. Kip  
10 had to update them. He took the numbers that  
11 Manning came up with at zero and five; he had to  
12 come up with his own numbers for three percent  
13 to update the numbers.

14 MR. YOUNG: We know what he did.

15 MR. ATKESON: There seems to be some  
16 --

17 MR. GRUENLOH: I don't understand  
18 what that paragraph says, and I can't find  
19 anybody who does.

20 THE WITNESS: I have been trying to  
21 explain it.

22 Q. One more time.

23 A. What I did is, when I present Manning's  
24 numbers, he reported numbers for zero percent  
25 and five percent, so I used those numbers. He

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

228

1 did not report results for three percent. So  
2 what this paragraph does is explain how I  
3 calculate the results that I call the Manning  
4 results for three percent. So I have a separate

5 table of Manning results. That's all it means.  
6 It doesn't mean I took as my inspiration for  
7 picking zero, three and five percent as my  
8 discount rate -- I didn't get any inspiration  
9 from Manning on that.

10 MR. GRUENLOH: Okay. Just give me  
11 about five minutes to look through what I've got  
12 left, and we'll finish up.

13

14 (Recess taken.)

15

16 Q. Have you done any studies or analysis  
17 on cigarette taxes or product demand other than  
18 what's here? By what's here, I mean what's been  
19 turned over to us.

20 A. For the state of Washington?

21 Q. In general.

22 A. I have articles on cigarette taxes,  
23 that deal with cigarette taxes.

24 Q. Can you tell me what they are so I can  
25 locate them?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

229

1 A. They are among the articles we checked,  
2 so there's one in the -- in the Tax Policy  
3 Encyclopedia.

4 Q. I thought you testified earlier that,  
5 other than what's on your CV, you had done an  
6 analysis for the tobacco -- the lawyers for the

7 tobacco industry on taxes and the demand of the  
8 product.

9 A. No, I just did a --

10 MR. LEITER: Are you referring to  
11 his Brookings article?

12 MR. GRUENLOH: Maybe that was it.

13 MR. YOUNG: He testified he had done  
14 an analysis for the lawyers on the cigarette  
15 tax.

16 THE WITNESS: No, I have never done  
17 it. I have done one on the cost of the national  
18 accord, the present value of those costs, which  
19 are comparable to an excise tax.

20 Q. Who pays excise taxes?

21 A. Well, all taxes on all products are  
22 shared between the producer and the consumer, so  
23 there's some tax shifting that goes on across  
24 both the parties.

25 Q. Whose pocket does the money come out

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

230

1 of?

2 A. It would be the consumer.

3 Q. So the tobacco industry didn't pay any  
4 of the excise taxes in Washington, did they?  
5 And I'm asking, actually pay?

6 A. Well, from an economic standpoint it  
7 doesn't matter who actually pays; it matters  
8 that there's a tax. But the taxes are paid by  
9 consumers.

10 Q. But my question is, who actually paid?  
11 A. Well --  
12 Q. Whose money -- where did the money come  
13 from?  
14 A. You can look at that one of two ways.  
15 I walk into a store and pay for cigarettes, and  
16 that's, you know, including the tax. This is  
17 money that could have gone back to the tobacco  
18 company, but by state law it goes to the  
19 convenience stores and goes to the state  
20 treasury. So the consumer is the last person to  
21 touch the money, but the tobacco company is the  
22 person that didn't get the money.  
23 Q. So is it your opinion that the tobacco  
24 industry paid for excise taxes in the state of  
25 Washington?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

231

1 A. No, my opinion is that, as in all  
2 contexts, the burden of taxes is shared between  
3 producers and consumers, so producers bear part  
4 of the tax, principally because a higher tax  
5 lowers the amount of cigarettes that they sell  
6 in the state of Washington.  
7 Q. Is that because cigarettes are price-  
8 sensitive to an increase in taxes?  
9 A. The price sensitivity leads to the  
10 decreased demand, yes.  
11 Q. And again, going back to the early

12 death -- your lifetime analysis, for a second --  
13 you have never done a lifetime analysis  
14 specifically on the Washington Medicaid  
15 population, have you?

16 A. No.

17 Q. Do you plan to do one?

18 A. No.

19 Q. Do you know what the result would be?

20 A. I have generalized my analysis for  
21 Medicaid for the state of Washington using a  
22 variety of bridge factors, but that's different  
23 than the kind of extensive analysis that is  
24 probably being undertaken in this case.

25 Q. So the answer is no?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

232

1 A. I forget the question, but --

2 Q. The question is, do you know what the  
3 result would be?

4 A. I don't know exactly what the result  
5 would be.

6 Q. And anything that you would present as  
7 far as a result on that would be a guess, then;  
8 correct?

9 A. No, it's not a guess; it's an estimate.

10 Q. An estimate based on what?

11 A. Based on the generalization of my  
12 national numbers to the state using a variety of  
13 bridge factors.

14 Q. But you haven't done the actual

15 analysis; correct?

16 A. I haven't done a separate analysis.

17 Q. For the state of Washington?

18 A. For the state of Washington, other than  
19 this bridge to the state.

20 MR. ATKESON: Just so there's no  
21 misunderstanding here, you have an article of  
22 his that has an analysis of each of the 50  
23 states; included in that is the state of  
24 Washington. Okay? But he's not going to be --  
25 we are not offering him as an expert to say that

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

233

1 the number he came to there is the right number  
2 for the state of Washington. But he's done that  
3 analysis, and that's what he's talking about  
4 when he talks about his bridge factors.

5 Q. What is the bridge you are talking  
6 about?

7 A. These are basically rough  
8 proportionality factors that I use to  
9 extrapolate the national analysis to the state.  
10 So, for example, if the nursing home utilization  
11 rate in the state of Washington was twice as  
12 great, I would double the nursing home rate. If  
13 the medical price level in the state of  
14 Washington was twice as great, I would double  
15 medical costs. So I used adjustment factors  
16 such as that.

17 Q. Do you believe that your work on excise  
18 taxes, on national excise taxes, can be applied  
19 to the Medicaid population here in this case --  
20 I'm sorry -- on your lifetime analysis, can be  
21 applied to the Medicaid population in this case?

22 A. This contains -- the conceptual  
23 framework certainly is applicable.

24 Q. Do you think you would get a reliable  
25 result?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

234

1 A. I'm just talking about the broad  
2 framework you would use. I'm not going to be  
3 framing every recalculation that they should do  
4 to calculate damages.

5 Q. Look at -- I'm looking for your  
6 cigarette tax article, Exhibit 1405. It's in  
7 section 6 on page -- I'll get the page number  
8 for you. It's page 72.

9 MR. ATKESON: Is it "Insurance  
10 Externalities of Smoking"?

11 MR. GRUENLOH: "Insurance  
12 Externalities of Smoking." That's what I've  
13 got. The page numbers are cut off.

14 MR. ATKESON: That's okay.

15 Q. Under section 6, the "Insurance  
16 Externalities of Smoking," can you read the  
17 second sentence there for me?

18 A. "States such as Mississippi and Florida  
19 are initiating lawsuits in an attempt to recoup

20 state Medicare payments."

21 Q. Is it your understanding that those

22 states were attempting to recoup Medicare?

23 A. No, Medicaid.

24 Q. Was it your understanding with respect

25 to the State of Washington that it was

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

235

1 attempting to recoup Medicare payments?

2 A. Medicaid.

3 Q. Was it your understanding at the time

4 that you wrote this that the states were

5 attempting to recoup Medicare payments?

6 A. I believe it was Medicaid. This was a

7 typo or whatever, a misstatement.

8 Q. Look on that same page about halfway

9 down, three-quarters of the way down on the same

10 page, next paragraph, the sentence that starts

11 with "moreover. " Can you read that, please?

12 A. I have no idea where we are.

13 Q. Under section 6, "Insurance

14 Externalities of Smoking." Second paragraph,

15 the middle paragraph, the sentence that starts

16 with "moreover."

17 A. "Moreover, when one is assessing these

18 externalities, it is certainly not appropriate

19 to tally only the potential adverse consequences

20 of smoking, such as the effects on Medicare or

21 health insurance costs, and to neglect

22 systematically the estimated cost savings to  
23 society."  
24 Q. By the inflection in your voice, I  
25 assume by "health insurance costs" you meant

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

236

1 Medicare there. Is that what you are referring  
2 to?

3 A. It includes private health insurance  
4 costs, too.

5 Q. But again, you used the term  
6 "Medicare"?

7 A. I used it intentionally. That's where  
8 it belongs.

9 Q. But the one up there you think was a  
10 typo?

11 A. The earlier one, it was a misstatement  
12 or a typo.

13 Q. On page 52 of that article, you refer  
14 to tobacco as a sin tax?

15 A. Some people have called them that.

16 Q. Can you tell me what you mean by that?

17 A. It may be against certain people's  
18 religion to smoke. They may view it as a  
19 religious issue.

20 Q. Is that it?

21 A. That's it. Or people may demonize  
22 smoking in certain ways. So it's behavior they  
23 don't do that's bad for others to do, so they  
24 designate it as sinful.

25 Q. Is that the popular understanding in

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

237

1 the literature, or is that just your  
2 understanding?

3 MR. ATKESON: Of the term "sin tax"?

4 A. That's how I understand it. I'm not --  
5 I have no reason to believe that I am out of  
6 step with popular opinion on this.

7 Q. Are there other reasons in the public  
8 -- in the public finance literature, given to  
9 tax goods like this other than as the sin tax?

10 A. I have not seen many public finance  
11 discussions other than my own in terms of being  
12 a comprehensive discussion, so I don't think it  
13 shows up that often in textbooks. But in terms  
14 of generic aspects for why you would want to tax  
15 any commodity, if there are costs to society or  
16 if people are making inefficient decisions for  
17 themselves, taxes can appropriately align your  
18 incentive to take corrective actions, and there  
19 is well-established literature on that.

20 Q. Are you familiar with the Ramsey rule?

21 A. I teach Ramsey pricing.

22 Q. Can you tell me what the Ramsey rule  
23 is?

24 A. It links how you divide fixed costs  
25 depending on the demand elasticity for different

1 markets.

2 Q. I'm handing you what has been marked as  
3 Exhibit 1406 to the deposition. Can you  
4 identify that?

5 A. This is a list of the cigarette taxes  
6 by the year for the state of Washington, as well  
7 as tobacco taxes of other kinds.

8 Q. Are you basing some opinion that you  
9 are going to present in this case on that piece  
10 of paper?

11 A. Yes.

12 Q. And what opinion is that?

13 A. Column one provides information on the  
14 cigarette taxes by year. And I will be relying  
15 on this information as a measure of cigarette  
16 excise taxes.

17 Q. And where did you get this information?

18 A. This was provided to me by the  
19 attorneys.

20 Q. Did you make any independent  
21 determination of whether those numbers were  
22 accurate?

23 A. I did not inspect the raw data, but I  
24 did check a number of the statistics with the  
25 data published in the Tobacco Institute's "The

1 Tax Burden on Tobacco." And at least through  
2 the first few digits, the numbers seemed to line  
3 up. Some of them lined up exactly. So there  
4 were some minor differences but no substantial  
5 ones.

6 Q. Was the publication that you used to  
7 check the numbers, the Tobacco Institute's "Tax  
8 Burden on Tobacco"?

9 A. I would not so much describe it as a  
10 check, but just to see if the numbers were in  
11 line with other published statistics.

12 Q. Are you assuming in your analysis here,  
13 in your opinion, that all of the funds  
14 represented here, all of the taxes are being  
15 earmarked for Medicaid funds spent by the state  
16 of Washington?

17 A. No. I'm just assuming they go into the  
18 state of Washington treasury.

19 Q. Do you think all of these taxes were  
20 paid by smokers who were on Medicaid?

21 A. No.

22 MR. ATKESON: Let me just -- I want  
23 to make sure. In one of his previous answers he  
24 said he was only relying on the first column,  
25 and you have been asking about all the columns.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

240

1 I don't want to shut you off with your  
2 questioning, but that may shorten it.

3 Q. The cigarette tax in the first column,  
4 excise taxes, that's the only one you are  
5 relying upon?

6 A. That's correct.

7 Q. Let me rephrase my last two questions,  
8 then, and just make them specific. As to that  
9 first column, are you assuming that all dollars  
10 in that first column were earmarked for Medicaid  
11 in the state of Washington?

12 A. I don't know how they earmarked them.  
13 I'm assuming they went into the treasury.

14 Q. So you are not assuming they have all  
15 been earmarked as Medicaid funds?

16 A. They can call them whatever they want.

17 Q. What do you call them?

18 A. I just call them net -- excise taxes  
19 reaped by the state of Washington.

20 Q. Are you assuming that all of the people  
21 that paid these taxes in the first column here  
22 were Medicaid recipients in the state of the  
23 Washington?

24 A. No.

25 Q. Tell me what your opinion is going to

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

241

1 be. Is it that these are taxes that are paid  
2 and that's it? Or will you opine that the  
3 tobacco industry should receive some credit for  
4 these taxes? What in fact is your opinion?

5 A. First of all, my opinion will be these

6 are the taxes. That's part one. Second, my  
7 opinion is that if you are trying to assess the  
8 cost to the state of Washington, you want to  
9 assess the net costs, including what you take in  
10 through excise taxes, as well as what you may  
11 pay out through other programs. So it's the net  
12 total of these costs that's the appropriate  
13 measure of damages.

14 Q. Earlier when you said that you were not  
15 going to offer an opinion on damages at all, was  
16 that relating only to your lifetime analysis,  
17 and not excise taxes?

18 A. I'm not constructing a damages estimate  
19 that you would subtract or net out from excise  
20 taxes, so I don't even have that information.  
21 If you present me with that information based on  
22 what -- the evidence presented at trial -- I  
23 would then compare the two and see whether  
24 cigarettes are paying their own way.

25 Q. Will you opine that these taxes as set

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

242

1 forth in this exhibit should be offset against  
2 whatever the state claims as damages?

3 A. Yes.

4 MR. LEITER: Referring to the excise  
5 tax column; right?

6 MR. GRUENLOH: Right.

7 A. (continuing) Yes.

8 MR. GRUENLOH: And that's under your  
9 representation that the rest of this information  
10 is not going to be used?

11 MR. ATKESON: That's correct. I  
12 mean by Doctor Viscusi. Let me just say I don't  
13 know anything about any other expert in  
14 Washington. But what Doctor Viscusi is going to  
15 testify to just involves these excise taxes, and  
16 he's going to say that these excise tax numbers  
17 should be used as an offset against whatever the  
18 damages are.

19 And again, I don't know the specific  
20 years that Washington is suing for, but that may  
21 also affect which of these years he talks about  
22 in his column.

23 Q. So this is just a general analysis you  
24 have done? You have not tailored this to the  
25 case that the State of Washington has brought?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

243

1 A. These are tailored, these State of  
2 Washington excise tax numbers. When I get the  
3 numbers at trial for both the defense as well as  
4 for the plaintiff regarding the damages, I could  
5 say, given these excise taxes, what would happen  
6 to each of these damages assessments.

7 MR. ATKESON: He may be asked on the  
8 stand by us, could he total the excise taxes  
9 between two different years, and it will come  
10 off this table. But that will depend on what

11 evidence comes into trial. It will all be out  
12 of this first column.

13 Q. The reason I ask, you start here in  
14 1955. Are you of the understanding that the  
15 State of Washington is claiming damages for the  
16 year 1955?

17 A. No, I think my understanding is that  
18 1970 is where I would be starting.

19 Q. So why did you report information from  
20 1955 to 1969?

21 A. This is the table as it was given to  
22 me, so --

23 Q. Given to you by whom?

24 A. The lawyers. I did not prepare this  
25 table.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

244

1 Q. The lawyers prepared this table?

2 MR. LEITER: Let's be clear, because  
3 this is all in the record. The table was  
4 prepared by Kovarik and Kuhn, who have been  
5 listed as witnesses in this case. They prepared  
6 the table. That's been disclosed to the state.  
7 They provided it to counsel; counsel provided it  
8 to Doctor Viscusi. But the counsel did not  
9 prepare the table.

10 Q. You didn't have any part in preparing  
11 this table?

12 A. None whatsoever.

13 Q. Are these nominal dollars or are you  
14 going to inflate them in any way?  
15 A. They are nominal dollars. How we  
16 handle inflation would depend on what the  
17 specific rules are in the State of Washington.  
18 If the court rules that we are supposed to  
19 update things for inflation, and if they gave me  
20 a price index to update things, I will use it.  
21 But I have no plans to update this for inflation  
22 at this time.

23 Q. You will be relying upon the court to  
24 tell you, and you don't have a rate of your own?

25 A. Whatever the rules are in Washington.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

245

1 I don't know if there are any rulings applying.  
2 But right now I have no plans.

3 MR. LEITER: Just so we are all  
4 clear -- I don't know if you folks are involved  
5 day to day in the case -- there is a motion  
6 pending before the court on the appropriateness  
7 of using a discount rate in Doctor Harris's  
8 calculations, and presumably we will get a  
9 ruling on that motion which will provide some  
10 guidance to both sides.

11 Q. Is there some rate which you believe to  
12 be the proper rate here?

13 A. Of general inflation?

14 Q. Yes.

15 A. The general inflation would be the CPI,

16 is probably the best estimate of the general  
17 inflation rate.

18 Q. What's that right now?

19 A. It's low. Two percent, somewhere in  
20 that range, three percent, two to three  
21 percent.

22 Q. Is that the rate that you would apply  
23 to these numbers if the court asked you to come  
24 up with a number?

25 A. It depends on whether the State of

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

246

1 Washington mandates that a specific price index  
2 series be used, so it could be the CPI, the GDP  
3 deflator. There's a lot of --

4 Q. I'm not asking what the rules require.  
5 I'm asking you what you would apply.

6 A. For the general benefit to the State of  
7 Washington, I would use the CPI.

8 Q. So around two percent?

9 A. It varies by year. We have some real  
10 big heavy hitters around 1980, so we have double  
11 digit inflation for some of these years.

12 Q. Is there anything else that you would  
13 do to adjust these numbers to present value  
14 other than applying that rate for inflation?

15 MR. ATKESON: Or what the court  
16 tells him. I assume that's a predicate of part  
17 of your question.

18           A.     The rate of inflation will put it in  
19     today's purchasing power.  If the court rules  
20     that it's also appropriate to give the state of  
21     Washington credit for interest they would have  
22     made on it, I will follow whatever guidelines  
23     they have for that.

24           Q.     That was a poorly worded question.  I  
25     apologize.  Let's get rid of what the court

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

247

1     decides.  I'm asking you your opinion as to the  
2     proper rate to be applied.  You have told me the  
3     CPI.  In your opinion, notwithstanding anything  
4     the court would do, would you do anything else  
5     to bring these numbers to present value?

6           A.     It depends on what your objective is.  
7     Typically in economic damages cases, I take past  
8     losses and apply them to present value, only  
9     correcting for prices to put it in today's  
10    purchasing power.  If I want to give investor --  
11    investment interest they could have earned --  
12    you would use interest rates.

13          Q.     Which is the appropriate way to do  
14    here?

15          A.     A lot depends on what the state is  
16    trying to achieve or what you are trying to  
17    compensate the cigarette industry for.  So the  
18    value of the money that was paid in 1970 is  
19    certainly greater in today's money than 35  
20    million dollars, and if you had that 35 million

21 dollars to invest in a riskless rate of return,  
22 it would have been worth more. If you had that  
23 35 million dollars in purchasing power, it would  
24 be worth more. So they are answering different  
25 questions.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

248

1 Q. If you're going to attempt to do an  
2 offset calculation with these numbers, shouldn't  
3 you be using only those numbers that have been  
4 earmarked or used for Medicaid?

5 A. No. Let's say we live in -- imagine  
6 two different scenarios. Scenario one, the  
7 state says, "I am going to call these Medicaid  
8 cigarette taxes." Then I do the offset,  
9 presumably. Scenario two, "I am going to call  
10 these something different. I'm going to call  
11 these highway taxes." I will put them in the  
12 highway trust fund. It doesn't matter what you  
13 call them or what account you put them in once  
14 the money arrives.

15 The key thing is this money came  
16 from cigarettes, came to the state treasury, and  
17 how the state chose to dispose of this money  
18 after it got the money doesn't even matter. So  
19 let's say in 1997 the total cost of Medicaid to  
20 the State of Washington was only one million  
21 dollars. You certainly wouldn't take 257  
22 million dollars and put it in the Medicaid

23 program. That wouldn't make any sense.

24 So from my standpoint the key thing  
25 is that this is a tax on cigarettes, and that's

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

249

1 all that matters. How you designate it, how you  
2 label it, is irrelevant.

3 Q. And anyone, in doing that offset, you  
4 are going to be offsetting only that which the  
5 state has claimed in their damages; correct?  
6 For instance, if the state's damage claim is  
7 only based upon monies paid out in the Medicaid  
8 program, that's all you are going to be doing  
9 the offset against; correct?

10 MR. ATKESON: Objection. Are you  
11 asking, are we going to be asking for a refund?

12 Q. I'm asking if you are doing an offset  
13 based upon what the state is claiming.

14 A. I'm assuming the state is going to  
15 claim the net financial cost. I'll subtract the  
16 offset from that. If the offset is above that  
17 amount, then the cigarette industry owes the  
18 state nothing.

19 Q. What is the net financial cost? Can  
20 you define that for me?

21 A. The net financial cost is the excise  
22 taxes minus the absolute cost of cigarettes,  
23 reversing the signs, because the excise tax is  
24 positive. So you want to net out the excise tax  
25 from your cost figure.

1 Q. But when you said net financial cost,  
2 what is your understanding of what's going to be  
3 included in the net financial cost?

4 A. As I indicated earlier, I don't know  
5 the entire scope of the claim. I assume  
6 Medicaid is involved. Whatever financial costs  
7 the state wants to try and seek, I assume that  
8 they are including them in the claim. Once you  
9 get all these costs together, you then give the  
10 cigarette industry credit for what they have  
11 already paid, and you figure out what the  
12 difference is.

13 Q. What percentage of these excise taxes  
14 has been earmarked for Medicaid in the state of  
15 Washington; do you know?

16 MR. ATKESON: Asked and answered.

17 A. I don't know that, and I don't think it  
18 matters.

19 Q. Let me ask you to turn to page 95 of --  
20 I believe it's in this one -- page 95 of your  
21 taxation article, 1405. Under the appendix, you  
22 have the following sentence: "In doing this  
23 they created a nonsmoking --

24 A. Where? Page 95?

25 Q. In the appendix, in the first

1 paragraph. "In doing this, they created a  
2 nonsmoking smoker," in quotes, "stylized  
3 individual for use in their analysis." What's a  
4 nonsmoking smoker?

5 A. That would be an individual with the  
6 demographic profile of a smoker who didn't  
7 smoke.

8 Q. Can you explain generally how you did  
9 that?

10 A. I didn't do it; they did it.

11 Q. How did they do it?

12 A. So you would want to take the age,  
13 race, educational level and other attributes of  
14 a smoker, turning off the smoking variable, then  
15 analyze what effect it had on whatever you were  
16 interested in.

17 Q. Did you use this approach or adopt this  
18 approach?

19 A. I adopted their limits, which are based  
20 on that approach.

21 Q. Did you find that approach a reliable  
22 way of doing it?

23 A. I think that that's a reasonable way to  
24 do it, yes.

25 Q. A scientifically valid way of doing it?

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

1 A. Yes.

2 Q. Do you think that using this nonsmoking  
3 smoker methodology yielded an accurate result?

4 A. I know of no bias in it. I don't know  
5 what the true result is. And as I indicated  
6 four or five hours ago, with better data you can  
7 always get more accurate results.

8 Q. With more data, you can always get  
9 accurate results, or just better?

10 A. More and better data are both good.  
11 More data is always better than less. Better  
12 data is always better than worse data.

13

14 (Recess taken.)

15

16 Q. Who is a non -- what is the nonsmoking  
17 smoker? Whose analysis was that?

18 A. Manning and colleagues.

19 Q. As a policy analyst, you have to factor  
20 in all of the potential ramifications of your  
21 policy; isn't that correct?

22 A. The important costs and benefits, yes.

23 Q. Not just the costs and benefits, but  
24 all the ramifications, isn't that correct? Not  
25 only the economic costs, but the social

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

253

1 ramifications?

2 A. I count social things as economic. I  
3 don't draw a distinction.

4 Q. Have you done that with respect to your  
5 opinion that children overperceive the risk of  
6 smoking?

7 A. This is not a social benefit-cost  
8 analysis. My opinion is focusing solely on risk  
9 perception, and I'm only focusing on the factual  
10 evidence based on the surveys.

11 Q. But you have opined that children  
12 overperceive the risks of smoking?

13 A. I haven't opined that. I have given  
14 survey evidence or presented survey evidence on  
15 that issue. That's not a hypothesis.

16 Q. So that's not your opinion?

17 A. It's a conclusion based on empirical  
18 work, but it's not an opinion in the sense of,  
19 you know, do I like chocolate, which would be  
20 strictly an opinion.

21 Q. What about with respect to your opinion  
22 that the tobacco industry would decrease the  
23 perception of risk if they disclosed all of  
24 their information? Have you looked at all of  
25 the social ramifications that may be present

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

254

1 there?

2 A. Well, first of all, my opinion was that  
3 if people had accurate knowledge, people would  
4 have lower perceptions of the risk. And from  
5 the economic standpoint, you improve social  
6 welfare if people have more accurate risk

7 beliefs to base their decisions on.

8 Q. So you are assuming if the tobacco  
9 industry did disclose all of their information,  
10 that would then give consumers an accurate  
11 picture of risk?

12 A. No, I'm just saying if consumers had  
13 full information, complete information, that  
14 they would have lower risk perceptions than they  
15 do now.

16 Q. Because they don't have accurate  
17 information now?

18 A. Well, they live in a very strong  
19 antismoking environment. That's not the same as  
20 providing information, and the result is that  
21 they overperceive the risks.

22 Q. So they don't have accurate information  
23 now?

24 A. They have information as well as  
25 persuasion and a lot of antismoking crusading

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

255

1 efforts that are going to affect their risk  
2 perceptions. So it's not simply reading an  
3 article about what the Surgeon General said  
4 that's going to affect their risk beliefs.

5 Q. Is it your opinion that if the tobacco  
6 industry disclosed all of the information that  
7 they may have to the public, that consumers  
8 would then have more accurate information than

9       they do now?

10       A.     I'm certainly of the opinion that

11       consumers could not process all of the

12       information that the tobacco industry has.  I

13       don't believe the consumers can process all the

14       information that's in any given Surgeon

15       General's report.  So I think inundating

16       consumers with files from the tobacco industry

17       is certainly not going to foster accurate risk

18       perceptions.

19       Q.     What about with respect to your opinion

20       that the state saves money as a result of the

21       early death of smokers, your lifetime analysis?

22       Have you looked at all of the ramifications, the

23       potential ramifications of that policy or that

24       opinion?

25       A.     Give me some.

MAHANEY REPORTING SERVICES  
Tel. (617) 542-4207

256

1       Q.     Why don't you give me some?

2               MR. ATKESON:  This isn't going to

3       get very far.

4       A.     I don't think the state should be

5       filing these lawsuits at all, so I think you are

6       starting in the wrong place with me.

7       Q.     You don't think there are any

8       ramifications of that policy?

9               MR. ATKESON:  What policy?

10       A.     I don't this --

11       Q.     The lifetime analysis.

12           A.     I am opining that the lifetime analysis  
13     is the proper approach in the case. The main one  
14     is that you are calculating costs correctly;  
15     that's the main ramification.

16                     MR. ATKESON:  He -- this is opining  
17     on whether or not the state should encourage or  
18     discourage the sale of cigarettes?

19           A.     (continuing) I am opining that the  
20     state should do the calculations honestly and  
21     accurately.  That's my only concern.

22           Q.     Have you factored in how that might  
23     affect the deterrence factor, let's say not only  
24     in the cigarette industry, but manufacturers all  
25     over, regarding their conduct?  Have you

1     factored that in?

2                     MR. ATKESON:  Factored it into  
3     whether or not the state could honestly account  
4     for costs?  That's what he is referring to.  
5     You're not telling us what you are referring  
6     to.

7           Q.     The conduct of other manufacturers,  
8     your lifetime analysis here regarding cigarettes  
9     could have an effect upon them, couldn't it?

10          A.     Assessing costs for past conduct  
11     generally won't have an effect on future  
12     conduct, because it's the incentives for future  
13     behavior that affect future conduct.  These are

14 penalties on past actions, so these are like  
15 lump sum taxes.

16 Q. So other manufacturers wouldn't look at  
17 it and say, "Well, they got away with it, so  
18 can't we?" It doesn't work that way?

19 A. You are saying people will anticipate  
20 the spread of these lawsuits to other products?

21 Q. No, I'm just asking you a question.  
22 Could other manufacturers develop that policy,  
23 based upon what's going on here, your analysis?  
24 The policy of, "They got away with it, so can  
25 we"?

1 A. Nobody is getting away with anything.  
2 All I'm saying is when you do the cost  
3 calculations, do them honestly and correctly.  
4 If your position is that you should lie when you  
5 do the calculations and do them incorrectly  
6 because of some higher good, I think that's  
7 wrong. I favor a complete, accurate and honest  
8 accounting and let the chips fall where they  
9 may, but don't lie about what the numbers are  
10 because you think you are advancing a social  
11 objective or some legal objective. Tell the  
12 truth.

13 MR. GRUENLOH: I think that's it.
